RESOLUTION ON THE ANNUAL REPORT ON THE POLICE ADMINISTRATION OF THE TOWN OF CALCUTTA AND ITS SUBURBS FOR THE YEAR 1893.

POLICE.

Dated Darjeeling, the 28th June 1894.

RESOLUTION No. 1203J.—D.

READ—

The Annual Report on the Police Administration of the Town of Calcutta and its Suburbs for the year 1893.

Read also—

The Reports for the two preceding years and the Resolutions recorded by Government thereon.

SIR JOHN LAMBERT, K.C.I.E., was in charge of the Police of the Town of Calcutta and its Suburbs throughout the year except for the period from the 16th July to the 25th October, when Mr. A. H. Giles officiated for him. Mr. A. B. Barnard continued to hold the office of Deputy Commissioner until the 22nd March 1893, from which date he was granted furlough for one year. During his absence Mr. H. E. C. Paget acted for him as Deputy Commissioner.

	1892.	1893.
Town	48,569	47,765	36,552
Suburbs	11,871	11,472	11,242
Total ...	60,440	59,237	47,794

The decrease of 11,213 offences reported in the Town is the most noteworthy feature in the year's report. In the Suburbs the decrease was only 230—a difference which does not require explanation. The number of cognizable offences under the Penal Code reported in the Town and Suburbs together decreased by 935, and of non-cognizable offences under the same Code by 964. There was a decrease of 6,648 in miscellaneous cognizable offences, chiefly under the Hackney Carriage Act and in street offences under the Police Act, and of 2,896 in miscellaneous non-cognizable offences, which occurred wholly in municipal prosecutions. The reasons for the decrease under the various heads of crime will be more fully discussed hereafter in dealing with the cognizable and non-cognizable offences reported as true in the Town and Suburbs respectively.

3. The following table shows separately the number of cognizable and non-cognizable cases tried during the past two years in the Town and Suburbs—

1	2	3	4	5	6	7
	Cognizable cases.		Non-cognizable cases.		Decrease.	
	1892.	1893.	1892.	1893.	Cognizable.	Non-cognizable.
Northern Division Court (Presidency Magistrate)	14,352	9,974	535	359	4,378	166
Southern Division Court (Chief Presidency Magistrate) ...	11,276	9,070	449	68	2,206	381
Bench Court (Honorary Magistrates)	1,724	800	8,243	6,660	924	1,583
Total for town ...	27,352	19,844	9,227	7,097	7,508	2,130
Suburbs ...	6,890	6,677	2,595	1,829	213	766

The total number of cases tried in the Town and Suburbs during the year was 35,447, of which 29,112 ended in conviction. The number of cognizable cases tried in the Town was 19,844, and of these 17,899 ended in conviction in the Magistrate's Court, and 37 in the High Court. In the Suburbs, out of 6,677 cognizable cases tried, 6,299 resulted in conviction before Magistrates and 14 before the Court of Sessions. These results are very satisfactory, and reflect credit on the work of the Police during the year. The total number of arrests under all heads in the Town and Suburbs fell from 46,731 to 35,981, and the ratio per cent. of convictions to arrests from 93·92 to 91·26. The decrease in arrests occurred wholly under minor heads, chief among which are public and local nuisances under section 283, Indian Penal Code, miscellaneous offences under the Hackney Carriage Act and the Ports Acts, and street offences.

4. *False cases.*—Seventy-one false cases were brought in the Town and 28 in the Suburbs, against 62 and 27, the corresponding figures for 1892. Out of 19 prosecutions instituted in the Town under the Penal Code, 6 ended in conviction; in 6 the accused were discharged, and 6 were struck off owing to the failure of the parties to appear. In the Suburbs prosecutions under the Penal Code were instituted in 10 cases, in 5 of which the accused were fined and in 5 discharged. Rupees 332 were awarded as compensation, under section 552, Criminal Procedure Code, in 35 cases in the Town, and Rs. 74 in 8 cases

in the Suburbs. The average compensation awarded in each case thus amounted to hardly more than Rs. 9.

5. *Property stolen and recovered.*—The value of property stolen in the Town and Suburbs during the year was Rs. 1,27,776, of which Rs. 92,938, or 72·73 per cent., was recovered. The results of the year in this respect are remarkably good, and the percentage of property recovered is higher than it has been in any preceding year.

6. *Cognizable offences in the Town.*—The number of true cognizable cases reported within the Town fell from 28,472 to 21,232. The decrease of 7,240 as compared with 1892 occurred chiefly in offences in class VI, under the heads "Other offences" and "Special and local laws," the falling off in these being 3,407 and 3,969 respectively. There were 860 cases under the Hackney Carriage Act, being a decrease of 2,359 cases as compared with last year. The decrease is explained by the change in the law, under which summary arrests are no longer made for these offences, the procedure by summons having lessened the number of prosecutions. No corresponding increase, however, is observed among the non-cognizable cases in the returns. The number of offences under the Police Act (street offences and nuisances) fell from 10,037 to 7,086, being a decrease of 2,951, which occurred chiefly in cases of "obstruction" and "leaving carriages without control." No explanation of the decrease has been given in the Report, but the Lieutenant-Governor has since been informed that it is due to the issue of orders to the police to use their power under the Act with greater discretion, as it was one of the alleged causes of the hackney carriage strike which occurred on the 23rd January 1893, that the police were too ready to arrest drivers of carriages for petty street offences. The results of the prosecutions in these cases are satisfactory, and out of 8,582 persons placed before the Magistrate, 8,479, or over 98 per cent., were convicted. The decrease of 233 offences under the Shipping Act and of 340 under the Ports Acts has not been explained in the Report, but it is doubtless due to the fact that there were fewer European sailors and fewer ships in the port. There was a decrease of 456 in the number of cases and of 775 in the number of persons arrested under the Cruelty to Animals Act, which is said to be due to the action of the Commissioner of Police, after the hackney carriage strike of January 1893, in warning agents of the Society for Prevention of Cruelty to Animals to be more careful in making arrests under the Act. Of the 5,257 persons arrested for cruelty to animals, 5,052, or over 96 per cent., were convicted.

7. The Commissioner of Police has given detailed information in his report regarding the various crimes committed during the year, and the Lieutenant-Governor does not consider it necessary to discuss them at any length. There were 11 cases relating to coin against 5 in the preceding year, but only one of these was of any importance, and in this two Muhammadan accused, father and son, were sentenced by the High Court to two and five years' rigorous imprisonment respectively for fraudulent delivery of counterfeit Queen's coin and being in possession of instruments for coining. Out of nine cases of murder, in two the accused were convicted, one of them being sentenced to death and the other to transportation for life. In one case the Coroner's jury returned a verdict of murder, but the Police Surgeon, after a careful enquiry, came to the conclusion that the case was one of suicide. There were two cases of attempt at murder, one of which ended in the conviction of the accused, who was sentenced to ten years' rigorous imprisonment. Of the two cases of culpable homicide, in one the accused was sentenced to five years' rigorous imprisonment, and in the other he was discharged, as the Magistrate found that the death was due to heart disease, the condition of the deceased being such that a very trifling injury would have proved fatal. The number of cases of grievous hurt rose from 31 to 35, and out of 44 persons placed on trial in these cases, 24 were convicted. There were 13 cases of kidnapping compared with 14 in 1892 and an average of 17 in the five preceding years. One important case under section 372, Indian Penal Code, was instituted, in which a woman and two men were charged, at the instance of the leaders of the American Missionary Society in Calcutta, with selling a minor for the purposes of prostitution. The defendants were, however, discharged in the High Court, the

presiding Judge holding that to complete the offence punishable under section 372, Indian Penal Code, proof of a continuous letting or hiring for an unlawful or immoral purpose was required, and that the single act said to have been committed by the accused was not sufficient to warrant their being placed on trial. Fifteen persons, who were charged with abducting girls from 7 to 14 years of age from the Midnapore district, were arrested and transferred to that district for trial. All were convicted and sentenced to from two to eight years' rigorous imprisonment. There was one daring case of robbery with hurt, in which two Madrasis were set upon by five up-countrymen and were robbed of Rs. 1,755. All the accused were convicted, four being sentenced to seven years' imprisonment each, and the fifth, a lad, to four years' detention in a Reformatory. There was one case of highway robbery in which three Eurasians were charged, two of them being sentenced to two years' imprisonment each, and one to imprisonment for one year. The number of true cases of burglary and lurking house-trespass rose from 106 to 135, and the number of persons convicted from 97 to 117. The percentage of property recovered to property stolen in these cases shows a satisfactory increase from 60·13 in 1892, and an average of 51·63 in the four preceding years, to 73·24. The number of thefts reported as true was 1,578, and the number detected was 948, being an increase of 196 and 75 respectively as compared with 1892. The increase occurred wholly in petty house-thefts, and is attributed to the unusually large number of wandering thieves from the Upper Provinces who visited the town. The number of persons convicted in these cases was 1,019, which is higher than in any previous year, and the percentage of property recovered was 73·01 against 74·57 in 1892, and an average of 62·49 in the four preceding years. These results are very creditable to the Police.

8. *Non-cognizable offences—Town.*—The total number of offences reported as true under the Penal Code was 4,464, and under special and local laws 10,804, being a decrease of 755 and 3,239 respectively as compared with 1892. There was a decrease of 3,156 prosecutions under the Municipal Act, chiefly under section 90, and the falling off is said to be due to the fact that a large number of prosecutions in license cases were withdrawn by the Municipal authorities on the defaulters paying their fees. It is not, however, stated that any change took place in the instructions under which the municipal servants acted, and it is noticeable that in the Suburbs there was an increase of 458 in the number of prosecutions under section 90, and of 415 under all sections of the Municipal Act taken together. Prosecutions of this kind are not a desirable way of collecting the taxes, and the decrease noted in the town must be considered as satisfactory provided it is not due to laxity in collecting. Most of the offences in which the decrease has occurred are fiscal, and they ought to continue to diminish with good administration of the municipal taxation, and if severe punishments are meted out to defaulters.

9. *Cognizable offences, Suburbs.*—The number of these offences fell from 7,085 to 6,733, the decrease of 352 occurring chiefly in cases of house-breaking and theft, and in prosecutions under the Hackney Carriage Act for the reasons already explained. There were five cases relating to coin, in one of which two accused were sentenced to seven and two years' imprisonment respectively for being found in possession of instruments and materials for counterfeiting coin. There were seven cases of murder, in two of which the defendants were discharged for want of evidence, and in a third the murderer committed suicide. In a fourth case the person suspected has so far managed to evade arrest, and in the three remaining cases no trace of the murderers can be found. There were two cases of attempt at murder, in one of which the accused was sentenced to transportation for life, and in the other, which was that of a life-convict who attempted to murder a fellow-prisoner in jail, the accused was sentenced to be hanged. In a case tried before the Sessions Judge of Alipore two women were charged with kidnapping and selling, and a third with buying or hiring, a girl of about 12 years of age for an immoral purpose. All three accused were convicted and sentenced to seven years' rigorous imprisonment each. While the number of true cases of burglary and lurking house-trespass reported fell from 91 to 76, which is lower than in any previous year, the ratio of cases detected and of persons convicted is unusually high, the number having risen from 49 and 53 in 1892 to 54 and 67 respectively. The number of thefts fell

from 446 to 417, but the number of cases detected and of persons convicted rose from 294 and 321 in 1892 to 312 and 338 in 1893. As in the case of burglaries, these figures are very satisfactory, and reflect credit on the working of the Suburban Police

10. *Non-cognizable offences, Suburbs.*—There were 4,481 cases against 4,368 in 1892. There were five cases of forgery and one of extortion, but these were all unimportant and call for no special remark.

11. *Suicides and accidental deaths.*—There were 69 cases of suicide in the Town and 33 in the Suburbs, making a total of 102 cases as compared with 87 in 1892. Of the total number of suicides during the year, 34 per cent. were caused by hanging and 45 per cent. by opium-poisoning. The number of accidental deaths was 349 as against 276 in 1892. Of these deaths, 32 were those of persons run over and killed by vehicles, but no case occurred in which there was evidence of rashness or negligence. Thirty-eight persons were prosecuted for rash and furious driving, and of these 34 were convicted.

12. *European Vagrancy Act.*—Fifty vagrants were admitted into the Government Work-house during the year, one was received from Muzaffarpur under section 6, and 4 were in the Work-house at the close of the preceding year, making a total of 55 admissions, or a decrease of 5 as compared with 1892. Of these, 16 were discharged on obtaining employment, 9 were released under the first clause of section 16 of the Act, and 5 were deported from British India. Four inmates of the Work-house absconded and 6 were imprisoned, while 8 remained in the Work-house at the close of the year.

13. *Fire-Brigade Act.*—The steam fire-engines of the Brigade were in attendance at 28 fires compared with 34 in 1892. There were 20 other petty fires also, at which assistance was rendered by the manual engines stationed at the out-stations. The total value of the property destroyed by these fires is estimated at Rs. 6,10,521 as compared with Rs. 12,95,045 in 1892, but the latter figures do not include the value of the cargo destroyed on the ship *Dumbarton Rock*, which was estimated at several lakhs. Six of the fires, in which property to the value of Rs. 4,53,744 was destroyed, occurred in steamers or godowns in which jute was stored. No fire during the year was attended with the loss of human life.

14. *Constitution of the Police force.*—The total strength of the force was 2,873, or the same as in 1891 and 1892. The number of casualties was 241 and the percentage 8·38, the figures being the same as in the previous year. The number of deaths fell from 26 to 25, and the ratio per mille from 9·49 to 8·70. The total cost of the force was Rs. 6,18,681, being a decrease of Rs. 12,086 as compared with 1892.

Owing to the abnormal rainfall of the year and the general unhealthiness of the season, the daily average number of men in hospital rose from 88·36 in 1892 to 100. The Commissioner of Police reports that this, added to the rise in the price of food-grains which induced many of the constables to stint themselves for the sake of their families, and thus injuriously affected their health, rendered it often difficult to maintain an effective night watch. Towards the close of the year the Government sanctioned a batta allowance of Rs. 1-8 per mensem for the men stationed in the most unhealthy Suburban tracts, and in some instances it was found necessary to recruit these tracts by the transfer to them of constables from the town force. Considering the difficulties with which they had to contend, the good results of the work done by the Calcutta Police during the year are all the more creditable to them, and Sir Charles Elliott is glad to receive the assurance of Sir John Lambert that their duties were carried out cheerfully and without complaint.

15. *Rewards.*—Rupees 3,242-12 (of which Rs. 864 were paid by individuals) were disbursed as rewards in the Town and Suburbs during the year. No details have been given in the report as to who received these rewards and the number of persons rewarded, and the Lieutenant-Governor desires that in future reports this information may be supplied. It has been ascertained that the total number of persons rewarded in 1893 was 449, of whom 258 were constables, 4 were special constables, 1 was a sowar, and 116 were informers, the remainder being officers of the force.

16. *Anthropometry.*—The anthropometrical system for the identification of habitual offenders was introduced into Calcutta at the commencement of the

year, and before its close the measurements of 695 men were taken, of whom 490 were known to the police as habitual offenders, and 205 were strangers who had been arrested on charges of offences against property. The number of persons marked down on the registers for police surveillance at the close of the year was 595, and all of these should be measured. Sir Charles Elliott is glad to hear that the system has already proved of practical use, and that previous convictions against six men, who had been convicted in districts beyond Calcutta, were traced by its means.

17. *Judicial work.*—Mr. Marsden held the office of Chief Presidency Magistrate throughout the year except for the period from the 19th September to the 14th December, during which Mr. Pearson officiated for him. Nawab Syud Ameer Hossein, C.I.E., was in charge of the Magistracy of the Northern Division until the 17th May, when he was appointed to officiate as Inspector-General of Registration. During his deputation the Hon'ble Maulvi Abdul Jubbar, Khan Bahadur, held the office of Presidency Magistrate, Northern Division, until the 27th December, when Nawab Syud Ameer Hossein again resumed charge.

18. *Court of the Chief Presidency Magistrate.*—The number of cases instituted during the year in the Court of the Chief Presidency Magistrate was 10,431 as compared with 13,107 in 1892, and in these 13,279 persons were concerned. Of this number, 12,289 persons were convicted, 30 were committed to take their trial at the High Court, 928 were acquitted or discharged, and 22 remained under trial at the close of the year. The number of persons charged under the Penal Code fell from 5,983 to 4,658, and under the Merchants' Shipping Act from 583 to 326. Out of 2,942 persons prosecuted for cruelty to animals, 2,779 were convicted. The percentage of convictions shows an improvement as compared with last year, and the Lieutenant-Governor is glad to notice that the complaint made by the Chief Magistrate in his report for 1892, that such prosecutions are often unnecessarily instituted, has not been repeated. The total amount of fines imposed was Rs. 21,599-0-3, of which Rs. 21,138-8-3 were realized. Appeals were preferred to the High Court against the order of the Chief Magistrate in 35 cases, with the excellent result that in every case the appeal was rejected. The High Court was moved to set aside the orders of the Magistrate in six cases, and in one of these the conviction was reversed, and in another a fresh trial was ordered. In 11 cases declared false by the Court, a sum of Rs. 125 was granted as compensation to the 12 persons accused. Fuller details should, however, have been given, and the number of cases in which compensation was ordered under section 560, Criminal Procedure Code, should have been specified, and the amount so granted separately shown.

19. *Northern Division Court.*—In this Court the number of cases instituted during the year fell from 17,545 to 12,660, and of persons put on trial from 21,121 to 14,602. Of this number, 13,542 were convicted, 33 were committed to the sessions, 1,017 were acquitted, and 6 were pending trial at the close of the year. The results of committals to the sessions were satisfactory, and out of the 33 persons committed, 24 were convicted, 6 were discharged, and 3 were awaiting trial at the close of the year. Twenty cases against 26 persons were declared by the Court as false. In 10 cases Rs. 123 were paid as compensation to the accused under section 552 of the Criminal Procedure Code, and Rs. 14 in two cases under section 560 of the Criminal Procedure Code. The results of appeals preferred to the High Court are satisfactory, and out of 90 orders appealed against 88 were upheld and only 2 were set aside. The High Court was moved in 26 cases, in 14 of which the rules were refused or discharged, in 3 the orders were modified, in 6 retrial was ordered, in 1 a sentence of discharge against four persons was set aside and the case ordered to be committed to the sessions, and in the remaining 2 cases the orders granting compensation were reversed. The total value of the fines imposed during the year was Rs. 21,281-12, of which Rs. 19,017-12 were realized.

20. In his Resolution on last year's Report, in reviewing the work of the Northern Division Court, the Lieutenant-Governor remarked that the large number of persons against whom processes were issued, and the small number who appeared in Court, seemed to indicate a want of sufficient care in issuing

such processes and in enquiring into complaints beforehand. The Magistrate of the Northern Division explains that this is not necessarily the case, as in the majority of prosecutions of a petty nature the prosecutor either settles the matter out of Court, or else he withdraws the case in the presence of the Court on the defendants undertaking not to repeat the offence with which they are charged. The Lieutenant-Governor recognizes the force of this contention, but he cannot accept it as an altogether satisfactory explanation of the large proportion of processes issued to persons appearing in the Northern Division Court. From the figures noted in the margin, it would appear that there is a considerable amount of useless process-serving, and that this is especially the case in the Court of the Magistrate of the Northern Division. In this Court 189 processes were issued against persons charged with cheating under sections 417 to 420 of the Penal Code, and 82 persons actually appeared before the Court, of whom only two were convicted. The offences under these sections are not compoundable, and the figures seem to show that there is something wrong in connection with the issue of processes in this Court. The Magistrate observes that he nearly always refuses applications for processes in cases of assault and hurt, unless the applicant is a respectable man or shows marks of violence. The Lieutenant-Governor notices, however, that not a single complaint under these or any other section is shown in the column provided for the purpose in the statement annexed to the report as having been dismissed under section 203, Criminal Procedure Code, and the same is the case with the Courts of the Chief Magistrate and the Bench Courts. It can hardly be that process was issued on every complaint lodged, and yet this would appear to have been the case from the report now submitted to Government. No distinction also is made in the reports of the Presidency Magistrates between the results of cases sent up by the police and of those of which cognizance is taken by the Courts '*suo motu*' or on complaint. For the former the Commissioner of Police is responsible, but in the latter the responsibility rests with the Magistrates by whom process is issued, and His Honour desires that in future reports the results of these different classes of cases may be separately shown.

Court.	Persons against whom processes issued.	Persons who appeared.	Percentage of persons appearing to processes issued.
1	2	3	4
Chief Magistrate ...	1,557	721	46·3
North Division ...	4,293	937	21·8
Bench Courts ...	11,321	7,193	63·5
Total ...	17,171	8,851	51 5

21. The Lieutenant-Governor further observes that no information has been furnished regarding the adjournment of cases and the detention of witnesses in the various Courts. The Chief Presidency Magistrate has given a table which shows that only 34 cases were adjourned by the Bench Courts, but no reference is made to the number of adjournments either in the Chief Magistrate's Court or in that of the Magistrate of the Northern Division. From paragraph 35 of Sir John Lambert's report it appears that the total number of cases adjourned before the Northern Division Court has risen from 131 to 227, and before the Chief Presidency Magistrate from 121 to 187, notwithstanding the fact that the number of cases tried by each Court has decreased. Some reference to these adjournments and to the reasons for the increase should have been given in the Report. In regard to the detention of witnesses, the Lieutenant-Governor believes that the Presidency Magistrates are required to maintain a register of all witnesses examined, and to report the number, together with other statistics, to the High Court; but in his opinion they should also be required to keep up the Witness Register in the form prescribed by the High Court, which is maintained in all Subordinate Courts in the mufassal. This subject will be separately considered.

22. *Work of the Honorary Magistrates.*—The number of cases other than municipal transferred to the Bench of Magistrates was 1,060, and 852 were transferred to Honorary Magistrates sitting singly, making a total of 1,912 as compared with 2,709 in the previous year. Of the total number of cases instituted, 1,582 as compared with 1,689 in 1892 were under the Penal Code, 35 as compared with 51 were miscellaneous cases under the Criminal Procedure Code, and 295 as against 969 were offences against local laws. Of these cases,

156 were struck off without trial, and in the remainder 2,600 persons were implicated, of whom 1,204 were acquitted or discharged (including those in cases which were compromised or in which the parties were absent), 1,392 were convicted, and 4 were awaiting trial at the close of the year. The total amount of fines imposed was Rs. 6,125-11, of which Rs. 5,176-8 were realized. Eleven cases were declared false, frivolous or vexatious, and in these compensation to the extent of Rs. 106 was awarded. Out of 21 appeals preferred to the High Court, 12 were rejected, and in one case the conviction was upheld, although the sentence was reduced. Out of 5 cases in which the High Court was moved, in one only was the order set aside.

23. The Lieutenant-Governor is glad to observe that the Chief Presidency Magistrate is once more able to bear tribute to the excellent work done by the Honorary Magistrates during the year, and to the great assistance rendered by them to the administration of justice. The complaint that has repeatedly been made in former years, of irregularity of attendance, has not been repeated; but the Lieutenant-Governor notices that several Honorary Magistrates are still very negligent in this respect, and that some during the past year have failed to attend on repeated occasions when invited to do so. In aggravated cases the Honorary Magistrates should be called upon for an explanation of their continued absence. The number of Magistrates who attended one or more sittings of the Bench rose from 86 to 94, and the average number of sittings per Magistrate was 11·6 as compared with 11·7 in the preceding year.

24. *Municipal prosecutions.*—The total number of prosecutions was 10,121, as against 13,253 in 1892, the decrease of 3,132 occurring chiefly in license prosecutions. The number of cases brought to trial was 5,707, and in these 3,051 resulted in the acquittal or discharge of the accused, the number of persons convicted being 2,656. The total value of the fines imposed was Rs. 13,288-13, of which Rs. 10,659-3 were realized.

25. The Lieutenant-Governor notices with satisfaction the favourable mention made by Sir John Lambert of Mr. H. E. C. Paget, who officiated as Deputy Commissioner of Police during the absence of Mr. A. B. Barnard on furlough, and of the other officers named in paragraph 38 of the report. To Sir John Lambert himself the thanks of Government are due for his most efficient administration of the Department under his control, and to Mr. Marsden, Mr. Pearson, Nawab Syud Ameer Hossein, C.I.E., and the Hon'ble Maulvi Abdul Jubbar for the good work done by them during the year. The names of the subordinate officers favourably mentioned have been noted

ORDER.—Ordered that copies of the Resolution be forwarded to the Commissioner of Police, Calcutta, for information and communication to the Presidency Magistrates, and to the Commissioner of the Presidency Division, and the Chairman of the Corporation of Calcutta, for information.

Ordered, also, that a copy of this Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant Governor of Bengal,

H. J. S. COTTON,

Chief Secretary to the Govt. of Bengal.

EXPENDITURE ON EDUCATION BY DISTRICT BOARDS.

MUNICIPAL DEPARTMENT—LOCAL SELF-GOVERNMENT.

Darjeeling, the 28th June 1894.

RESOLUTION—No. 306T.M.

READ again—

The Resolutions on the workings of District Boards in Bengal for 1891-92 and 1892-93.

In the Resolutions cited above, the Lieutenant-Governor reviewed, among other things, the expenditure incurred by District Boards in either year upon education generally, and upon that class of education which falls within the category of primary instruction; in the latter of the two he commented at some length upon the comparative expenditure of the various Boards throughout the province, and reiterated in paragraph 36 the principle that until full provision has been made for primary education in a district, no part of a Local Fund should be diverted to the support of education of a higher kind, since this is beyond the needs of the majority of tax-payers, and may well be paid for by those who desire it. Since the issue of that Resolution the Lieutenant-Governor has again had under his consideration the whole question of the educational expenditure of District Boards, and he desires to draw the attention of all concerned to the following observations which are the outcome of his enquiries and reflections.

2. The figures given in paragraph 37 of the Resolution of the 18th December 1893 were taken from those set forth in Form III appended to that Resolution, which shows the expenditure of District Boards in 1892-93, supplemented by statistics drawn from the reports of Divisional Commissioners. But it has been rightly pointed out by the Director of Public Instruction that the sums entered under the head of "Primary Schools" in column 22 of that Form represent much less than the amount actually expended on primary education by the District Boards of Bengal, and that any calculations based upon those figures alone must necessarily be misleading. Sir A. Croft has urged that, besides the sums actually expended upon the direct maintenance and aid of primary schools, considerable expenditure is incurred every year by District Boards under the heads of "Inspection," "Scholarships," "Buildings and furniture," "Charges on account of abolished schools," "Examinations, prizes, and rewards," and "Miscellaneous," and that in some cases all, in others a large proportion, of this expenditure is incurred on account of primary schools.

3. The propriety of this contention the Lieutenant-Governor unhesitatingly admits, and he has accordingly caused to be prepared, in consultation with the Director of Public Instruction, from the figures supplied to the Education Department from each district for the preparation of General Table IV, attached to the Director's Annual Report, a fresh series of statistics, showing what the real expenditure of each District Board was in 1892-93 on primary education and on education generally, and also what ratio these bore to the ordinary income of the Board. Under one of the heads of account mentioned by the Director of Public Instruction, viz. "Scholarships," the expenditure was easily separable, and it has accordingly been separated: in other cases it was only possible to fix a percentage which should represent a fair share of the expenditure, and accordingly His Honour has been pleased to decide that of the actual expenditure of District Boards on education in 1892-93, the following proportions under each head should be debited to primary instruction:—"Inspection," 90 per cent.; "Buildings and furniture," 75 per cent.; "Charges for abolished schools". and "Cost of examinations, prizes and rewards," the whole; and "Miscellaneous," 50 per cent. With these principles for a basis, the figures for 1892-93 have been recalculated as well as those for 1888-89, that being the first year in which the system was in force of allotments to District Boards to produce equilibrium between their receipts and their expenditure upon certain branches of the administration placed under their control: a statement has been prepared, which is appended to this Resolution, comparing the educational expenditure in each of those years, while two

subsidiary statements give the details of the expenditure on primary education shown in the larger statement. The headings of these statements explain themselves, and it is only necessary to say that the difference between the figures in columns 2 and 8 of the general statement is due to the fact that the former exclude and the latter include grants for lower primary scholarships, the control over which, together with allotments to pay for them, was made over to District Boards in the year 1891-92, and also that the "ordinary income" in columns 3 and 9 has been calculated by deducting from the figures in column 73 of Form II of the District Board Resolution the total of columns 63, 68 and 72 of the same form.

4. The first point which cannot fail to suggest itself upon a perusal of these statements is that the expenditure on education, whether general or primary, has not kept pace with the increase of ordinary income, for the difference between the ordinary income of the District Boards in 1888-89 and 1892-93 represents an advance of 15·7 per cent., whereas the general increase in expenditure on education, even although a large annual obligation for lower primary scholarships had been accepted by District Boards in the meantime, is only 2·3 per cent., that on primary education being 3·3 per cent. As the allotment (columns 2 and 8) was larger in 1892-93 than it was in 1888-89 by 2·9 per cent., it is clear that the expenditure on education generally has not advanced at all, and that the measure of the increase of that on primary education is only ·4 per cent. Put in another way, it appears that the addition of the grant for lower primary scholarships has raised the sum directly available to District Boards for expenditure on education by Rs. 29,520, but the aditional sum which they actually spent on education generally in 1892-93 was only Rs. 23,668, out of which the additional expenditure on primary education was represented by Rs. 23,238. Practically it may be said of the province generally that out of the increase in their income of 12·8 per cent. (excluding the 2·9 per cent. represented by the additional lower primary scholarship grant), the District Boards have spent nothing on education.

5. But though this remark is true of the province as a whole, it is not true of all its parts. Taking first the percentages of total expenditure on education (columns, 6 and 12), it will be seen from the figures below that the Presidency and Orissa Divisions have an advance of 3·5 and 3·6 per cent. respectively. These two Divisions also stand very high in respect of the proportion spent on education in 1892-93. The largest falling off is seen in Dacca (8·2 per cent.) followed by Chittagong (4·6 per cent.). Of the thirty-eight districts in which the Local Self-Government Act is in force, there has been an increase in seventeen and a falling off in twenty, the proportion in Mymensingh remaining practically unaltered. In the Presidency Division the increase is universal, as is the decrease in those of Dacca (except Mymensingh) and Chittagong. In the Rajshahi and Bhagalpur Divisions the districts are equally divided, while in the other Divisions the proportions vary, the Patna Division having an increase in two and a decrease in five, and the Orissa Division showing an increase in two out of its three districts.

6. As regards the proportionate expenditure, not on education generally, but on primary instruction, columns 7 and 13 of the general statement supply the figures required for a comparison of this nature between the expenditure of 1888-89 and of 1892-93. The Divisional figures show that, as in the matter of general educational expenditure, so too in expenditure on primary education, there has been a falling off in every Division except those of the Presidency and Orissa; but the differences are not so great, ranging between an increase of 3 per cent. in the Presidency Division and a decrease of 4·9 in Chittagong. The statistics for districts show that in respect of expenditure on primary education the facts are very much what they have been noticed to be for educational expenditure generally, for twenty-one districts display a falling off and seventeen an increase, and with three exceptions the districts in each case are identical. These exceptions are Hooghly, which shows a decrease under primary education, but an increase in its proportionate expenditure on general education, while on the other hand Pabna and Chittagong with a smaller proportionate expenditure under the head of general education, show an advance under that of primary instruction.

7. How the variations in the proportionate expenditure of 1888-89 and 1892-93 have occurred is shown clearly in the following table, where the total difference in the proportionate expenditure in each of the two years is dissected so as to show the variation under "Primary" and under "Other education," and it will be seen that while thirteen districts have reduced their expenditure under both heads, fourteen others have increased it under both heads. Again, six—Murshidabad, Khulna, Pabna, Chittagong, Patna and Darbhanga—have increased their primary expenditure and decreased that under education other than primary; while in opposition to the known policy of Government, in six cases—Hooghly, Rajshahi, Mymensingh, Backergunge, Noakhali, and Purnea—the primary expenditure has been starved for the benefit of secondary or technical instruction or both. Shahabad and Monghyr have reduced their proportionate expenditure on primary instruction, but left untouched that on other education.

DIFFERENCE BETWEEN PERCENTAGES OF EXPENDITURE IN 1888-89 AND 1892-93.

The most remarkable figures in the foregoing statement are those for (*a*) Burdwan with its total decrease of 20·3 per cent., three-fourths of which

have occurred under education other than primary; (*b*) Bankura with a falling off of 26·6 per cent., occurring under both heads; (*c*) Hooghly with a considerable rise under "other" education, provided apparently by a reduction of expenditure on primary education; (*d*) Dacca with a large reduction of 21 per cent. in education other than primary; (*e*) Faridpur with a decrease of nearly 19 per cent., of which two-thirds is under primary education; (*f*) Tippera and (*g*) Chittagong with a large shrinkage of 9·3 and 8·2 per cent. respectively in primary expenditure; and, lastly (*h*) Gaya with a falling off of 5·3 per cent. under the same head.

8. Leaving, however, the question of variations between the expenditure of the two years, and turning to actual expenditure in 1892-93, the percentages of expenditure on primary education in a few districts which have done conspicuously well or ill in that respect are given in the margin; and it may be noted that the provincial average for primary expenditure was 11·9 per cent. of the ordinary income in 1892-93 as against 13·3 per cent. in 1888-89.

9. In the first list the Lieutenant-Governor is glad to observe, as a sign of increasing activity in a province which has long been considered backward, that three out of the first four are Orissa districts. In his Local Self-Government Report for 1892-93, the Commissioner of that Division refers to the matter, but as his figures take no account of all the additional charges which have now been included as expenditure on primary education, he does not appear to have realised how large a proportion the expenditure on primary education really bore to the ordinary income of these districts, which is comparatively small. In the same way very little is said in the Burdwan Commissioner's report about the expenditure in Bankura, but the ordinary income of the Board (Rs. 91,141) is so small that a liberal allotment for education here, as in Orissa bulks very large.

10. As regards the second list, the Lieutenant-Governor desires to draw the particular attention of the District Boards concerned to the excessively small proportion borne by their expenditure on primary education to their ordinary income. The district which spent the smallest proportion of its income on the elementary education of children is Jalpaiguri, and the next five are all in Bihar. The argument of the District Board in each case will doubtless be that the upkeep of their roads and bridges leaves them no margin for educational expenditure, but the District Board should hold the scales evenly between the different objects to which the funds entrusted to them are devoted. The shortcomings of most of the District Boards in this list were unfavourably noticed in paragraph 33 of the Resolution on District Boards for 1891-92, and the Lieutenant-Governor is disappointed to find that they are still open to criticism. His Honour desires that the Board of each district shown in the foregoing list as spending less than 10 per cent. of its ordinary income on primary education will submit, through the Commissioner, any representations which they may think proper in justification of what appears to have been in some measure a failure in their duty to the poor of the district.

11. It has also been urged by the Chairman of one of the District Boards in question that the obligations of the Board are amply fulfilled so long as their expenditure on education does not fall below the figure given in column 8 of the appended statement as the amount of educational expenditure taken in fixing the grant from Government in 1887-88. This is a plea which the Lieutenant-Governor cannot accept. The sum in question was fixed upon a consideration of the actual expenditure on education during the preceding year, and was not intended to represent a permanent standard which District Boards should be satisfied to attain. Were this view to be accepted, it is manifest that in the backward districts, where the sum originally allotted was necessarily small, no advance would ever be made, and those areas where

progress is most desirable would always lag farthest behind. But the Lieutenant-Governor is not blind to the fact that in many of these districts the want of funds seriously hampers the development of primary education, and he is prepared, and is now arranging, upon the recommendation of the Director of Public Instruction, to make grants to such backward districts out of the savings effected year by year in the departmental allotment for primary schools in excluded districts and municipalities.

12. For the future it is hoped that, instead of figures obtained by estimation, it will be possible to show for every district the actual expenditure upon each branch of primary education. The Director of Public Instruction has already by Circular No. 2T. of the 24th June 1894 called for a statement which in future years will be used to amplify Subsidiary Table II (*b*) of his Annual Report; and the Lieutenant-Governor now desires that the Deputy Inspector of Schools in each district may be directed to supply to the Chairman of the District Board a copy of the figures submitted to the head of the Educational Department in accordance with that circular, in order that these may be embodied in a statement in the accompanying form, which will be added as Appendix C to the Annual Report on the working of District Boards for 1893-94, and may, if necessary, be submitted to the Commissioner after the report itself has been forwarded.

13. The Lieutenant-Governor trusts that the attention which the compilation of these statistics will cause to be given to this subject will bear fruit in a careful revision of the expenditure on primary education in each district, so that an adequate provision may everywhere be made for the elementary education of the children of the poor.

By order of the Lieutenant-Governor of Bengal,

J. A. BOURDILLON,

Offg. Secretary to the Govt. of Bengal.

APPENDIX C TO THE REPORT ON THE WORKING OF THE _____ DISTRICT BOARD FOR 1893-94.

Expenditure from the District Fund on Primary Education in the year 1893-94.

DISTRICT.	Direct payments to schools.	Sub-Inspectors.	Subordinate inspecting agency.	Primary scholarships.	Buildings and furniture.	Charges for abolished schools.	Examinations, prizes and rewards.	Miscellaneous.	Total.	REMARKS.
1	2	3	4	5	6	7	8	9	10	11

Column 2.—This should give the sum of payments to (*a*) stipendiary and (*b*) non-stipendiary schools in Subsidiary Table II (*b*)
Column 3.—Eighty per cent. of the salary and travelling allowance of Sub-Inspectors should be entered.
Column 4.—The whole cost of inspecting pundits and chief gurus should be entered.
Columns 5, 7 8, and 9.—Charges incurred in and for primary schools only should be entered.
N. B.—Fractions of a rupee to be neglected; the nearest rupee to be taken.

Statement comparing the Educational expenditure of District Boards in 1888-89 *and* 1892-93.

RESOLUTION ON THE REPORT OF THE SANITARY COMMISSIONER, BENGAL FOR 1893.

MUNICIPAL DEPARTMENT—SANITATION.

Dated Darjeeling, the 28th June 1894.

RESOLUTION No.

READ—

The Report of the Sanitary Commissioner, Bengal, for the year 1893.

Read again—

The Report of the Sanitary Commissioner, Bengal, for the year 1892, with the Resolution of Government recorded thereon.

The registration of vital statistics has been conducted during the year as previously by the agency of the Police, both in urban and rural areas. The incompleteness of this registration in Bengal has for many years been noticed by the Supreme Government and by successive Lieutenant-Governors with dissatisfaction, but Sir Charles Elliott is glad to see that a distinct, if slight, improvement is now visible, and this is the view taken by the Government of India in a Resolution recently recorded on the subject. In the year 1881, the registered birth-rate in Bengal was 25·52 per thousand in certain Municipal towns only, and the death-rate was 20·97: in 1893 the recorded birth-rate for the whole province was 35·66, and for towns alone 26·27, while the general death-rate was returned as 28·21 per thousand without any suspicion existing that the rise is due to any real increase in mortality. These figures will be further discussed in the paragraphs below, but they speak for themselves, and justify the Lieutenant-Governor in congratulating the Sanitary Department on having anticipated the desire of the Government of India that increased attention should be paid to the subject, and a greater accuracy of registration secured.

Improvement in Registration of Vital Statistics.

2. The total number of births registered in the whole province was 2,534,859, giving a birth-rate of 35·66 per thousand, as compared with one of 28·06 in 1892. In last year's Resolution the normal birth-rate for these Provinces was estimated at something between 45 and 47 per thousand, but Dr. Gregg contends that the normal rate is not over 40. In the face of Mr. Baines' calculation (pages 61 and 282 of his Report) that the average annual birth-rate for all India is 48 per mille, and that the Bengal rate approaches 50, this estimate appears more than doubtful; but even if it be accepted, the rate returned, viz., 35·66, is still below the truth, though a large improvement was effected during the year under review as compared with previous years. This is further apparent from the fact that there is now for the first time reported in every Division of Bengal an excess of births over deaths. Compared with the statistics elsewhere, the birth-rate in Bengal was lower than in the North-Western Provinces and Central Provinces, as the following figures for 1893 will show:—

Birth-rate.

North-Western Provinces	40·95	Punjab	34·95
Central Provinces ...	38·23	Assam	30·15
Bengal	35·66	Madras	27·0
Bombay	35·30	Burma	25·68

but whereas in 1892 Bengal stood sixth in the list, it now occupies the third place.

3. The number of towns in which births were registered in 1893 was 147, with a population of 3,453,465, as compared with 145 towns in 1892, having a population of 2,768,381. The number of births recorded was 90,743, giving a ratio of 26·27 per thousand of the population against 70,088 or a ratio of 25·31 per thousand in the previous year. The statistics supplied in the report show on the face of them how unreliable the registration of births in certain urban areas still continues to be. The highest figures were returned by the towns of Mohespur (49·2), Meherpur (47·25), Chanduria (45·5), Lohardaga (43·17), Jamalpur (42·34), Rosera (42·06), Kushtea (41·43), and Jamui (40·02), in all of which the recorded birth-rate exceeded 40 per thousand. In twenty-five other towns it was between 35 and 40; in thirty-one between 30 and 35; and in seventeen it was under

Registration of births. Towns.

20 per thousand. Seventeen town areas show a birth-rate of less than 20 per thousand. It is obvious that in large towns and cantonments the birth-rate is generally smaller than in rural areas with the same population, since the former contain a smaller proportion of women, and it is not surprising therefore to find among the seventeen places at the bottom of the list, Calcutta 19·79), Darjeeling (19·44), Dum-Dum (19·23), and Howrah (19·16); this explanation does not always serve, however, and the Lieutenant-Governor must conclude that such figures as those in the margin can hardly represent the actual facts, but must in most cases denote indifferent registration, to which more attention should be paid in the current year.

Baruipur	14·02
Barasat	14·04
Patuakhali	15·35
Madaripur	17·35
Baranagore	18·02

4. The total number of births recorded in rural areas, of which there are 558 with a population of 67,616,178, was 2,444,116 against 1,911,872 births in a population, of 67,619,702 in the previous year. The birth-rate in rural areas was 36·14 per thousand against 28·27 in 1892. The highest rates for the rural areas in a district are reported from Nadia (50·66), Murshidabad (47·87), Noakhali, (44·58), Dinajpur (43·73), Rajshahi (43·54), Malda (42·65), while five others have a birth-rate of 40 and more. The lowest rates are recorded in Darjeeling (20·25), the Sonthal Parganas (26·84), Manbhum (28·61), and Shahabad (29·66). Before the 1st of January 1892 births were recorded in urban areas only, and the Lieutenant-Governor considers that it is creditable that the registration should have been as high as 28·27 per thousand in the first year of the system with an improvement of 7·8 per mille in the second twelve months.

Registration of births. Rural areas.

5. Taking both town and rural areas together, the male births numbered 1,314,459, and the female births 1,220,400, giving a proportion of 107 male births to every 100 female births. In the Report now under review, Dr. Gregg demurs to the conclusion stated in the Resolution on the Report for 1892, that the registration of female births is still very imperfect, and he urges that more male than female infants are born, citing in support of his contention the fact that a larger number of male deaths is reported among children up to five years of age. But the Lieutenant-Governor cannot accept this reasoning. The statistics furnished in Form I, Appendix I, show that in not a single district was the number of female births reported greater than that of male births, and it seems to His Honour much more reasonable to assume that this disparity is in some measure due to the fact that the birth of a son is more carefully reported than that of a daughter, and that the same feeling—the greater value and importance of male infants—accounts for the greater number of deaths of male infants reported. It was clearly shown at the Census of 1891 that among the infants living under one year of age, the females outnumbered the males: the sentiment already referred to would certainly tend to the more careful preservation of male infants, and it is therefore difficult to avoid the conclusion that the excess in the number of births and deaths of male infants reported is due to a comparative disregard for female infants.

Births according to sex.

6. The total number of deaths registered during the year was 2,005,463 against 2,247,275 in 1892, the death-rate per thousand of population being 28·21 against 31·90 in the previous year. The year 1893 was one of comparative healthiness in Bengal, and it is worthy of notice that this seems to have been the experience of the whole of India, since, with the exception of Burma, every province returned for the year a death-rate lower than that of 1892, as the following figures will show:

Registration of deaths.

	1892.	1893.
Assam	34·21	30·28
Bengal	31·90	28·21
Punjab	49·48	28·13
Central Provinces	34·14	27·70
Bombay	32·50	27·20
North-Western Provinces ...	34·11	24·10
Burma	18·83	21·58
Madras	22·3	19·3

Even after making allowance for this fact, however, there can be little doubt that the actual death-rate in Bengal is much higher than that recorded.

Deaths in towns.

7. In urban areas the reported death-rate decreased from 32·75 in 1892 to 30·03 in the year under review, the figures ranging from 63·02 in Netrakona to 13·84 in Maniktola. Bhadressur and Kotrung in the Hooghly district also return rates of more than 60 per thousand, while in Puri, Malda, and Buxar the death-rate exceeds 50 in the same number; twenty more towns have death-rates of 40 or upwards: the cause of the excessive mortality is said to have been fever aggravated in the worst places by cholera. Forty-four out of one hundred and forty-seven towns returned a death-rate in excess of 34 per thousand, which was calculated by Mr. Bourdillon in his report on the Census of 1881 to be the probable average death-rate in Bengal. Mr. Baines, however, in his report on the Census of 1891 (page 61), reckons the average death-rate for all India to be 41 per mille and it is hardly probable that the mortality in Bengal is so much lower than in the rest of the Empire. It is discreditable to the municipal administration of Maniktola that it should return so obviously untrue a death-rate as 13·84. The next lowest rate is claimed by Darjeeling with 14·20, a figure which (if correct) speaks volumes for the health of the locality. Thirteen other towns, in which the climate has no special reputation for salubrity, return rates of less than 20 per thousand: in all of these the registration of vital statistics demands the attention of the local officials. The death-rate in Calcutta, where deaths are very carefully registered, was 29·51 against a rate of 30·16 in the other towns of Bengal: it is strange that the difference should not be more in favour of Calcutta, the population of which contains an unusually large proportion of persons in the prime of life, and where the sanitary arrangements including a pure water-supply are superior to those of most other towns in the province.

Deaths in rural areas.

8. For rural areas, seven out of forty-six districts return a death-rate in excess of 34 per thousand. These are Rajshahi (43·05), Darjeeling (42·10), Malda (40·23), Jessore (39·04), Murshidabad (38·99), Nadia (37·33), and Backergunge (36·01). Fever was very fatal in Rajshahi, Jessore, Malda, and Murshidabad, while the well known characteristics of the Terai account for the high rate of mortality in the Darjeeling district. Among units smaller than the district the highest figures are reported from the circles in the margin, the reason for the excessive mortality being given in the Report in each case. Further enquiries should now be instituted by the Sanitary Commissioner with the object of ascertaining how far, by the removal of local causes of disease, the recurrence of such visitations may be prevented. In fifty-seven rural areas the rate is returned at less than 20 per thousand, the lowest of all being the rural area of Dumka in the Sonthal Parganas, from which the absurd figure is returned of 9·74. The attention of all District Officers and Civil Surgeons is called to annual Form No. II in Appendix I to the Report, which, under the orders of the Government of India, has been enlarged and improved.

Bogra	...	Khetlal	71·78
Murshidabad		Asanpur	63·29
		Manullabazar	61·73
		Shahanagar	57·53
		Gorabazar	56·83
		Daulatbazar	51·13
Darjeeling	...	Siliguri	55·56
Jessore	...	Bangaon	53·02
Nadia	...	Hanskali	52·21

Deaths according to sex.

9. It is remarked at page 15 of the Report that from the third year of life to the twenty-fifth there is very little difference between the mortality of males and females, but that after the later age females die less rapidly than males, the difference in their favour increasing with age. If this were really so, and the births were divided pretty equally between the sexes, such a preponderance in the male death-rate as is shown in the table would soon produce a great deficiency of males. The more correct solution would seem to be that, as suggested in paragraph 5 above, the deaths of male infants are more carefully reported, the parents feeling a greater loss. The mortuary statistics according to age give a mortality of 187·38 per thousand for infants under one year of age, and of 36·56 for children between the ages of 1 and 5 years.

Infant mortality.

10. Appendix II gives a list of the number of persons convicted of neglect to register births and deaths in each registering circle, the amount of fines inflicted, and the number of persons warned. An analysis of these figures shows that 1,000 persons were convicted of failure to report: the fines inflicted

amounted to Rs. 1,316, and the persons warned numbered 268. It is remarkable that in the districts of Khulna, Rajshahi, Dinajpur, Jalpaiguri, Puri and Hazaribagh, not a single individual was warned or punished for failure to report, while no reason is assigned for the total omission of information under this head from Shahabad, Darbhanga and Purnea.

Death-rate from various causes.

11. The following statement shows separately the death-rate from the principal diseases during the year compared with 1892:—

Causes of death.	In 1888—92.			In 1892.			In 1893.		
	Urban.	Rural.	Combined.	Urban.	Rural.	Combined.	Urban.	Rural.	Combined.
	2	3	4	5	6	7	8	9	10
Cholera	3·84	2·54	2·61	4·64	3·62	3·67	2·18	1·76	1·78
Small-pox ...	·37	·17	·18	·39	·31	·31	·19	·20	·20
Fever	11·88	18·09	17·79	17·09	23·01	22·72	16·18	20·98	20·78
Dysentery and diarrhœa	2·81	·60	·70	2·98	·59	·71	2·98	·45	·57
Injury	·46	·40	·41	·46	·39	·39	·49	·43	·44
Other causes ...	6·99	3·33	3·51	7·17	3·91	4·07	7·28	4·27	4·42
All causes ...	26·38	25·16	25·22	32·75	31·85	31·90	30·03	28·12	28·21

With the exception of fever and small-pox, diseases usually produce a higher death-rate in towns than in rural areas, the reason assigned by Dr. Gregg being the crowding of persons together in towns, and the consequent violation of sanitary conditions.

Cholera.

12. The mortality from cholera during 1893 was less than half that of the previous year; for 126,976 deaths were recorded against 261,417 in 1892, while for the five years 1888—92 the average was 185,651 deaths. The disease visited every district and attacked altogether 22,444 villages. The most remarkable features in the cholera history of the year were the excessive mortality in the Dacca and Chittagong Divisions, which are usually comparatively free from this disease, and the immunity of the districts of the Orissa Division, which have of late years frequently suffered severely. Another interesting circumstance which supports the conclusions stated in paragraph 11 of the Resolution of last year was that, owing to the copious rainfall of the first three months of 1893, and the consequent ample supply of drinking-water, there was little or no cholera in the hot months of the year, while on the other hand the unusual prevalence of the disease during the months of October, November, and December is attributed to the excessive rainfall during the monsoon. The Civil Surgeon of Dacca attributes the great mortality, which is the highest on record for that district, to the cause just mentioned, and the same cause is held accountable for the excessive mortality in Tippera. In Noakhali the salt-water inundation, which accompanied the cyclone of the 22nd October, caused the pollution of the drinking-water by destroying all the animal and vegetable life that it contained: a similar result followed the great storm-wave of 1876. In the Orissa Division the highest mortality occurred in the month of August after the Car festival at Puri, which was attended by 200,000 pilgrims: considering the outbreak at Puri itself and all along the road, and what the Lieutenant-Governor has read and heard of the deaths among the returning pilgrims at Cuttack and along the canal, it is very remarkable that instead of the epidemic spreading through the whole of Orissa, the mortality was only about one-eighth of what it was in 1892. Cholera was conspicuous by its absence from fairs and festivals during the year, partly owing to the general sufficiency of drinking water, and partly, no doubt, to the observation of strict sanitary precautions, which are now almost everywhere enforced, and are accepted with a better grace than before. The quotations made by the Sanitary Commissioner from the reports of the local officers afford further testimony to the important part played by water in the

spread of cholera, and the Lieutenant-Governor trusts that the power of closing a suspected water-supply, which in the Municipal Amendment Bill has been entrusted to Municipal Commissioners, will be freely used as soon as that Act becomes law.

Small-pox.

13. The total number of deaths from small-pox during the year was 14,531 against 22,380 in 1892, representing a ratio of 2 in 10,000 of the population against 3·1. As in the previous year, the disease was most prevalent in Puri and Cuttack. Dr. Gregg's observations in connection with the difficulty experienced in carrying on the work of vaccination in Orissa will be dealt with at the time the Vaccination Report of the Province is considered. The high rates of mortality in the towns of Raghunathpur, Chaibassa, Bhagalpur, Puri, and Bhabhua, where the ratio ranged from 9 to 1·46 per thousand of the population, call for strict attention on the part of the local officers concerned. As the Sanitary Commissioner remarks, the excuse that the high rate of mortality was due to importation cannot be accepted, as vaccination is compulsory in towns, and if these five towns had been thoroughly protected by vaccination, as they might well have been, the importation of small-pox could not have done much mischief. It is hardly too much to say that the local authorities in these towns are directly responsible for the deaths from small-pox which occurred in them.

Fever.

14. The deaths from fever as usual supply a very large proportion of the total mortality of the year, amounting to 73 per cent. of the whole. Although the deaths from this cause were fewer in 1893 than in the previous year, viz., 1,477,288 or 20·78 per thousand, against 1,615,334 or 22·72 per thousand in 1892, they were largely in excess of the average of the last five years, which was 1,264,352 or 17·79 per thousand. This increase Dr. Gregg attributes partly to improved registration and partly to greater saturation of the soil caused by the heavier rains of 1893 falling on a country with defective drainage. As usual the greatest mortality was recorded in the months of October, November and December. The districts in which the mortality was highest are Rajshahi (35·43), Jessore (33·73), Malda (33·28), Murshidabad (30·85), Dinajpur (29·41), Nadia (28·99), and Jalpaiguri (28·11). All these districts, with the exception of Murshidabad, were the most fever-stricken districts in 1892 also. The figures for some of registering circles give evidence of a terrible mortality as the statistics below will show :—

Nadia	...	Hanskhali	...	...	42·82
Murshidabad	...	Gorabazar	...	...	45·51
		Asanpur	...	...	51·44
		Shahanagar	...	...	44·57
		Manullabazar	...	...	53·08
		Diwansarai	...	...	40·13
Jessore	...	Mohesbpur	...	...	42·01
		Bagharpara	...	...	40·40
		Kaliganj	...	...	40·83
		Salkopa	...	...	41·17
		Bangaon	...	...	44·23
		Gaighata	...	...	43·23
		Gaunapota	...	...	47·69
Khulna	...	Chanduria	...	...	44·73
Rajshahi	...	Nator	...	...	41·11
Darjeeling	...	Siliguri	...	...	45·04
Bogra	...	Khetlal	...	...	45·96
Malda	...	Malda	...	...	42·36
		Ratua	...	...	42·70

The mortality was lowest in Puri (7·70), Balasore (11·35), Calcutta (11·87), Lohardaga (12·20), Saran (12·21), Singhbhum (12·35), and Cuttack (12·38). The Sanitary Commissioner has not brought out in the present Report the facts connected with the fever mortality in the Jalpaiguri and Darjeeling Terai, but it is necessary that the subject should be specially noticed in each year's report, and the statistics for 1893 should now be submitted to Government, together with the Civil Surgeon's report on the subject.

15. It was in order to place within reach of the people everywhere the medicine most effectual in affording protection from fever that the Lieutenant-Governor started at the end of the year 1892 the scheme for the more extended supply in Bengal of Government quinine made up into packets containing five-grains each for sale at one pice the packet. As a first step a beginning was made through the agency of the Postal Department, and the first issues were made about the 29th November 1892. By the end of January 1893 all the post offices in the Bengal, Bihar, and Eastern Bengal Circles were supplied with a stock of quinine, and the quantity distributed up to the 31st December 1893 was 1,677¼lbs, the total number of five-grain packets sold in all districts being 1,313,410. Those districts in which fever is usually most prevalent were supplied first, and the Lieutenant-Governor hoped that it would be in them that the fullest advantage would be taken of the scheme: this hope has only been partially realised, for although Jessore and Nadia absorbed large quantities of the drug, the other five districts mentioned in the preceding paragraph took a comparatively small supply. The following figures show the number of quinine packets sold in each of the most feverish districts, and the order in which each district stands in respect both of the prevalence of fever and also of sales of the drug

Sale of quinine in pice packets.

		Packets.	Order of sales.
1.	Rajshahi	13,974	--
2.	Jessore	131,274	1
3.	Malda	11,384	28
4.	Murshidabad	28,010	13
5.	Dinajpur	13,444	26
6.	Nadia	129,672	2
7.	Jalpaiguri	7,814	38
8.	Darjeeling	7,038	39
9.	Shahabad	77,796	4
10.	Rangpur	18,462	18
11.	Purnea	14,994	24
12.	Pabna	23,154	16

16. The reported deaths from dysentery and diarrhœa, injury and the miscellaneous causes grouped under the head of "Other causes" were 41,150, 31,311, and 314,207 respectively. As usual, Darjeeling suffered most from dysentery and diarrhœa, followed by Calcutta, Howrah, Balasore, and Puri. The ratio of reported deaths from these two diseases per thousand of the population was the same for 1892 and 1893, in urban areas, viz. 2·98, and in rural circles it was ·45 in 1893 against ·59 in 1892.

Mortality from "Other causes."

17. The total expenditure incurred by municipalities for sanitary purposes is shown in the following table:—

Expenditure on urban sanitation.

Heads of expenditure.	Total expenditure.		Difference.	
	1892.	1893.	Increase.	Decrease.
1	2	3	4	5
	Rs.	Rs.	Rs.	Rs.
On conservancy, including latrine	3,82,229	3,79,699	.....	2,530
Ditto establishment ...	3,76,588	3,81,946	5,358	.....
„ drainage	98,600	1,83,190	84,590	.....
„ water-supply	1,50,641	2,14,516	63,875	.....
„ disposal of the dead ...	6,774	6,613	.....	161
„ markets and slaughter-houses	16,734	21,818	5,084	.....
„ vaccination	18,200	18,908	708	.....
„ treatment of the sick ...	2,56,752	2,62,426	5,674	.....
Other sanitary works ...	1,72,196	1,44,844	.....	27,352
Total ...	14,78,714	16,13,960	1,35,246	.....
On construction, maintenance, and repairs of roads	5,03,115	5,00,882	.....	2,233
Total, including roads ...	19,81,829	21,14,842	1,33,013	.....

It is satisfactory to note an increase of expenditure under "Drainage" and "Water-supply." The most important schemes in progress during the year were the construction of water-works at Arrah and Maniktala, the improvements in those at Burdwan and the introduction of better drainage in Patna. But a good deal of attention was directed to sanitary improvement in other towns such as Howrah, where it is proposed to reorganise the conservancy establishment, and Puri, where an attempt has been made to cleanse the Swetganga, the filthiest of its tanks, and to introduce better sanitary arrangements in its numerous lodging-houses. Some progress was made also in the scheme for supplying with pure water the municipalities on the left bank of the Hooghly above Calcutta. The town in which the largest proportion of municipal income was devoted to original sanitary works was Maniktala (39·31), while on the other hand in 47 municipalities nothing at all was spent under this head. This year, as in 1892, the town in which the highest proportion of municipal income was devoted to sanitary works of an annually recurring nature was Nasirabad, where an expensive water-works establishment is maintained.

18. Appendix V furnishes a list of the sanitary works executed in towns and rural areas by District Boards and Municipalities and by private individuals. The total cost of the works undertaken and completed by the several local bodies during 1893 is said to have been Rs. 2,17,729, against Rs. 3,34,658 in 1892, while that of those in progress in towns is estimated at Rs. 3,79,196 against Rs. 62,874. The total amount spent by private individuals on sanitary works during the year was Rs. 3,69,889 against Rs. 3,19,469. These works were tanks and wells for the most part, and large sums have been contributed on this account in various districts by the wealthy nobility and gentry of the locality. These donations have in most cases been suitably acknowledged already, but the Lieutenant-Governor again takes the opportunity of thanking the donors and of reminding other wealthy gentlemen of the great benefits which such works confer upon their poorer countrymen. Dr. Gregg reiterates the despondent opinions he has expressed on previous occasions of rural sanitation in Bengal, where the people continue to disregard the most elementary rules of hygiene. It is unfortunately the case that these rules are neither believed nor followed by the mass of the people, but the Lieutenant-Governor is of opinion that, tedious though the process may be, reform must be left to spontaneous development. No widespread revolution of this character can take place with any prospect of stability unless it derives its impulse from the people themselves, or at any rate commands their sympathy. At present they are not prepared for any measure of sanitary compulsion, especially if such a measure would necessitate additional taxation, but a considerable section of the more enlightened members of the native community recognise the merits of well-considered schemes of drainage, and there has been a general awakening to the importance of a pure water-supply: and though the day is doubtless far distant when the sanitation of Bengal shall be placed on a sound footing, Sir Charles Elliott is satisfied that progress has been made, and that the attention which has been drawn to the subject during the year 1893, one outcome of which is the Sanitary Drainage Bill now before the Legislative Council, and another the arrangements made for the analysis of drinking water by an experienced chemist, will certainly not fail to produce useful results.

Rural sanitation.

19. The most important work undertaken by the Sanitary Board was the preparation of the scheme for supplying filtered water to the municipality of Howrah. The scheme as first designed contemplated an intake at Bellore, two miles north of the town, but arrangements have since been made which will enable the water to be taken at a point much higher up the river, where it is less contaminated. A survey for the drainage and possible sewering of the town of Howrah is still in progress. The Engineer to the Board and the Officiating Sanitary Commissioner were occupied on a Committee to enquire into the purity of the Darjeeling water-supply; this matter is still engaging the Board's attention. Besides these projects, the Sanitary Board gave their advice to municipalities on various projects, notably on the sewering and drainage of Dacca, the improvement of the drainage of Jessore, and the condition of the river Bhyrub near

The Sanitary Board.

that place. The Lieutenant-Governor is satisfied that their work for the year has been useful and important.

Inspections.

20. The number of municipalities inspected by the Sanitary Commissioner was 43, against 35 in the previous year, but the period during which he, as well as the Deputy Sanitary Commissioners under him, were on tour has not been stated, although in the Resolution on the Report for 1891 the Lieutenant-Governor directed that this should be mentioned in future reports. The Sanitary Commissioner is now requested to carry out these instructions. The Officiating Sanitary Commissioner, Dr. Dyson, wrote useful inspection reports on five and Dr. Gregg on four of the Municipalities they visited. The work of the Department was much hampered by frequent changes in the posts of Deputy Sanitary Commissioner, but Dr. D. M. Moir, during the five months that he remained in the Department, rendered important services, for which the acknowledgments of the Lieutenant-Governor are due. His Honour is glad to receive once more an assurance of the good work done by Mr. G. C. Stawell, the Engineer to the Sanitary Board, and other officers subordinate to the Sanitary Commissioner. Dr. Gregg himself, whose place was filled to the Lieutenant-Governor's entire satisfaction by Surgeon-Captain Dyson from the Punjab, was on leave for six months during the year, and the Lieutenant-Governor trusts that he has returned to his duties with restored health and increased vigour.

By order of the Lieutenant-Governor of Bengal,

J. A. BOURDILLON,

Offg. Secretary to the Government of Bengal.

RESOLUTION ON THE INLAND EMIGRATION REPORT FOR THE YEAR 1893.

GENERAL DEPARTMENT—EMIGRATION.

Calcutta, the 30th June, 1894.

RESOLUTION—No. 2235.

READ—

The Report of the Superintendent of Emigration, Calcutta, on Inland Emigration for the year 1893.

THE Report on Inland Emigration for the year 1893 is submitted by Dr. R. Macleod, who acted as Superintendent of Emigration throughout the year, with the exception of a short period during which he was absent on leave and Dr. W. Forsyth acted for him. The arrangement of the Report follows the simplified lines laid down by the Lieutenant-Governor in dealing with the Report for the year 1891, and enables the history of the various classes of emigrants to be traced, so far as the circumstances admit, from the recruiting districts in Bengal along the different routes adopted to the conclusion of the river journey in Assam, Cachar or Sylhet.

Legislative changes.

2. During the year the Act, formerly known as the Inland Emigration Act, 1882, was amended by Act VII of 1893, and the title of the consolidated Act was changed to the Assam Labour and Emigration Act, 1882. The principal changes introduced were the revision of the procedure for dealing with unhealthy gardens, the reduction of the maximum period of labour contracts from five years to four years, and the legalization of labour contracts executed at Dhubri. A revised edition of the Rules under the Act, rendered necessary by its amendment, was prepared during the year, and has since been issued.

In September last the Inland Emigrants Health Act I (B.C.) of 1889 was extended to the Sonthal Parganas, where it was not previously in force. The revised rules under this Act, to which reference was made in the Resolution issued last year, still remain under the consideration of the Government of India.

Contractors' emigrants.

3. There were six licensed contractors, two of whom closed their depôts early in the year, leaving four at the close with one sub-contractor. The staff employed consisted of 24 licensed recruiters, who registered 4,484 intending emigrants, of whom 3,634 were labourers and 850 dependants, against 4,712 registered by 31 recruiters in 1892. In that year 365 emigrants were recruited in Madras, whereas in 1893 no recruiting was effected in that province by any licensed contractor. The average number registered by each recruiter was 186 against 152 in the preceding year. This high average, coupled with the fact that of the total number 4,123 were registered in the 24-Parganas, leads to the conclusion that emigrants were largely recruited from the depôts for free emigrants established in Calcutta and its neighbourhood by contractors working outside the provisions of the Assam Labour and Emigration Act. Some of the emigrants were rejected or deserted after registration, the aggregate number accommodated in the Calcutta depôts being 4,646, including 218 left over from the previous year. The Lieutenant-Governor has read with pleasure the satisfactory account which Dr. McConnell, the Medical Inspector of Emigrants, is able to give of the condition of the depôts and the attention paid to sanitation. In the result the year was a remarkably healthy one, the total number of admissions into hospital being 47, or one per cent. of the depôt population, against 2·3 and 2·6 per cent. in the two preceding years. There were three deaths against 27 in 1892, the percentages being 0·06 and 0·53 respectively. Though not so marked, an improvement is also noticeable in the number of emigrants rejected on medical grounds or discharged, which was 306 against 410 in the preceding year, and also in the number of deserters, 151 against 201. Four thousand and ninety-four emigrants were despatched to Goalundo, the port invariably chosen for contractors' emigrants, leaving a balance of 92 in the depôts at the close of the year. Two emigrants deserted on the way to Goalundo, and eleven were released after arrival. The remainder, numbering 4,081, were embarked in river steamers—

2,921 proceeding to Assam and 1,160 to Cachar and Sylhet. No casualties of any kind occurred on the journey to Assam, and one child was born; so that 2,922 emigrants disembarked at the final landing stations. Of the emigrants whose destination was Cachar and Sylhet, 3 died on the way, and 1,157 were finally landed. No deaths from cholera occurred among emigrants of this class at any stage of the journey.

Sardari emigrants.

4. The sardari emigrants are recruited by certificated garden sardars and sardarnis, generally under the supervision of local agents, and by special local agents. Of the latter, there were five during the year who registered 3,500 emigrants, chiefly obtained, it is supposed, with the help of the free emigration system of collecting labour. In the preceding year 7 special local agents registered 3,217 emigrants. The number of garden sardars employed was 4,762, which is largely in excess of the number in preceding years; the emigrants registered by them numbered 10,657, being an average of a little over two emigrants to each sardar. Adding 109 emigrants registered by 104 sardarnis, the total amounts to 10,766 against 10,191 registered by this agency in 1892. Inclusive of those registered by "special local agents" without the intervention of garden sardars, who should be shown separately in future, the total number of so-called sardari emigrants registered was 14,266 against 13,408. It is worthy of note that more than the entire increase was drawn from the recruiting districts* of Bengal, which supplied 12,887 emigrants, against 11,238 in the previous year, while the number recruited in Bihar fell from 2,170 in 1892 to 1,379 in 1893. Including emigrants registered but not despatched in the previous year, 13,682 left the recruiting districts for Goalundo and 1,576 for Dhubri.

* These are, in order of importance, Manbhum, Lohardaga, Hazaribagh, Midnapore, Bankura, Sonthal Parganas, Burdwan.

Sardari emigrants travelling to Assam, Cachar, and Sylhet.

5. During the journey to, and the stay at, Goalundo, 44 emigrants were left behind or were released or deserted, against 126 in the previous year, and five emigrants died, three from cholera, against 17 deaths in the previous year, of which 16 were from cholera. Of the remainder, 8,905 embarked for Assam, 3,092 for Cachar, and 1,635 for Sylhet, one emigrant remaining at Goalundo at the close of the year. Similarly, in regard to the Dhubri emigrants, two deaths from cholera occurred prior to embarkation, against 12 deaths (11 from cholera) in the previous year. The number finally embarked was 1,563, the balance being variously accounted for. The total number of sardari emigrants embarked at Goalundo and Dhubri for Assam was therefore 10,465. During the river journey there were three desertions and one death, due to cholera, against 58 deaths, of which 50 were due to cholera, and 7 left behind in the year before, so that, inclusive of one child born on the way, 10,465 emigrants were disembarked at the final landing stations. The emigrants bound to Cachar lost four of their number by desertion and one death occurred from cholera, while two children were born. There were no casualties among those whose destination was Sylhet. The number finally landed was 3,089 in Cachar and 1,635 in Sylhet, making a total of 4,724.

Free emigrants.

6. No record is kept in the recruiting districts of the number of free emigrants actually despatched to Goalundo or Dhubri, but the Emigration Agents stationed at these places have this year been able to furnish statistics which may be accepted as approximating to the truth. 23,654 emigrants are said to have left the recruiting districts for Goalundo and 8,061 for Dhubri, making a total of 31,715. This does not, however, include those who may have been transported from up-country by boat to Sylhet or Cachar, regarding whom the Superintendent of Emigration received no information. One death occurred at Goalundo from cholera; and prior to arrival at Dhubri three deaths occurred. Further deductions have to be made on account of emigrants who deserted, or were released, or left behind; and while only 11 emigrants were left behind during the journey to Goalundo, 270 emigrants, or 3·34 per cent. of those who travelled by this route, were left behind before arrival at Dhubri. The corresponding figures in the case of sardari emigrants are 12 and 3 respectively. The Lieutenant-Governor desires that in future reports some indication may be given as to what becomes of the emigrants left behind in the course of the railway journey to Goalundo and

Dhubri, to whatever class they may belong. The number of free emigrants finally embarked at Goalundo amounted to 23,597, of whom 13,008 were destined for Assam, 4,116 for Cachar, and 6,473 for Sylhet. Of the emigrants bound for Cachar and Sylhet, 662 were embarked on country boats and the remainder on steamers. So far as could be ascertained, no casualties occurred among the former. Among the latter only two deaths occurred—both due to cholera. The number of emigrants disembarked was therefore 10,587 against 10,080 in the preceding year. Of the Assam emigrants (all of whom travelled by steamer), four died of cholera before reaching Dhubri, against 17 (15 from cholera) in 1892, while 12,773 were landed at Dhubri to execute labour contracts, thus augmenting the number of free emigrants accommodated during the year at Dhubri to 20,574.

Offences connected with emigration.

7. As quarterly statistics are now received from the recruiting districts, and a quarterly Resolution is issued by this Government regarding all complaints made to the Police or Magistrates, and all cases judicially tried by the latter, the subject-matter of which is kidnapping or illegal restraint or confinement by recruiters or other offence connected with emigration, it is unnecessary to mention the subject in the Annual Report on Inland Emigration or in the Government Resolution thereon.

General.

8. The results of the year's operations are comprehensively shown in the following two tables:—

(1) Showing emigrants recruited, embarked and disembarked, and casualties occurring after despatch from the recruiting districts:—

Class.	Registered.		Despatched from recruiting districts, including emigrants remaining at Calcutta, Goalundo, and Dhubri from previous years.		Embarked at Goalundo and Dhubri.		Disembarked at final landing stations, including births on the way.		Mortality. From cholera.		Mortality. Other causes.		Medically rejected.		Discharged or released.		Left behind.		Deserted.		Total of columns 10 to 21.		Percentage of columns 22 and 23, on columns 4 and 5.		Remaining at Calcutta, Goalundo and Dhubri.		Total of columns 22 and 23, and columns 26 and 27.	
	1892.	1893.	1892.	1893.	1892.	1893.	1892.	1893.	1892.	1893.	1892.	1893.	1892.	1893.	1892.	1893.	1892.	1893.	1892.	1893.	1892.	1893.	1892.	1893.	1892.	1893.	1892.	1893.
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29

Total ...	18,120	18,750	54,422	51,711	52,685	50,406	52,224	49,801	260	17	70	25	5	6	424	1,105	322	297	354	314	1,435	1,764	2·6	3·4	47	151	1,994	1,4

(2) Showing emigrants according to destination:—

Class.	Disembarked at final landing stations in— Assam.		Sylhet.		Cachar.		Total.	
	1892.	1893.	1892.	1893.	1892.	1893.	1892.	1893.
1	2	3	4	5	6	7	8	9
Contractor ...	3,324	2,922	170	678	656	479	4,150	4,079
Sardari	9,460	10,465	1,255	1,635	3,316	3,089	14,031	15,189
Free	23,963	19,946	7,377	6,471	2,703	4,116	34,043	30,533
Total ...	36,747	33,333	8,802	8,784	6,675	7,684	52,224	49,801

These figures show that, while there has been a slight decrease in the number of contractors' emigrants, and a considerable decrease in that of free emigrants, the number of emigrants recruited under the sardari system has increased. The total number of emigrants registered under the Act increased from 18,120 in 1892 to 18,750, the number embarked from 18,285 to 19,276, and the number disembarked from 18,181 to 19,268. Taking all classes, however, the year shows a diminution in the volume of emigration, the total number of emigrants landed in the labour districts being 52,224 in 1892 and 49,801 in

1893. The increase in the number of garden sardars employed, and the small number of emigrants recruited by each sardar, have been noticed above, and it is probable that emigrants recruited personally by trustworthy sardars deputed from the tea gardens for this purpose are found to be more satisfactory, and perhaps in the long run cheaper than the emigrants supplied by contractors, whether licensed under the Act or not.

Casualties.

9. The differences between the numbers despatched from the recruiting districts and the numbers embarked and disembarked have been explained in some detail in the preceding paragraphs, and columns 10 to 21 of table (1) above give the total number of casualties under each head, subsequent to the emigrants leaving the recruiting districts. It is of course desirable that intending emigrants should be allowed every opportunity of reconsidering their position on their way to the labour districts, and that, if unfit or unwilling to proceed, they should be sent back or permitted to return to their homes in accordance with the rules in force or the conditions under which they agreed to emigrate. Nevertheless it is clearly beneficial both to the emigrants concerned, and to those who are engaged in the supply of labour, that the proportion of those who desert or whom it is found necessary to release or discharge after the journey has begun should be reduced so far as possible, and the Lieutenant-Governor will be glad if, with the co-operation of contractors and others, some attempt be made to effect an improvement in this respect. The proportion is considerably the largest in the case of contractors' emigrants, but it is also appreciable in the case of free emigrants. In both cases much might be done by insisting on more careful recruiting in the first instance, thereby saving many labourers from much unnecessary harassment, and obviating the necessity for spending large sums in returning them to their homes. With these remarks, however, His Honour must express himself well satisfied with the results of the year, and especially with the remarkable immunity from cholera enjoyed by emigrants of all classes. The total mortality caused by this disease in the course of the journey to the labour districts fell from 260 in 1892 to 17 in 1893, and the mortality from other causes was also much diminished.

10. The Lieutenant-Governor desires to acknowledge the efficient manner in which Dr. R. Macleod, Superintendent of Emigration, and Surgeon-Lieutenant-Colonel J. F. P. McConnell, Medical Inspector of Emigrants, performed their duties.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Secretary to the Government of Bengal.

ANNUAL REPORT FOR 1893-94, UNDER THE LICENSED WAREHOUSE AND FIRE-BRIGADE ACTS IV AND I RESPECTIVELY OF 1883 AND 1893.

THE following report is published for general information.

J. A. BOURDILLON,
Offg. Secretary to the Govt. of Bengal.

Dated Calcutta, the 23rd May 1894.

From—E. W. COLLIN, Esq., Chairman, Howrah Municipality,
To—The Secretary to the Government of Bengal, Municipal Department.

I HAVE the honour to report on the working of the licensed warehouses in this Municipality for the year 1893-94. There were in all 271 warehouses comprised of the following :—

For storage of	Jute	...	19
Ditto	Cotton	...	36
Ditto	Straw	...	63
Ditto	Wood	...	151
Ditto	Rags	...	1
Ditto	Hay	...	1

2. The income from license fees on these warehouses amounted to Rs. 5,592. In accordance with Municipal Department, Municipal No. 29T.M., dated the 30th of August 1893, the fees for the first quarter of the year were levied under the old Act IV (B.C.) of 1883, and for the remaining three quarters under the new Act I (B.C.) of 1893. A classified list of the licensed cotton and jute warehouses is given in Appendix A, these being the most important, while for the other numerous warehouses no list is given. One new jute warehouse was added to the old list, together with ten new cotton warehouses, making a total of eleven additional jute and cotton warehouses established during the year.

3. In addition to the jute and cotton warehouses licensed during the year under the old and the new Acts, there were 216 warehouses other than jute and cotton, such as those for the storage of wood, straw, hay and rags. These warehouses, previous to the year 1893-94, were licensed under section 261 of Act III (B.C.) of 1884, but in July 1893 were brought under the provisions of Act I of 1893.

4. The amount of fines from prosecutions instituted under section 14 of the new Act was Rs. 68.

5. The expenditure incurred in assessing and collecting the license fees, in supervising the Department in which this work was done, and for contingencies and repairs to a Municipal Fire-engine, amounted to Rs. 1,389, particulars in detail being given below :—

		Rs.	A.	P.
1.	Salary of General Supervisor and Assessor ...	750	0	0
2.	Ditto Clerks	205	5	3
3.	Ditto Peon	32	7	0
4.	Contingencies	16	11	0
5.	Repairs to Municipal Fire-engine	385	0	0
	Total ...	1,389	7	3

6. A further sum of Rs. 110 was paid to the Port Commissioners as rent of a tiled hut for sheltering a hand-pump belonging to the Howrah Branch of the Calcutta Fire-brigade.

7. Payments on account of refund of excess collections made during the early part of the year amounted to Rs. 467.

8. The total expenditure therefore amounted to Rs. 5,634.

9. The Fire-brigade establishment has hitherto remained under the control of the Commissioner of Police, Calcutta. The Fire-brigade Station in Howrah is most centrally situated, standing next to the Municipal Market, and so located as to admit of the watch overlooking the whole town and detecting all fires occurring. There were ten fires during the year. A statement in Appendix B shows the particulars of each fire with the destruction of property in each individual instance.

10. The total amount remitted to the Commissioner of Police during the year was Rs. 3,668 as required by Municipal Department, Municipal No. 29T.M., dated the 20th August 1893.

APPENDIX A.

List of Jute and Cotton Warehouses licensed or exempted during the year 1893-94.

CALCUTTA,
The 15th May 1894.

A. B. BARNARD,
Deputy Commissioner of Police.

FORECAST OF JUTE CROP IN BENGAL, 1894.

The following is published for general information.

C. E. BUCKLAND,
Secretary to the Govt. of Bengal.

REVENUE DEPT.,
The 2nd July, 1894.

DEPARTMENT OF LAND RECORDS AND AGRICULTURE, BENGAL.

First forecast of the jute crop in Bengal for season 1894 (*to the middle of June*).

1. *Explanatory.*—The number of jute-growing districts from which forecasts have been received this year is 26, and includes for the first time the districts of Burdwan, Murshidabad, Backergunge, Noakhali, and Bhagalpur.

2. *Season.*—A moderate amount of rain fell in April throughout the entire jute-growing area, and is believed to have proved favourable to the preliminary operations of cultivation. The rainfall during May was abundant and well distributed in East and North Bengal, which comprise the most important jute-growing districts in Bengal; but in the districts of South-West Bengal, East Bihar and Orissa was generally short of the normal, and the want of rain was seriously felt in those districts during the latter part of the month. In the first half of June, copious showers have fallen everywhere with the general advance of the monsoon current. The season has so far proved favourable to the jute crop, except in the Central and Western districts, viz., Burdwan, Hooghly, Midnapore, Murshidabad, 24-Parganas, Khulna, Malda, Bhagalpur, Cuttack, and Balasore, where the prospects of the crop were injured by deficiency of rainfall during May; those districts are, however, comparatively unimportant as jute-producing districts.

3. *Area cultivated.*—The total area sown in jute during the current year appears from the district returns to be 2,228,500 acres, against 2,220,700 acres in the preceding season. The increase in area is inappreciable. The high prices of jute that have prevailed since 1891-92 have again led to an expansion of the area cultivated with jute in East and North Bengal. On the other hand, the scarcity of rain in May has led to a contraction of jute cultivation in the districts of the Burdwan, Presidency, and Orissa Divisions. In fact, owing to the lateness of the season, the entire area reserved for jute in Midnapore, Cuttack, and Bhagalpur had not been sown by the middle of June, when the district returns were prepared. In the Brahmanbaria and Sadar subdivisions of Tippera and in parts of the Sirajganj subdivision of Pabna, the high price of rice is reported to have led to a diminution of the area sown with jute, and in the Narail subdivision of Jessore, a larger area than usual having been sown with *til*, the area thrown under jute has fallen below the normal.

4. *Character of the crop.*—The prospects of the crop, as reported up to the middle of June, are favourable. In North and East Bengal, which are the chief seats of jute cultivation, the present condition of the crop gives promise of

an average outturn. In eight districts only,* all of which are comparatively unimportant in point of jute cultivation, the crop is expected to be below 12 annas, or three-fourths of the average, in consequence of the injury caused by scanty rainfall during May.

* Burdwan, Hooghly, Midnapore, Khulna, Murshidabad, Bhagalpur, Cuttack, Balasore.

Taking all the jute-growing districts together, and bearing in mind the tendency on the part of local reporting officers to under-estimate the outturns of crops, it is believed that the jute crop of this year will be at least an average or 16-anna crop, provided that the season continues to be favourable during the next two months, and that the crop be not injured by early floods. Up to the middle of June the local reports indicate on the whole a slightly better crop than that of 1892.

5. *Estimated exports.*—As remarked above, the standing crop appears to promise a slightly better outturn than the crop of 1892. If the crop fulfils its present promise, the exports of jute, including cuttings and rejections during the jute season of 1894-95 may amount to 31 lakhs of bales, which was the quantity exported in the year 1892-93.

6. The second note on the jute crop will be published by this Department about the 1st September.

B. C. BASU,

Assistant to Director of the Dept. of Land Records and Agriculture, Bengal.

Countersigned.

W. C. MACPHERSON,

Director of the Dept. of Land Records and Agriculture, Bengal.

CALCUTTA,
The 29th June 1894.

First Forecast of the Jute crop in Bengal for 1894 (*to the* 15*th of June*, 1894.)

Division.	District.	Approximate normal area under jute.	Approximate area sown last year (1893).	Estimated area sown this year (1894).	Taking 16 annas to represent the average outturn per acre, how many annas represented outturn last year (1893) ?	Taking 16 annas to represent the average outturn per acre, how many annas will represent this year's outturn (1894) ?	Remarks by the District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
1	2	3	4	5	6	7	8	9
		Acres.	Acres.	Acres.	Annas	Annas.		
Burdwan ...	Burdwan ...	11,100	10,800	10,900	10½	8½	In the Sadar sub-division, owing to deficient rainfall, the whole area under jute could not be sown. For the same reason the outturn will be very poor. In the Kalna sub-division the outturn will be about 8 annas for want of timely rain. In the Katwa sub-division, owing to scanty rainfall, the sowing has been late, and it is too early to make an accurate estimate of the outturn. For the want of rain the cultivation has been delayed in the Raniganj sub-division.	This district has been included for the first time in the jute forecast. Out of 11,000 acres under jute in this district, 10,000 acres are said to be in the Kalna sub-division alone.
	Midnapore ..	18,800	9,200	4,100	8	8	The figures in column 5 represent what has been sown this year up to date. Want of rain at the sowing time has led to the large decrease in the area sown this year. From the Sadar sub-division it is reported that nearly 4,000 acres are likely to be sown after there has been some rain. It is therefore premature to form a correct estimate of the area likely to be sown.	
	Hooghly ...	14,300	14,300	12,500	12	10	The area under jute crop has decreased this year owing to want of rain at sowing time. A good deal of the young plant also withered owing to continued hot and rainless weather. There has been a great deal of resowing which is still going on; but owing to the extreme lateness of the season, the crop is hardly far enough advanced for a satisfactory estimate to be formed. However, as it is so late, it is not likely to be a very good crop.	
Presidency ...	24-Parganas ...	48,600	41,200	35,400	8	13	The decrease in area is due to the want of rain at the sowing time. The outturn is expected to be an average one, if not disturbed by any unforeseen causes.	Then it should have been returned as 16-annas.
	Khulna ...	22,500	21,500	17,800	11	11	Owing to want of timely rain, there has been decrease in area sown at Satkhira. The outturn of the district per acre is expected to be the same as in the last year, but the area under jute is less than last year.	

Division.	District.	Approximate normal area under jute.	Approximate area sown last year (1893).	Estimated area sown this year (1894).	Taking 16 annas to represent the average outturn per acre, how many annas represented outturn last year (1893)?	Taking 16 annas to represent the average outturn per acre, how many annas will represent this year's outturn (1894)?	Remarks by the District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
1	2	3	4	5	6	7	8	9
		Acres.	Acres.	Acres.	Annas.	Annas.		
Presidency—*concld.*	Nadia ...	47,000	46,700	47,000	9	14	The recent rainfall has improved the prospects of the jute crop, which is expected to yield an average outturn of 14 annas this year, provided there be normal rainfall during the current and the next month, and the rivers do not rise too rapidly.	
	Jessore ...	41,500	29,500	33,600	7	14	The area has fallen below normal in consequence of more lands being brought under the cultivation of *til* in the Narail sub-division. The increase in the area over last year's is due partly to the fact that in the previous year, owing to heavy rainfall, many low lands could not be sown, while the rainfall of the current year was seasonable for sowing, and partly to increase in the price. The estimated outturn of the current year is put down as 14 annas or a little below normal. With seasonable rain the yield may be an average one.	
	Murshidabad	30,000	20,900	21,700	13	9	The decrease in area sown this year in comparison with the normal and last year's area is due to want of timely rain, and the outturn will be poorer in consequence,	This district appears in the jute forecast for the first time.
	Dinajpur ...	99,500	106,500	107,500	16	16	High prices have led to an increase in the area sown in jute	
	Rajshahi ...	104,500	100,100	105,200	12½	16	The high price of jute that obtained in the past year, and the high price of jute at present prevailing, induced the cultivators to extend the cultivation, and hence the increase in area. The timely rainfall at intervals at the sowing and weeding seasons stimulated the growth of the crop, and a 16-anna outturn is expected.	
	Rangpur ...	278,500	283,100	286,200	13⅓	16	The increase in area sown this year over normal is due to the rise of price and seasonable rainfall, which was very favourable to the cultivation of jute. The cultivation has increased specially in the two sub-divisions—Gaibandha and Nilphamari.	

Rajshahi ...	Bogra	76,000	75,000	75,000	12	12	The outturn is expected to be much better than this (12 annas), if the plants do not suffer from want of rain during July and August.	The Collector probably therefore need not have been so cautious in his estimate.
	Pabna ...	180,900	197,200	174,500	12	16	In the Siraiganj sub-division the area sown this year is supposed to be on an average the same as that sown last year. The reason assigned is this. The high price of jute has increased the area sown in parts, while the high price of paddy has decreased it in other parts. The result was that the area under jute cultivation remained the same as in the last year. But as for the Sadar sub-division, it is supposed that the small outturn of jute last year, caused by the excessive rainfall, is the reason why the area under jute crop this year is only three-fourths of that of the last year. Timely rainfall afforded the cultivators facilities for sowing. The weather up to date has been favourable for a large outturn this year.	
	Darjeeling (plains).	13,800	13,800	13,800	16	16	.....	
	Jalpaiguri ...	64,000	61,400	64,200	16	13½	The increase in area sown this year, as compared with the normal area, is due to the high price of jute.	It is not explained why the outturn of the crop should be below the average in Jalpaiguri. The two adjoining districts of Rangpur and Dinajpur have both reported a 16-anna crop. Other information states that the crop in the Duars will be 16-annas.
Dacca ...	Dacca	219,300	208,700	211,200	9½	12½	The increase in area sown this year, as compared with that sown last year, is due to the high price of jute during the past year. The outturn is expected to be better than last year owing to timely rainfall.	The rainfall in Dacca appears to have been very nearly normal and well distributed in April and May. It is not understood why the prospects of the crop should be so far below the average, nor why this year's area should fall short of the normal or ordinary area cultivated with jute.
	Faridpur ...	85,000	70,000	85,000	8	16	The increase in the area sown this year as compared with the previous year is due to timely rainfall at the sowing time. Slight damage was done by floods and scanty rainfall at the latter end of April and beginning of May, but still a full 16-anna crop is expected, as the rain of this week has done much good.	
	Backergunge	6,400	6,400	6,400	8	12	Moderate rain fell during the sowing time, and it may be hoped that the crop will be better than the estimate.	This district is included for the first time in the jute forecast.
	Mymensingh	570,800	513,400	550,100	12½	14½	The increase in the area sown this year is attributable to the high prices of jute ruling in the last year. Owing to beneficial distribution of rain, a better outturn is expected this year.	It is not understood why this year's area should fall below the normal.
Chittagong ...	Tippera ...	225,000	230,800	212,000	10½	18	The decrease in area sown this year has taken place in the Sadar and Brahmanbaria sub divisions, and it is due to the fact that many jute lands have been cultivated with paddy on account of high price of rice and failure of paddy crops last year owing to high floods. Timely rainfall at the time of sowing and afterwards has done much good to the crops.	
	Noakhali ...	9,500	9,500	9,500	8	13	Owing to timely rainfall, the outturn is estimated to be 5 annas more than last year.	This district is included in the jute forecast for the first time.

Division.	District.	Approximate normal area under jute.	Approximate area sown last year (1893).	Estimated area sown this year (1894).	Taking 16 annas to represent the average outturn per acre, how many annas represented outturn last year (1893)?	Taking 16 annas to represent the average outturn per acre, how many annas will represent this year's outturn (1894)?	Remarks by the District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
1	2	3	4	5	6	7	8	9
		Acres.	Acres.	Acres.	Annas.	Annas.		
Bhagalpur ...	Bhagalpur ...	19,600	19,600	13,650	16	8½	There has been delay in sowing owing to want of rain, and no correct forecast can be made at present. In Banka the estimate seems to be made on the land that will probably be sown if there is rain.	This district appears in the jute forecast for the first time.
	Purnea ...	62,200	69,000	75,000	15	16	This year a larger area has been sown at Kishanganj with jute than last year, owing to the high price at which jute was sold last year. There has been also a timely rainfall this year, and a good outturn is expected.	
	Malda ...	45,000	31,500	35,500	12	12	The price of jute having considerably increased in the last year, it has been cultivated this year over a larger area. The expected outturn, however, is as bad as that of the previous year owing to scanty rainfall.	
Orissa ...	Cuttack ...	5,500	5,000	3,500	11	11	Owing to prolonged drought a considerable part of the area has not been sown. In fact sowing has not been completed even now. The figures given in columns 5 and 7 are but rough estimates. It is too early to estimate the outturn of the crop, the seedlings not having yet appeared.	
	Balasore ...	3,600	2,600	2,300	13	10	The decrease in area and outturn is due to want of sufficient rainfall at the time of sowing and just when the seeds germinated.	
	Total ...	2,30[illegible],500	2,220,700	2,228,500	13½	(*a*)10½		(*a*) Estimated by this Department.

N.B.—Twenty annas represent a bumper crop, 16 annas an average crop, and 12 annas three-fourths of an average crop, and so on.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 30th June, 1894.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
	BENGAL.		
	BURDWAN DIVN.		
1	Burdwan June 30, '94	3·05	Weather—seasonable. Cultivation of *aman* continues, and in parts transplantation has begun. More rain wanted. Fodder sufficient. Prices of common rice:—
	Kalna ...	2·51

The total fall from 1st January to 30th June 1894		18·51
The average fall of the corresponding period for 24 years, Surveyor-General's Office		21·47

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, ıd from observations made at 6h., 10h., 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the ıermometers are verified and the readings have been corrected to a standard constructed and verified at the ew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet ove the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, rmerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in e Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers; t, thunder; =, fog.

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns wanting the correspondina spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at l 0·10 inch of rain has fallen.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 30TH OF JUNE 1894.

TOWARDS the end of the previous week a barometric depression had formed in the north of the Bay, which had advanced in a west-north-westerly direction, and had crossed the coast on the night of the 21st, the centre passing not very far from Balasore, and on the 23rd or the last day of that week it was to the west of Chota Nagpur. The small storm continued its north-westerly advance till its centre was not far from Allahabad, where it remained stationary for several days, certainly up to the 27th, and afterwards again moved away in a westerly direction. As usual in such cases there was a strong inrush of monsoon winds towards the depression, which flowed steadily over Bengal up till the 27th. Hence for the whole of this period weather in Bengal was of ordinary monsoon character with heavily clouded skies and with frequent and rather heavy rain. On the 28th of June, however, a slight change took place in the conditions. Pressure distribution became rather abnormal, very considerable defects being registered over the Bay and the south-eastern districts of Bengal, while excess pressure was recorded in Bihar and parts of West Bengal. Winds also fell off rapidly in force at the head of the Bay, and became irregular in direction at the southern stations of Bengal, pointing to a partial cessation or diminution in force of the monsoon current. On the 29th of June a very feeble barometric depression had formed in the north-west angle of the Bay, and winds showed a very distinct tendency to circulate cyclonically round it, though the circulation did not extend over a very large area. The rainfall bearing current by the indraught towards this feeble depression was partially prevented from reaching Bengal, and on the 29th a good many stations reported no rain. It also appeared that the feeble depression was moving in a west-north-westerly direction, and on the morning of the 30th its centre was close to Balasore, and a little to the east of it. The depression had not, however, intensified to any extent, and it was a very feeble disturbance, though it was accompanied with a very distinct cyclonic circulation of winds, but at the land stations winds were decidedly feeble in force. The rainfall reported on the morning of the 30th was again rather local in Bihar and North Bengal, but with the advance of the depression towards and partially over the land, conditions on the 30th had again become favourable for general and rather heavy rain in Bengal. Practically, therefore, for almost the whole of the week, the monsoon conditions in Bengal have been strongly developed, and hence general and decidedly heavy rainfall has been received for the greater part of the period and also in all districts.

Pressure.—The variations of pressure from day to day have been small and do not call for any comment. The mean pressure for the week has been below the normal at the majority of stations by about 0·02″ to 0·04″, and the defects have been generally largest at the southern and south-eastern stations.

Temperature.—Owing to the heavy rainfall during the week the mean average temperature has been below the normal, the defect for the whole of Bengal equalling about 0·8°, while in Assam the defect has been 0·5°. The largest defects in Bengal have been equal to about two degrees in Bihar and Chota Nagpur.

Rainfall has been in considerable excess in South-West, North and East Bengal and in Bihar, and about normal in amount in Orissa and Chota Nagpur. The average falls have equalled nearly seven inches in North Bengal, between four and five inches in East Bengal and Bihar, about three and a half inches in Orissa, and between two and three inches in South-West Bengal and Chota Nagpur. Expressed as percentages of the normal rainfall the actual falls during the week have equalled the following amounts:—South-West Bengal 121 per cent., North Bengal 165 per cent., East Bengal 131 per cent., Bihar 196 per cent., Orissa 106 per cent., and Chota Nagpur 102 per cent. Considering each division to have an equal value in the calculation, the rainfall of Bengal for the week has equalled 137 per cent.

In Assam, Dhubri has received 8·41 inches of rain during the week, Silchar 8·08 inches, and Sibsagar 2·79 inches.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 30th of June 1894:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average regain of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1894.

Statement of principal commodities carried on the Eastern Bengal State Railway during the month of April 1894.

Increases.

	Tons.		Tons.
Cole and coke	5,088	Stone and lime	2,398
The increase was chiefly in despatches to Shamnagar and Kankinara mill to Barrackpur for brick burning.		Large despatches of road metal to Barasat and Budge-Budge.	
Salt	1,826		
Ordinary fluctuation.			

Decreases.

	Tons.		Tons.
Gunnybags and cloth	1,082	Oilseeds	5,185
Serajganj, Kankinara, Raiganj, Domar and Belakoba show decrease under this head. There were no despatches during this month from Sirajganj.		Almost all the stations on the Bihar Section and most of the stations on the Eastern Section as also Serajganj show decrease under this head due to short crop.	

F. C. W. Dover,
for Examiner of Accounts.

Calcutta, *the 28th June* 1894.

Statement of principal commodities carried on the Bengal Central Railway during the month of April 1894.

Increases.

	Tons.		Tons.
Coal and coke	533	Stone and lime	1,235
Large despatches to Jhikargacha, Baraset and Dum-Dum Cantonment.		Road metal from the E. I. R. to Baraset, Habra and Duttapuker.	

Decreases.

	Tons.		Tons.
Betelnuts	726	Sugar	1,032
The decrease is chiefly in despatches from Flotilla stations *via* Khulna, the crop being defective owing to damage done by storms.		Due to short outturn of the Tarfur sugar works.

Weekly Return of Traffic Receipts on Indian Railways	1229

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled for the purpose of making Laws and Regulations under the provisions of the Indian Councils Acts, 1861 *and* 1892.

THE Council met at the Council Chamber on Saturday, the 7th July, 1894.

Present:

The HON'BLE SIR CHARLES ALFRED ELLIOTT, K.C.S.I., Lieutenant-Governor of Bengal, *presiding.*

The HON'BLE SIR CHARLES PAUL, K.C.I.E., *Advocate-General.*

The HON'BLE H. J. S. COTTON, C.S.I.

The HON'BLE SIR JOHN LAMBERT, K.C.I.E.

The HON'BLE J. A. BOURDILLON.

The HON'BLE MAULVI ABDUL JUBBAR KHAN BAHADUR.

The HON'BLE F. R. S. COLLIER.

The HON'BLE C. E. BUCKLAND.

The HON'BLE C. A. WILKINS.

The HON'BLE MAULVI SYED FAZL IMAM KHAN BAHADUR.

The HON'BLE MAHARAJA RAVANESHWAR PROSAD SINGH BAHADUR OF GIDHAOR.

The HON'BLE SURENDRANATH BANERJEE.

The HON'BLE MAULVI SERAJUL ISLAM KHAN BAHADUR.

The HON'BLE W. C. BONNERJEE.

The HON'BLE MAHARAJA JAGADINDRA NATH ROY OF NATOR.

The HON'BLE J. N. STUART.

THE ALUM FESTIVAL.

The Hon'ble MR. W. C. BONNERJEE asked—

Whether the Government will reconsider the decision embodied in its letter No. 788J., dated 6th February, 1894, addressed to the Commissioner of the Patna Division, disallowing the prayer of the Shias of Gaya to carry an *alam* with *mashk* and *tir* in their processions and allow them to carry these emblems in the next Muharram and Chehloom processions, directing the local officers to take proper safeguards for the preservation of the peace?

The Hon'ble MR. COTTON replied :—

"In the town of Gaya the Shias number only 150 to 200 souls, while the number of Sunnis is about 10,000. The Sunni community entertain a deep-rooted aversion from the use of symbols in any form, and especially to the exhibition of the symbols of the *mashk* and *tir* with the *alam* in the Muharram procession. It is unnecessary to consider the grounds of this aversion: it exists, and the fact remains that in 1882, when the procession with these emblems was permitted, a disturbance took place which was only quelled by the interference of a large body of police. Since that year the executive authorities in the exercise of their legal powers have prohibited the carrying of these emblems in public procession, and this prohibition has been annually enforced. During the past two or three years there has been an active agitation on the part of the Shias to rescind the prohibition, and the whole subject has been fully reported on by the local officers and has been carefully considered by Government. The final orders of the Lieutenant-Governor were contained in my letter No. 798J., dated 6th February, 1894, to the address of the Commissioner of Patna, in which it was laid down that no change in the established procedure could be allowed in Gaya or elsewhere. The Lieutenant-Governor is convinced that the principle of withstanding innovations must be maintained. Moreover, the emblems, if allowed at all, would have (as is admitted in the terms of the Hon'ble Member's question) to be conducted under a special guard appointed for the purpose. This the Lieutenant-Governor cannot permit, and the Government adheres to the principle laid down in my letter quoted that no community has a right to carry out religious observances in public which are not sanctioned by continuous usage, which offend another community, and which would lead to riot if not protected by the strong arm of the police.

"For these reasons the Lieutenant-Governor declines to reconsider the orders prohibiting the carrying of these emblems in public procession in the town of Gaya."

EXCHANGE COMPENSATION ALLOWANCE TO EURASIAN CLERKS.

The Hon'ble BABU SURENDRANATH BANERJEE asked—

Will the Government state if it is a fact, as stated in one of the newspapers, that in the returns which are prepared from time to time showing the respective number of Europeans and Natives in Government service, it is the usual practice to include Eurasian clerks under the head of "Natives?" Whether, as stated in the same newspaper, among the Eurasian clerks who are shown as "Natives" in the returns referred to above, there are not some who have been drawing exchange compensation allowance?

The Hon'ble MR. BOURDILLON replied:—

"The Lieutenant-Governor has not seen the newspaper statement to which the Hon'ble Member alludes, and cannot therefore say to what returns reference is made; no returns answering to the description given are prepared by or under the orders of the Government of Bengal. The figures given by the Chief Secretary in reply to a question by the Hon'ble Member on the 9th February last referred only to superior officers, and did not include clerks. The Hon'ble Member may, however, rest assured that no official is granted exchange compensation allowance who has not established the fact that he has a European domicile."

RESETTLEMENT OF LAND REVENUE AND AMENDMENT OF BENGAL TENANCY ACT, VIII OF 1885.

The Hon'ble MR. BUCKLAND said:—"It will be in the recollection of the Council that on the 28th of April last I introduced into Council a little Bill to remove doubts which have arisen in connection with the resettlement of land revenue in temporarily-settled areas, and to amend the Bengal Tenancy Act, VIII of 1885. On that occasion I said that nothing further would be done at that moment than to read the Bill in Council and to circulate it for opinion, and that later on it might be necessary to appoint a Select Committee to deal with any opinions and criticisms which might be received, and to consider any suggestions which might be made. The Bill was read without discussion, but a number of reports have since been received from Associations and others interested in the measure, and it is now my duty to refer the Bill to a Select Committee for the consideration of those reports. I therefore move that the Bill to remove doubts which have arisen in connection with the resettlement of land revenue in temporarily-settled areas, and to amend the Bengal Tenancy Act, VIII of 1885, be referred to a Select Committee consisting of the Hon'ble Messrs. BOURDILLON, WILKINS and GHOSE, the Hon'ble MAULVI SERAJUL ISLAM KHAN BAHADUR, the Hon'ble MAHARAJA JAGADINDRA NATH ROY OF NATOR, and the Mover.

The Motion was put and agreed to.

The Hon'ble the PRESIDENT said:—"There is no other business before the Council to-day, but I may mention now that I hope the members of the Select Committee will be able to arrange to meet at a very early date for the purpose of considering the Bill. As far as I am aware, the Bill contains no contentious provisions or matters to which objection is likely to be taken on principle. The only question, as far as I know, which is likely to arise would be possible emendations of language, which may be suggested by the Legislative Department or by our legal experts in Council. In that case, if our anticipations are fulfilled, I hope the Report of the Select Committee will be at once laid before the Council, and that the Council will meet again on Saturday next to consider and pass the Bill. If no objection is taken to the Bill, I presume it will be convenient for hon'ble members to pass this Bill at once next Saturday, and in that case I do not think it will be necessary to summon the Council again for any further business during this summer session."

The Council adjourned to Saturday, the 14th instant.

GORDON LEITH,

Assistant Secretary to the Govt. of Bengal,
Legislative Department.

CALCUTTA;
The 10th July, 1894.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 7th July, 1894.

Statistical Department,
The 7th July, 1894.

C. E. Buckland,
Secy. to the Govt. of Bengal.

Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of June 1894.

	Inches.	Date.	Hour.
The mean pressure of the month	29·534		
The average pressure of June from 24 years' registers ...	29·549		
The highest pressure in the month	29·708	10th	10
The lowest pressure in the month	29·358	14th	16
The range of pressure	0·350		
	Hours.		
The total number of hours of bright sunshine during the month	124·8		
The maximum possible number of hours of sunshine ...	403·4		
	⊖		
The mean temperature of the month	84·0		
The average temperature of June from 24 years' registers ...	85·0		
The highest temperature in the month	96·9	2nd	
The lowest temperature in the month	72·4	8th	
The range of temperature during the month	24·5		
The mean daily range of temperature	11·9		
The greatest range of temperature in one day	20·3	2nd	
	Per cent.		
The mean humidity of the month	84		
The average humidity of June from 24 years' registers ...	81		
	Inches.		
The mean vapour tension of the month	0·978		
The average vapour tension of June from 9 years' registers ...	0·998		
The mean cloud proportion of the month	7·14		
The average cloud proportion of June from 17 years' registers	7·05		
The total rainfall of the month	10·23		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	8·94?		
The average fall of June from 48 years' registers ...	12·08		
The greatest fall in 24 hours	1·90	29th	
	Days.		
The number of rainy days in the month	22		
The average number of rainy days in June from 24 years' registers	19		
The mean maximum equilibrium temperature of solar radiation during the month	⊖ 144·9		
The mean difference of sun and air temperatures	54·8		
The greatest sun temperature	156·6	3rd	
The greatest excess of sun over air temperature	63·9	24th	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	76·7		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	1·6		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	2·9	1st & 12th.	
	Miles.		
The mean movement of the wind per day	112·7		
The greatest movement of the wind in one day	270·0	7th	
The greatest movement of the wind in one hour	21·0	7th	1 to 2 P.M.

The number of hours with winds from each of the 8 points—
N. 8, N.E. 18, E. 32, S.E. 106, S. 219, S.W. 217, W. 63, N.W. 14, Calm 43.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0·5 higher; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

J. H. GILLILAND,

For Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 9th July 1894.

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns wanting the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at 0·10 inch of rain has fallen.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 7TH OF JULY 1894.

At the close of the previous week a very feeble barometric depression had formed in the north of the Bay, and on Saturday, the 23rd, or the last day of that week, it had advanced into the north-west angle and its centre was close to Balasore, and a little to the east of it. With the advance of the small depression monsoon winds were again beginning to blow freely over the Province, and hence general rain was being received. On the 1st of July, or the first day of the week under review, the depression had to a great extent advanced inland, while it remained extremely feeble, and the lowest pressure was reported at Calcutta, while there was also a badly defined cyclonic circulation of winds over South-West Bengal. On the 2nd the lowest pressure was reported from Rampur-Boalia, and round this as a centre winds were again circulating feebly in a cyclonic form, but there was scarcely sufficient evidence to say that any barometric depression existed over this area on this day. On the 3rd again pressure was relatively low over the east of Bihar and part of North Bengal, and a moderate fall of pressure had occurred, while winds showed a tendency to circulate round a centre probably near Malda, so that a very feeble, but not very definite, barometric depression appears to have existed over the east of Bihar on this day. On the 4th the lowest pressures were reported at Patna and Arrah, where pressure was nearly a tenth of an inch in defect, and the feeble depression had apparently moved in a west-north-westerly direction, and hence pressure was falling in the western districts, while it was rising moderately to rapidly at the central and eastern stations. The circulation of winds accompanying the feeble depression was, however, by no means definite. On the 5th the feeble low pressure area had apparently passed away from the Province, and pressure was rising briskly at all stations, though it was still in slight defect in the west and centre of the Province. No true circulation of winds, however, was recorded on this day. On the 6th a further slow increase of pressure occurred, and pressure became in slight excess in all districts, while on the 7th pressure had again generally increased, though a fall was commencing at the western stations, but still pressure was in excess in practically all districts. Hence during the last two days of the week the depression had quite disappeared, and conditions as to pressure were becoming decidedly less favourable for the free advance of the monsoon winds over the Province, and hence less favourable also for heavy rainfall.

It will therefore be seen that at the beginning of the week a feeble barometric depression passed into South-West Bengal, where apparently it filled up, and that two or three days later another very feeble depression formed more in the centre of the Province. Hence with the monsoon current brought up by these depressions and by the indraught towards them, a rather strong monsoon has been blowing over Bengal almost up to the close of the week, and conditions have again been very favourable for rainfall. Indeed, in all divisions except Orissa, the falls for the week have been largely in excess—the falls in such divisions as South-West Bengal, East Bengal, and Chota Nagpur being about double as large as usual.

Pressure.—The variations of the average pressure for the week from the normal have not been large, and at all stations except one or two in Orissa defects have been recorded. The usual defects range from 0·015″ to 0·035″, and they have been usually largest at the south-western and central stations. In Assam the average defect has been 0·025″.

Temperature has been comparatively low throughout the week, and for the whole of Bengal a defect of practically one degree has been registered. In Assam the average defect in the mean temperature has equalled 0·9°.

Rainfall.—The heavy average fall of nearly eight inches has been reported from East Bengal, while falls of between five and six inches have been recorded in South-West and North Bengal and Chota Nagpur. In Bihar the falls have averaged nearly four inches, while the falls have been comparatively scanty in Orissa, where the average amount of only 1·90 inches has been registered. Expressed as percentages of the normal rainfall, the actual falls during the week have equalled the following amounts:—South-West Bengal 200 per cent., North Bengal 137 per cent., East Bengal 217 per cent., Bihar 118 per cent., Orissa 79 per cent., and Chota Nagpur 190 per cent. Considering each division to have an equal value in the calculation, the rainfall of Bengal for the week has equalled 157 per cent.

In Assam, Dhubri has received 2·55 inches of rain during the week, Silchar 7·14 inches, and Sibsagar 1·65 inches.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 7th of July 1894:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1894.

	Inches.
The total fall of rain from 1st to 7th July 1894	4·31
The average fall of the corresponding period for 24 years, Surveyor-General's Office	3·11
The total fall from 1st January to 7th July 1894	22·82
The average fall of the corresponding period for 24 years, Surveyor-General's Office	24·58

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h., 10h., 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers; t, thunder; ≤, lightning.

WATER-WORKS AT HOWRAH.

The Hon'ble MR. GHOSE asked—

1. Whether the site of the intake of the proposed Howrah Water-Works is not within a distance of about 60 yards from a largely-frequented public ghât, and whether, within a distance of 400 yards from the intake, there are not

several other ghâts, and whether it is the fact that within that distance from the intake some 3,000 coolies employed in the India Mill are in the habit of bathing daily?

2. Whether for three miles above the proposed intake the shore is not lined with a succession of bathing ghâts at which the inhabitants of the towns of Baidyabati, Sheorapholi, Chattra, and Serampore, amounting to 30,000 persons or thereabouts, bathe daily, and whether it is the fact that there are no public ghâts for a considerable distance above and below the intake of the Calcutta Water-Works at Fulta?

3. Whether complaints as to the insanitary state of the foreshore within 400 yards of the intake have been recently made to the Serampore Municipality; and whether, if cholera breaks out among the persons bathing, there is not a reasonable probability of the germs being transmitted to Howrah; and whether it is the fact that Dr. Simpson, the Health Officer of the Calcutta Corporation, has advised against the scheme on sanitary grounds, and suggested a site higher up the river, and whether the Government proposes to take any, and if so what, steps in the matter?

The Hon'ble Mr. Bourdillon replied:—

"The Lieutenant-Governor is informed that there is a largely-frequented bathing ghât about 60 yards above the intake of the proposed Water-Works at Serampore, and that there are three or four other ghâts within some 400 yards of the spot.

"The facts stated in the second paragraph of the Hon'ble Member's question are substantially correct; but although it is believed that there are no bathing ghâts in the immediate vicinity of the Fulta Water-Works, there are many of them within three miles above and below the intake at that place.

"As regards the third question, it has been ascertained that an objection was made in January last by the Civil Medical Officer of Serampore to the effect that the river bank was being polluted: the nuisance was immediately put a stop to. Government is not aware of any other complaints of this character. Whether cholera is likely to be conveyed from Serampore to Howrah through the Water-Works, the Lieutenant-Governor cannot pretend to say. It is not the fact that the Health Officer of Calcutta has advised on sanitary grounds against the scheme of an intake at Serampore, or suggested a site higher up the river.

"The Government does not propose to interfere with the arrangements already in progress. I may inform the Hon'ble Member that the mouth of the pipe through which the water is drawn is 100 feet away from the river bank and 10 feet below the surface at low water. The water at this point has been analysed and shown to be a sufficiently good potable water, and it will pass through settling and filtering tanks before transmission to Howrah. Lastly, if Serampore were abandoned as the site of the water-works, they would have to be moved some six miles up the river, and the additional cost would be fatal to the whole project."

DACOITY AT KHURDA.

The Hon'ble Babu Surendranath Banerjee asked—

Has the attention of Government been called to the disturbed state of the villages lying within the jurisdiction of the Khurda thana in the sub-division of Barrackpore, to the case of dacoity at Patali, and to the cases of theft and burglary which are of frequent occurrence in the neighbourhood?

Whether any representations have been made in this connection to the District Magistrate, and what action, if any, has been taken upon those representations?

The Hon'ble Mr. Cotton replied:—

"On receipt of the Hon'ble Member's question the Lieutenant-Governor caused enquiries to be made and has ascertained that a dacoity occurred last month at Patali, and is still under enquiry. There has been a slight increase in the number of thefts and burglaries reported in the Khurda thana during the first six months of the current year, the number being 41 against 35 during the corresponding period of 1893.

"The District Magistrate has received various representations on this subject, and proposals for the improvement of police arrangements in Khurda are under his consideration. In the meantime, extra constables have been deputed to that thana for patrol duty."

MUHARRAM PROCESSION AT CALCUTTA.

The Hon'ble MR. GHOSE asked—

Whether on Monday last, the 9th instant, between 9 and 10 P.M., some of the streets of Calcutta, including Circular Road, from the corner of Harrison Road to the junction of Theatre Road, were not occupied by successive groups of *Muharram akharas*, not being processions passing along the streets, but stationary crowds occupying the entire width of the road and forming a ring, in the centre of which performances were going on with *lathies* and lighted torches, entirely blocking the traffic to the great inconvenience of passengers and causing imminent danger to persons driving along the road?

Whether a certain number of constables were in attendance upon each of these *akharas* without taking any steps to make them pass on, and whether the permission given by the Police authorities referred only to processions passing along the road, or whether such permission actually sanctioned the occupation of the road at various points by the different *akharas* for the purpose of the said performance?

Whether, having regard to the fact that a sufficient number of suitable places, such as squares and waste lands besides the *maidan*, are available for the purpose of such performances, the Government will consider the desirability of prohibiting such performances taking place in the public thoroughfares?

The Hon'ble MR. COTTON replied:—

"By notification dated the 5th July, 1894, issued under the provisions of section 62 of Act IV (B.C.) of 1866, and section 39 of Act II (B.C.) of 1866, the Commissioner of Police granted licenses for processions with music on account of the celebration of the Muharram in the Town and Suburbs of Calcutta on Monday, the 9th instant, between the hours of 9 P.M. and 10 P.M. The *akharas* referred to by the Hon'ble Member formed part of the procession and passed along the routes prescribed. Such processions are allowed to halt at intervals for the purpose of mimic warfare. About 450 licenses have been issued to take out processions during the present Muharram.

"The practice is to tell off a certain number of policemen to accompany each *akhara*, but the orders issued to the Police forbid interference except to maintain order and to ensure that the route and hours prescribed are duly observed.

"It has been established by long custom that these processions shall proceed by certain routes to enable them to visit shrines and other places held in veneration. It would not be possible therefore to restrict such processions to squares and waste lands or to the *maidan*. The above usage applies not only to Muharram processions, but to other assemblies and processions, which take place annually in the Town and Suburbs of Calcutta, and on such occasions the temporary obstruction of ordinary traffic in certain public thoroughfares is unavoidable: but intimation is always given to the public by notifications previously issued."

RE-SETTLEMENT OF LAND REVENUE AND AMENDMENT OF BENGAL TENANCY ACT, VIII OF 1885.

The Hon'ble MR. BUCKLAND, in presenting the Report of the Select Committee on the Bill to remove doubts which have arisen in connection with the resettlement of land revenue in temporarily-settled areas, and to amend the Bengal Tenancy Act, VIII of 1885, said:—"A very few words of explanation are needed. I may say at once that the meeting of the Select Committee appointed at our last sitting was not a long one, but we discussed the Bill thoroughly, and removed what might have been considered to be the only contentious matter. I think I may say that the Bill as it now stands is free from any possible objection. We have made a few verbal amendments with the intention of making the object of the Bill more clear. In the preamble we have introduced

some words so as to make it plain that the Bill applies to Government estates, as the expression 'temporarily-settled areas' has hitherto been held, in Bengal Revenue literature, as not necessarily including Government estates. There is really no alteration of principle by the introduction of these words. In the second section we have made a slight alteration in the language so as to show that new rents settled shall not take effect until the date upon which the new settlement of land revenue comes into force. The change was made to meet a criticism offered by one of the Associations to whom the Bill was sent for the favour of their opinion. A material change has been made in what now stands as the second proviso in the second section of the Bill. The Bill as originally presented to the Council on the 28th April last contained a proviso that Government might direct a revision of rents under certain circumstances. The words 'under certain circumstances' did not appear; but, as I explained at the time, the intention was that Government could apply for revision of rents when mistakes had been made, either by fixing notoriously low rents or oppressively high rents, by inexperienced Settlement Officers. It came to the notice of Government that, by some extraordinary misconception, objection was taken to this proviso, and at the instance of Government the Select Committee have, on my suggestion, withdrawn the words which stood in the original Bill. The object of the Government may be stated briefly to have been as follows. It was intended that power should be given to the Government to direct a judicial revision by another Revenue Officer of rents which have been judicially fixed by a Revenue Officer, when circumstances such as the fixing either of notoriously low or oppressively high rents by subordinate officers came to light after the right of appeal had lapsed. It was intended by these means to rectify the mistakes of inexperienced officers, and the phrase used that such revision should be fair and equitable was intended to imply the exercise of judicial procedure on the part of the revising Revenue Officer. There was never any intention on the part of Government to interfere by the exercise of final executive authority to revise rents which had been settled judicially. But as this strange misunderstanding has come to light, these words have been withdrawn. The intention of Government is now that such mistakes shall not be allowed to occur; by a careful selection of Settlement Officers, and their Assistants, by adequate supervision of the Settlement Officer over his subordinates, and by exercise of the right of appeal within the 30 days allowed, it is hoped to obviate the necessity for any such provision. It is quite possible that it may be hereafter found necessary to make some such provision for the rectification of mistakes. The result will be for the present that when mistakes have been made there will be no legal power for getting rents reduced or otherwise altered, but the omission of these few words removes, as I have said, all contentious matter from the Bill. The intention of the Government, that the revision of rents shall be by judicial procedure in the cases when it is to be allowed on the application of landlord or tenant under special circumstances, has been made more clear by the addition of a few words to the end of section 2, to the effect that the provisions of Chapter X of the Bengal Tenancy Act shall apply in this connection, and an explanation has been added to show that the settlement of land revenue includes the settlement of rents in Government estates. I ought to mention that in Select Committee a little point was raised which led to some little discussion. It was suggested that as power had been given to revise rents on the application of landlords and tenants under special circumstances, such as the occurrence of cyclones, diluvion, or other convulsions of nature, we ought to take power at the same time to provide for the revision of the land revenue which would follow necessarily on the revision of rents. We discussed the matter and came to the conclusion that, as this little Bill only deals with the settlement of rents, and not with the settlement of land revenue, and as it is perfectly certain that the Revenue Settlement Officers will take cognizance of such revision of rents as are effected under such circumstances, it would be out of place in this Bill to introduce any provision in regard to the revision of revenue settlements entailed by the revision of rents in these particular circumstances. I promised the Select Committee that I would mention the matter in order that it might be placed on record, and I have fulfilled my pledge accordingly."

The Hon'ble Mr. Buckland also moved that the Report of the Select Committee on the above Bill be taken into consideration by the Council, and that the clauses of the Bill be considered for settlement in the form recommended by the Select Committee.

The Motions were put and agreed to.

The Hon'ble MR. BUCKLAND, in moving that the Bill, as amended by the Select Committee, be passed, said:—"I think the Council will hardly desire any recapitulation of the main objects of the Bill—certainly not at any length, and I do not propose to detain the Council more than a minute. The principal object of the Bill has been met by section 1, to which I have not adverted this morning, because no change has been made in it by the Select Committee. The Council will remember that the necessity for legislation arose in consequence of the opinion given by our legal advisers that under the existing law the settlement of rents could not be undertaken previously to the expiration of a land revenue settlement. The few words which have been introduced by this Bill into the Bengal Tenancy Act have been considered sufficient by our legal advisers to meet the requirements of the law, so that now the Government will be able to undertake the settlement of rents at any time—two, three, or more years if necessary - before the expiry of the land revenue settlement. But by a later section the new rents will not come into force until the new land revenue settlement takes place. The other provisions of the Bill are merely ancillary to this main object. The last section is an indemnifying section, as it were, to validate what had been previously done on a possibly erroneous understanding of the law. I now beg to move that the Bill, as amended, be passed.

The Motion was put and agreed to.

ADJOURNMENT OF COUNCIL.

The Hon'ble THE PRESIDENT said:—"There will be no further business to lay before the Council in the present autumn session, but I conceive that we shall have some important business to discuss when we meet again in the winter time."

The Council adjourned *sine die*.

GORDON LEITH,
Assistant Secretary to the Govt. of Bengal,
Legislative Department.

CALCUTTA;
The 17th July, 1894.

DISTRICT ROAD FUND.

No. 3484R.C.

GOVERNMENT OF BENGAL, PUBLIC WORKS DEPARTMENT.

Road Cess.

Dated Calcutta, the 7th July 1894.

RESOLUTION.

Read—

Letter from the Accountant-General, Bengal, No. 272L.F., dated 28th June 1894, submitting an abstract of receipts and expenditure of the several District Road Committees in Bengal for the quarter ending 31st March 1894.

RESOLUTION.—The Lieutenant-Governor directs that the accounts of the receipts and expenditure of the several District Road Committees in Bengal for the 4th quarter of the year 1893-94 be published in the *Calcutta Gazette* and circulated to the officers concerned.

ORDER.—Ordered that a copy of this Resolution, together with a copy of the abstract of receipts and expenditure, be published in the Supplement to the *Calcutta Gazette*.

Ordered also that a copy of this Resolution and of the abstract referred to, be forwarded to the Commissioners of the Rajshahi, Chittagong, Bhágalpur and Chota Nagpur Divisions, to the Superintending Engineers of the Northern and Western Circles, to the Inspector of Works, Eastern Circle, and to the Financial Department of this Government, for information.

By order of the Lieutenant-Governor of Bengal,

J. H. TOOGOOD,
Under-Secretary.

			Bangaon ... ... 10 to 13 0 }
11	Khulna „ 14, '94	0·94	Weather—rainy. Transplantation of *aman* rice going on. Condition of standing crops fair. Fodder and water sufficient. Common rice sells from 10 to 12 seers per rupee.
	Bagerhat ...	5·68	
	Satkhira ...	5·84	

No.	District and date of return.	Rainfall at Sadar Station in inches	Character of the weather and state and prospects of the crops.
BENGAL—*concld.*			
Rajshahi Divn. 12	Rajshahi July 14, '94	Not reported.	Weather—dry, but seasonable. State and prospects of crops good. Dry weather has done great good. Water and fodder-supply ample. No cattle-disease. Rice selling from 8½ to 12 seers per rupee.
	Nator ...	3·46	
	Naugaon ...	5·46	
13	Dinajpur „ 14, '94	1·66	Weather—very hot and cloudy with occasional rain. The outturn of *bhadoi* and jute is expected to be 16 annas. Rain is wanted now for the transplantation of winter rice in some parts of the district. Condition of cattle good. Fodder and drinking water sufficient. Rice is selling from 12 to 14 seers per rupee.
	Thakurgaon ...	1·59	
14	Jalpaiguri „ 14, '94	4·87	Weather—hot and cloudy. Prospects of jute and *bhadoi* paddy favourable. Transplantation of *haimanti* paddy going on. Rain much wanted. Common rice sells at— Srs. Sadar ... ... 12½ / Alipur Duars ... ... 10 } per rupee. Fodder and water abundant.
15	Darjeeling „ 14, '94	3·28	Weather—bright and dry in the hills, cloudy in the plains. *In the hills* :—*Bhutta*, potatoes, *shama* and *marua* are ripening. *Aghani* paddy and *bara marua* are being transplanted. *In the Terai* :—Standing crops doing well. Transplantation of *aghani* paddy begun. Prices of coarse rice :— Srs. Hills ... ... 8 to 13 / Terai ... ... 11 to 13 } per rupee.
	Siliguri ...	4·43	
16	Rangpur „ 14, '94	0·17	A few light showers have fallen during the week. Transplantation of *aman* retarded for want of rain. Rain is greatly needed for the young *aman*. Jute is below average in Gaibanda. *Aus* will be an average crop. Price of common rice 10 to 13 seers per rupee.
	Nilphamari ...	2·23	
	Kurigaon ...	Nil	
	Gaibanda ...	2·08	
17	Bogra „ 14, '94	2·88	Weather—hot and cloudy. Transplantation of lowland paddy continues. Rain very much wanted. Prospects of standing crops not yet unfavourable. Fodder and water sufficient. Price of rice stationary (12 seers per rupee).
	Sherpur ...	8·43	
	Naukhila ...	5·45	
18	Pabna „ 14, '94	4·14	Weather—cool and seasonable. Copious rainfall and prospects of crops continue favourable, though some of the late *aus* rice has been flooded in Sadar. Common rice selling at 11 seers per rupee both at Sadar and at Sirajganj. Fodder and water-supply sufficient.
Dacca Divn. 19	Dacca „ 14, '94	Not reported.	Weather—cloudy and rainy. Harvesting of jute and *aus* rice going on. Prospects good. Fodder available. Common rice selling from 8 to 10½ seers per rupee. No cattle-disease.
20	Mymensingh „ 14, '94	3·84	Weather—fair and hot. Prospects of standing crops good. *Aus* is being harvested, and the outturn is expected to be 16 annas. Common rice sells at 10 seers per rupee. Fodder and water available. Condition of cattle good.
21	Faridpur .. 14, '94	3·50	Weather—seasonable. *Aman*, jute and sugarcane all doing well. Common rice sells at— Srs. Sadar ... ... 9½ / Madaripur ... ... 10½ / Goalundo ... ... 11 } per rupee. Cattle get fodder.
22	Backergunge „ 14, '94	0·35	Weather—seasonable. Prospect of crops fair. Sowing or transplanting of *aman* has begun. Common rice sells at 9 to 12 seers per rupee. Fodder and water-supply sufficient.
	Bhola ...	4·78	
	Pirojpur ...	2·97	
	Patuakhali ...	6·25	
Chittagong Divn. 23	Tippera „ 14, '94	2·06	Weather—seasonable. *Aus* is now being harvested in most places. It is a bumper crop. Prospects of standing crops excellent. Small quantities of jute are being cut. Price of rice falling slightly :— Srs. Sadar— Kotwali ... ... 10 / Laksham ... ... 11 1/16 / Brahmanbaria— Nabinagar ... ... 9 15/16 / Brahmanbaria ... ... 12¼ } per rupee. Chandpur— Haziganj ... ... 10⅛ / Chandpur 10¾
24	Noakhali „ 14, '94	1·06	Weather—seasonable. *Aus* crop is being harvested; prospects very good. Land is being prepared for sowing of *aman*. No cattle-disease. Fodder and water sufficient. Common rice selling at— Srs. Sadar ... ... 10¼ / Feuny ... ... 10½ } per rupee.
25	Chittagong „ 14, '94	3·12	Weather—warm and cloudy with occasional showers. Cultivation for *aman* and transplanting of *aus* continue; but more rain is wanted. Prospects fair. Prices steady. Water and fodder sufficient.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR.			
PATNA DIVISION.			
26	Patna July 14, '94	2·28	Weather—hot. Prospects of *bhadoi* and rice are very favourable, the break in the rains being very opportune for the seedlings. Transplanting of *marua* and early rice in progress. Fodder and water for cattle ample. Prices nearly normal. Common rice sells at—
	Barh ...	1·62	
	Bihar ...	4·35	
	Dinapore ...	4·17	
27	Gaya „ 14, '94	3·89	Weather—cloudy and rainy at the beginning; fair and warm at the end of the week. Agricultural operations in progress. Common rice sells from 13¼ to 16 seers per rupee. Fodder and water-supply ample.
	Jahanabad ...	2·18	
	Aurangabad ...	0·74	
	Nawada ...	1·44	
28	Shahabad „ 14, '94	3·72	Weather—finer towards the end of the week. *Bhadoi* and winter rice sowings continue and transplantation going on. Prospects good so far.
	Buxar ...	5·67	
	Sasaram ...	1·38	
	Bhabua ...	2·39	
29	Saran „ 14, '94	3·12	Weather—clear and seasonable. The week's sunshine has been very beneficial for *makai* which is being now weeded. Transplanting of paddy going on favourably. Water and fodder plentiful. Prices of common rice:—
	Siwan ...	Not reported.	
	Gopalganj ...	1·54	
30	Champaran „ 14, '94	0·30	Weather—hot. Rain stopped. Agricultural operations in full swing. *Makai* and other *bhadoi* crops doing well. Prospects favourable. Harvesting of indigo in progress. Common rice selling at 13½ seers per rupee.
31	Muzaffarpur „ 14, '94	1·59	Weather—hot and occasionally cloudy. Prospects continue fairly favourable. Rain urgently wanted for rice transplantation. Standing crops promise well. No cattle-disease. Fodder and water sufficient. Price of common rice normal.
	Hajipur ...	2·26	
	Sitamarhi ...	0·80	
32	Darbhanga .. 14, '94	0·67	Weather—very hot and close. Rain holds off since the last six days, and the transplanting of *marua* is impeded for want of rain. Indigo manufacture continues. Supply of fodder for cattle sufficient. Price of common rice ranges from 13½ to 14 seers per rupee.
BHAGALPUR DIVISION.			
33	Monghyr „ 14, '94	3·23	Weather—hot and cloudy with occasional rain. *Marua* and paddy are being transplanted. Prospect of *bhadoi* crops fair. Indigo and sugarcane doing well. Weeding commenced. Fodder and water sufficient. Prices of common rice:—
	Begusarai ...	3·53	
	Jamui ...	8·68	
34	Bhagalpur „ 14, '94	6·39	Weather—very hot early in the week; later fine and hot. In places too much rain has injured indigo and *makai*. Generally prospects are good. Prices normal. Prices of common rice 13⅞ to 16¼ seers per rupee. Fodder and water sufficient.
35	Purnea „ 14, '94	1·86	Weather—clear and very hot. *Bhadoi* and jute in good condition. Transplantation of *aghani* paddy has commenced in low lands. More rain wanted for transplantation on high lands. No cattle-disease. Fodder and water sufficient. Price of common rice 14 seers per rupee at an average.
	Kishanganj ...	2·24	
	Araria ...	2·67	

	Srs.	
Sadar	15	per rupee.
Barh	13	
Bihar	15	
Dinapore	15	

	Srs.	
Chapra	12	per rupee.
Siwan	Not reported	
Gopalganj	13	

	Srs.	
Sadar	12 to 15	per rupee.
Begusarai	13 to 14	
Jamui	14¾	

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops
BIHAR—*concld.*			
Bhagalpur Dtvn.—*concld.* 36	Malda July 14, '94	Not reported.	Weather—first part of the week cloudy and damp, latter part hot and clear. There has been ample rain. Transplantation of winter rice begun. *Bhadoi* crops and indigo on diara lands have been a little injured by rise of rivers. Ordinary rice selling from 12 to 17 seers per rupee. Fodder and water for cattle sufficient.
	Chanchal ...	1·46	
	Shibganj ..	5·12	
	Gazole ...	3·23	
37	Sonthal Parganas „ 14, '94	3·60	Weather—seasonable. *Makai* is said to have suffered a little, but rice is doing well. Transplanting progressing. Average price of rice 14 seers per rupee.
	Deoghur	6·84	
	Godda ...	2·50	
	Jamtara ...	7·49	
	Pakur ...	3·25	
	Rajmahal ...	3·29	
ORISSA.			
Orissa Dtvn. 38	Cuttack „ 14, '94	1·51	Weather—fair with showers occasionally. *Beali* and *sarad* doing well. Some of the low-lying land is uncultivated being under water. State of miscellaneous crops good. Fodder sufficient. Common rice sells at:— Sadar ... ... Srs. 9 c. 3 to Srs. 11 c. 9; Kendrapara ... ... 10 8 to 13 0; Jajpur ... ... 10 0 to 11 13; Banki ... ... 14 0 — per rupee.
39	Balasore „ 14, '94	2·05	Weather—cloudy and hot. Sowing still not quite finished. Good reports of the young crop and of ample rain from all parts of the district. Prices of common rice:— Balasore ... ... Srs. 14; Bhadrak ... ... 16 — per rupee.
40	Puri „ 12, '94	1·46	Weather—cloudy with showers of rain. Sowing of *sarad* still continues in places. Puddling going on in other places. *Beali* being weeded. Miscellaneous crops doing well. Rice sells from 11 to 15¼ seers per rupee.
	CHOTA NAGPUR.		
	South-West Frontier Agency.		
Chota Nagpur Dtvn. 41	Hazaribagh July 14, '94	3·49	Weather—seasonable. Sowings are approaching completion in most places. Good progress has been made in transplanting *marua*, and transplanting of winter rice has commenced. All crops promise well, except that excessive rain has done some damage to *marua* and Indian-corn in places. Prices normal. Common rice 12 to 13½ seers per rupee. Fodder and water sufficient.
42	Lohardaga ...	...	Report not received.
43	Palamau „ 12, '94	2·45	Constant showers of rain, but the weather shows signs of clearing up. Paddy is being sown. *Bhadoi* sowings have been retarded by the constant rain, and the crop will probably be a short one. Rice selling at 15 to 22 seers per rupee.
44	Manbhum „ 14, '94	5·41	Weather—rather rainy with strong wind on 10th and 11th. *Gora* paddy doing well. *Bhadoi* crops and winter paddy seedlings thriving. Fodder sufficient. Price of rice 10 to 14 seers per rupee.
	Govindpur ...	7·01	
45	Singhbhum „ 14, '94	2·23	Good rain. Crops doing well.

Published for general information.

ORISSA.

CHOTA NAGPUR.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF JUNE 1894.

At the end of May the pressure distribution over Bengal had been a little abnormal, and pressure had become slightly low in the Bay, but in the early part of June this abnormal distribution passed away, and the seat of lowest pressure was transferred to the north-western stations of the province, and ordinary hot weather conditions set in. Owing to the pressure changes of the first five days of June, pressure became decidedly low at the western stations, and on the 5th a very distinct low pressure area existed over the west of Bihar, while elsewhere pressure was nearly normal. With the occurrence of this feeble depression the local storms with rain which had been previously confined to the eastern half of the province extended in a westerly direction, and from the 5th numerous rain-showers were reported in all divisions except parts of Bihar. The depression in the west of Bihar, however, quickly filled up, but left pressure in a rather disturbed state, and hence these rain-showers continued numerous up till the 9th, though comparatively few were reported on the 10th instant.

During this period certain changes were taking place over the sea area, and feeble monsoon winds, due to the Arabian Sea current, made their appearance on the Malabar coast on the 4th and 5th of June, and then slowly advanced northward along the Bombay coast, and also penetrated partly into the interior. This advance on the whole appears to have been decidedly weaker than usual. In the extreme south of the Bay the first rather strong advance of monsoon winds due to the Bay current occurred on the 1st of June, on which date winds became strong, and light to moderate rain fell at the Ceylon stations. From this date this branch of the monsoon current continued to blow with moderate strength only at the Ceylon stations and at the stations on the South Coromandel Coast, and again on the whole the strength of these winds appears to have been rather smaller than usual. From about the 7th to the 9th of the June this current appeared to be creeping up the east and centre of the Bay, and had probably reached Burma. On about the 9th instant it was approaching the north of the Bay. It had not apparently passed over the south-eastern portions of Bengal to any appreciable extent up to the 9th instant, and the rainfall occurring in the central and western parts of Bengal was practically confined to local showers, though these were decidedly numerous, and the general and heavy rain accompanying the first burst of the monsoon had not occurred.

On the 10th instant the changes were comparatively small. A slight low pressure area existed to the west of Orissa, and this gave rather disturbed weather to Orissa and the surrounding districts on the 10th, so that on the 11th, in addition to the fairly general rain which was falling in the east and north-east of the province, there was also rather general and in some cases decidedly heavy rain in the western and south-western districts. Pressure on the 11th was still abnormal, as it was low in Orissa and probably over the north of the Bay, but from the 12th certain pressure changes brought about the commencement of a small storm, which advanced over Bengal and caused the setting in of the monsoon rains.

On the 12th instant pressure fell rapidly over the whole province, the fall usually equalling an eighth of an inch, and a distinct low-pressure area commenced to develop in South-East Bengal and over the neighbouring parts of the Bay. At the same time the monsoon current in the Bay began to strengthen, and squally weather was reported in the north-east of the Bay. During the next 24 hours this depression concentrated and intensified very rapidly, and became a small cyclonic storm with a centre in the north-east angle of the Bay, not far from Chittagong. Pressure on the 13th had fallen at Chittagong by no less than 0·218″, and the reading was only 29·353″, or nearly a quarter of an inch below the normal. With the formation of the small storm weather became very squally over the north of the Bay, and rather strong winds set in from Akyab northwards, and unsettled rainy weather also immediately commenced over practically the whole province. The small storm did not, however, remain stationary after its formation, but during the evening of the 13th it began to move in a north-westerly direction, filling up partially in its advance. On the morning of the 14th it was very clearly defined between Jessore and Faridpur, and nearer the latter station than the former; but pressure on this day was only 0·15″ below the normal at Jessore and 0·212″ below it at Faridpur, so the small storm had filled up to a certain extent. In its advance inland it brought up with it a heavy wave of monsoon winds, and hence on the 14th rain was reported from practically all the stations in the province. On the 15th the small storm had moved away from the centre of the province, and a low-pressure area with an irregular cyclonic circulation of winds was indicated in the south of Chota Nagpur close to Chaibassa. This was clearly the same storm that had been near Faridpur on the 14th, and hence its line of advance must have been distinctly to the west of south, or almost west-south-westerly from the 14th to the 15th. This is a most unusual direction, and there are only a few cases on record where storms in the rains in India have moved in a decidedly southerly direction. In its movement across Bengal the storm gave moderate to heavy general rain. On the 16th the small storm had again moved away in a westerly direction, and had ceased to affect the province, and in its rear pressure was rising very rapidly over the whole of Bengal. A moderate monsoon flowed in over the province after the storm, and again general rain was reported on the 16th; hence this storm initiated the monsoon rains in both Bengal

and Bihar, and they may be said to have set in over the whole province on the 13th and 14th instants. A noticeable feature was the extremely rapid extension of the monsoon rains over the whole province after they had commenced in the southern districts, and hence, while the rains were only a day or two earlier than usual in setting in over South-West Bengal and Central Bengal, they were at least a week earlier than usual in setting in over Chota Nagpur and Bihar.

The inrush of monsoon winds, however, began to fall off from the 17th, when pressure rose briskly at all except a few of the north-eastern stations, and became rather largely above the normal, the excess usually ranging from 0·09″ to 0·05″, and hence the pressure distribution was rather unfavourable for the continued free advance of the current. The rainfall reported on the 17th was decidedly local in character, and where falls occurred they were usually rather light. Pressure began to fall moderately on the 18th, but it was still in excess over the western half of the province, and the monsoon current continued light, and only local rainfall was reported in all districts except parts of North Bengal, where it was general and rather heavy. Pressure again fell slowly on the 19th, and the distribution became a little abnormal, an excess of 0·02″ being registered in the west of Bihar and Chota Nagpur, while in East Bengal and Assam defects were registered amounting to 0·07″ at Chittagong and 0·09″ at Silchar. Hence the differences of pressure over the province were much smaller than usual, and the western stations reported little or no rain, though fairly general rain was being received at the eastern stations. On the 20th pressure had again fallen over the whole province, the fall being largest in Orissa and over the north of the Bay, and smallest in Assam and Central Bengal, and pressure became below the normal by amounts ranging up to 0·13″ on the Orissa and South Bengal coasts. A distinct cyclonic circulation of winds also set up at the stations round the north of the Bay, and hence it was clear that a barometric depression had formed over this area. On the 20th, as usually happens in such cases, rainfall was again not very general. On the 21st pressure had fallen slowly in Orissa, South Bengal, Chota Nagpur and the west of Bihar, while it had risen elsewhere, the increase being very rapid in Burma, and winds were still cyclonic in direction in the north of the Bay. On this day the feeble barometric depression had developed very slightly only, and it was also advancing towards the north-west angle of the Bay, the centre being probably to the east of False Point. With the advance of the depression conditions became rather more favourable for rainfall, and on the 21st rainfall was almost general, but at the majority of stations it was not heavy. On the 22nd the depression had again advanced slowly in a west-north-westerly direction, and the centre was between Chaibassa and Balasore, but it was still very feeble, and the cyclonic circulation of winds accompanying it was only light to moderate in force. On the 23rd the depression had again moved in a west-north-westerly direction, and was probably to the west of Chota Nagpur, and pressure had continued to fall at the western stations, while a very rapid increase of pressure was taking place over the remainder of the province. The depression had hence practically ceased to affect the province on this day, but it as usual brought up a moderate wave of monsoon winds, which continued to flow over the province in its rear, and hence from the 22nd, general and rather heavy rainfall was again reported in all districts. The small storm continued its north-westerly advance till its centre was not far from Allahabad, where it remained stationary for several days, certainly up to the 27th, and afterwards again moved away in a westerly direction. As usual in such cases there was a strong inrush of monsoon winds towards the depression, and the monsoon flowed steadily over Bengal up till the 27th. Hence for the whole of this period weather in Bengal was of ordinary monsoon character with heavily clouded skies and with frequent and rather heavy rain.

On the 28th of June, however, a slight change took place in the conditions. Pressure distribution became rather abnormal, very considerable defects being registered over the Bay and the south-eastern districts of Bengal, while excess pressure was recorded in Bihar and parts of West Bengal. Winds also fell off rapidly in force at the head of the Bay, and became irregular in direction at the southern stations of Bengal, pointing to a partial cessation or diminution in force of the monsoon current. On the 29th of June a very feeble barometric depression had formed in the north-west angle of the Bay, and winds showed a very distinct tendency to circulate cyclonically round it, though the circulation did not extend over a very large area. The rainfall bearing current by the indraught towards this feeble depression was partially prevented from reaching Bengal, and on the 29th a good many stations reported no rain. It also appeared that the feeble depression was moving in a west-north-westerly direction, and on the morning of the 30th its centre was close to Balasore, and a little to the east of it. The depression had not, however, intensified to any extent, and it was a very feebledisturbance, though it was accompanied with a very distinct cyclonic circulation of winds, but at the land stations winds were decidedly feeble in force. The rainfall reported on the morning of the 30th was again rather local in Bihar and North Bengal, but with the advance of the depression towards and partially over the land, conditions on the 30th had again become favourable for general and rather heavy rain in Bengal. Practically, therefore, for almost the whole of the second half of the month, the monsoon conditions in Bengal were fairly strongly developed, and hence general and decidedly heavy rainfall was received for the greater part of the period and also in all districts.

Pressure.—The pressure distribution in the early part of June was a little irregular, and while defective pressure was usually recorded in the west of the province, slight excess pressures were recorded in the south-eastern districts. With the changes which occurred

during the formation of the small storm whose advance brought up the monsoon rains to Bengal, the conditions became almost reversed, and thus in the week ending the 16th of June, Chittagong showed a defect of 0·03," while the northern stations were usually in excess, and in such cases as Dhubri and Purnea the excess also equalled about 0·03". Again, in the week ending the 23rd of June, the distribution of pressure was considerably modified by the passage of the depression through the south-western districts of the province, which showed defects ranging up to 0·06" and 0·07", while over the greater part of the province the pressure was almost normal. In the last week of the month the variations of the pressure from the normal were small, but slight defects of 0·02" to 0·04" were usually registered.

For the whole month therefore the mean pressure was in slight defect only, the extreme variations being defects of about 0·03" at the stations in Chota Nagpur on the one hand, and in parts of South-East Bengal on the other, while at the central and northern stations pressure was below the normal, usually only by a few thousandths of an inch, and at many stations the variation was smaller than a hundredth of an inch. In Assam the defect has averaged 0·013" only.

Temperature.—At the beginning of the month the mean temperature was decidedly below the normal in the east of the province, though considerable excess temperatures were registered at the central, northern and western stations. In the week ending the 16th instant, temperature was generally in slight to moderate defect, the mean variation being a deficiency of 1·5°.

In the third week, that is after the commencement of the rains, excess temperatures were registered in North and East Bengal, where the rainfall was less than usual, while moderate defects were registered elsewhere; and in the fourth week of the month, owing to the heavy rainfall, the mean average temperature was nearly a degree below the normal.

For the whole month the variations of the mean temperature from the normal have been small, and slight excess temperatures have been registered at the north-eastern stations and slight defects elsewhere. The variations are, however, particularly small, and at the great majority of stations they are less than a degree, and in a few cases only they equal a degree and a half.

This variation has to a great extent been spread over both day and night temperatures, for both maximum and minimum temperatures have been in excess at the north-eastern stations in the province, while defects have been registered elsewhere. Again, in no case does the variation of either day or night temperatures at any station in the province equal as much as two degrees, and they are generally less than a degree; but on the whole the variations of the minimum temperatures from the normal are slightly smaller than the variations of the maximum temperatures.

Rainfall.—The actual rainfall during June has varied from between 20 and 30 inches in and near the hills in North Bengal, and also over considerable parts of South-East Bengal to falls of between 3 and 5 inches in parts of the Muzaffarpur and Darbhanga districts, but the greater part of the province has received between 10 and 15 inches. Compared with the normal fall for June, the actual falls have been decidedly below the normal over the eastern half of the province, and also in the greater part of the northern districts. In the majority of cases where defects are recorded they are small, usually up to 5 inches, but over a considerable area in North Bengal the defect varies from 5 to 10 inches, while at Buxa in the Darjeeling district the defect is no less than 16·16 inches. On the other hand the whole of Western Bengal, Chota Nagpur, Orissa, and the south of Bihar has received a rainfall above the normal, the excess amounts in some parts of Chota Nagpur ranging from 5 to 8 inches. Speaking generally of the rainfall of Bengal, it has varied from an average amount of about 16 inches in East Bengal and 14 inches in North Bengal, in both of which districts it has been in rather large defect, to about 10 inches in South-West Bengal and 9 inches in Bihar, in which district excess falls on the average have been registered.

The following table gives a condensed view of the rainfall of the various divisions of Bengal in June, and in each of the previous months of the present year, as compared with the normal values for the same period. The figures given represent the actual falls expressed as a percentage of the normal falls, and it will be seen that the rainfall has been below the normal for four out of six months of the year, and that for the six months the percentage varies from 82 and 83 per cent. in South-West and North Bengal to 107 in Chota Nagpur:—

Meteorological Divisions.	January.	February.	March.	April.	May.	June.	Actual rainfall of first six months of 1894 expressed as a percentage of the normal fall for the period.
South-West Bengal ...	0	55	42	97	58	104	82
North Bengal ...	0	64	16	177	83	77	83
East Bengal ...	0	57	164	79	70	95	88
Bihar ...	3	163	24	98	29	121	92
Orissa ...	30	19	27	128	20	137	92
Chota Nagpur ...	3	110	4	144	31	149	107

Taking the various meteorological divisions to have an equal value in the calculation, the actual rainfall of June 1894 has equalled 114 per cent. of the normal. It will be seen also that the principal excess falls occurred in Orissa and Chota Nagpur, while the principal defect has been in North Bengal.

The following table gives full data for the comparison of the actual and normal rainfall of the month of June for all the districts of the province. The figures are derived from the average and actual rainfall of rain-recording stations in each district, due allowance being made for the area which each represents :—

Percentage Table for June 1894.

Division.	District.	Normal district rainfall for June.	Actual district rainfall for June 1894.	Percentage of actual to normal rainfall.	Percentage excess (+), defect (—).

The mean pressure of the seven days	29·623
The average pressure of the corresponding period for 24 years, Surveyor-General's Office	29·548
	Hours.
The total number of hours of bright sunshine	40·0
The maximum possible number of hours of sunshine	93·8
	°
The mean temperature of the seven days	82·4
The average temperature of the corresponding period for 24 years, Surveyor-General's Office	83 9
The extreme variation of temperature	15·1
The maximum temperature	90·8
	Miles.
The highest velocity of the wind in one hour	20
	%
The mean relative humidity	86
The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office	85
	Inches.
The total fall of rain from 8th to 14th July 1894	1·67
The average fall of the corresponding period for 24 years, Surveyor-General's Office	2·50
The total fall from 1st January to 14th July 1894	21·49
The average fall of the corresponding period for 24 years, Surveyor-General's Office	27·03

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers; t, thunder; ≤, lightning; =, fog.

METEOROLOGICAL OFFICE, GOVT. OF INDIA; *Calcutta, the 16th July* 1894.

J. H. GILLILAND, *For Meteorological Reporter to the Govt. of India.*

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received the corresponding space is left blank. If any of the returns are wanting the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·10 inch of rain has fallen.

CALCUTTA, *the 17th July* 1894.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 14TH OF JULY 1894.

AT the close of the previous week weather was of ordinary monsoon character over Bengal, and fairly heavy rain was falling. On the 8th, or the first day of the present week, pressure was rising at the northern stations and falling over the southern half of the province, the fall increasing in amount towards the south-eastern districts, and being largest over the Bay. At the same time, wind directions at a few of the south-eastern stations began to show indraught towards the sea area. It was hence evident that a barometric depression was forming in the east of the Bay. Over Bengal rain had fallen rather abundantly from the 7th to the 8th, the rainfall being particularly heavy in the west of the province. On the 9th the depression over the Bay was developing slowly, and pressure had fallen in all districts, but owing to the indraught towards the depression, the monsoon winds were being drawn away from Bengal, and on the 9th the rainfall reported was light and local. On the 10th a further slow development of the depression in the Bay took place, and the small storm was probably nearly in the centre of the Bay and to the south-west of Akyab. Winds showed a strong indraught towards the small storm, and therefore again little rain was reported in Bengal on this day. It is probable also that on the 10th the small storm was beginning to move in a westerly direction, for on the morning of the 11th the centre had become much nearer to the South Orissa Coast, and was probably to the south-east of False Point. Hence on the 11th pressure was falling slowly to moderately in Orissa and in the south-western districts, while it had risen briskly over the remainder of the province. The centre of the small storm crossed the Orissa coast a little to the south of False Point shortly before 2 A.M. of the 12th, and at 8 A.M. of that day was some little distance to the south of Sambalpur. The storm was therefore moving rapidly in a westerly or west-north-westerly direction. It was not, however, a storm of much intensity, nor was the pressure at its centre very low, but it was accompanied by a most perfect cyclonic circulation of winds which particularly to the south of the storm, were decidedly strong. The storm having thus passed, inland, conditions became rather more favourable for rainfall in Bengal, and on the morning of the 12th the majority of stations reported rain. The storm, however, continued to advance in an almost westerly direction at an extremely rapid rate, the average speed being about 25 miles an hour for the 24 hours from 8 A.M. of the 12th to 8 A.M. of the 13th, and on the latter date it was in Central India. By the indraught towards the retreating storm, the monsoon current was to a great extent deflected from Bengal, and hence much less rain was received than is usually the case after the passage of a storm through Orissa. On the 13th, also, in the rear of the storm, pressure had risen very rapidly over the whole of the west of the province, the increase equalling nearly a quarter of an inch in Orissa. On the other hand pressure had begun to fall moderately to rapidly in Burma, and there was a slight tendency for winds to set up a circulation along the Burma coast, and conditions were therefore again favourable for the commencement of another barometric depression over the east of the Bay. On the 14th, or the last day of the week, pressure continued to fall rapidly at the eastern stations and in the east of the Bay, while a smaller fall was reported over the remainder of the province, though pressure was still in considerable excess generally. Winds at the eastern stations, however, showed very distinct indraught towards the Bay, indicating the continued existence and probable slight intensification of the depression over that area. With the formation of this second small storm, and by the indraught towards it, again the monsoon current blowing over Bengal began to fall off in force, and hence for the last two days of the week conditions were not very favourable for rainfall. It will be seen therefore for a considerable part of the week the monsoon current has been more or less deflected from Bengal, and hence the rainfall for the period has been decidedly smaller than usual.

Pressure.—The mean pressure for the week has been unusually high, and has been in excess by about a tenth of an inch. Indeed at several of the stations in Bihar, etc., the excess has averaged 0·11″. Owing to the passage of the small storm through Orissa, the excess over this area has been comparatively small, and at Cuttack it has only equalled 0·03″. In Assam the average pressure has been 0·074″ above the normal.

Temperature.—The general mean temperature of Bengal for the week has been below the normal by half a degree, but the defect has been mainly confined to South-West Bengal and Chota Nagpur. Indeed in North and East Bengal slight excess temperatures have been registered. In Assam the average mean temperature has been nearly normal.

Rainfall.—The general falls in Orissa and Chota Nagpur have equalled about three inches, and those in Bihar, East Bengal and South-West Bengal about two inches. The smallest falls have occurred in North Bengal, where they have averaged less than an inch and a half. The falls in Orissa and Chota Nagpur have been slightly in excess and in Bihar slightly in defect. On the other hand the defect has been large in South-West Bengal and very large in East and North Bengal. Expressed as percentages of the normal rainfall, the actual falls during the week have equalled the following amounts:—South-West Bengal 77 per cent., North Bengal 49 per cent., East Bengal 66 per cent., Bihar 90 per cent., Orissa 137 per cent., and Chota Nagpur 102 per cent.

Taking each Division to have an equal value in the calculation, the rainfall of Bengal for the week has equalled only 87 per cent. of the normal.

In Assam the rainfall has also been very small during the week. Silchar has received 0·78 inch, Sibsagar 0·70 inch and Dhubri 0·54 inch.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 14th of July 1894:—

Meteorological Divisions.	Temperature.						Rainfall.									
			Averages for week.				Of week.			Rainy days.			Since 1st of month.		Since 16th May 1894.

AFRICA, NORTH-EAST COAST—RED SEA.

Perim harbour—Amended depth on Myrmidon shoal.

NOTICE to Mariners (No. 274 of 1894), issued by the British Admiralty, is re-published:—

The following information, relating to Myrmidon shoal, is the result of a recent examination by Commander A. Mostyn Field, R.N., H.M. Surveying Vessel *Egeria*:—

The blasting and dredging operations of the Perim Coal Company appear to have removed the central part of the shoal.

On the north-west portion of the shoal there is now a least depth of 25 feet at low water, and on the south-east portion a least depth of 24 feet at low water, bottom sand.

From the north-west extreme of the shoal, taking 5 fathoms as the limit, Pirie point light-house bears south, distant $2\frac{2}{10}$ cables; and Chevalier point, E. $\frac{1}{8}$ N. (N. 88° E.); and from the south-east extreme Pirie point light-house bears S. by W. $\frac{1}{2}$ W. (S. 16° W.), distant $1\frac{6}{10}$ cables; and Coal stacks pier extremity, W. by N. $\frac{1}{2}$ N. (N. 73° W.)

Approximate position, south-east extreme shoal, lat. 12° 38′ 25″ N., long. 43° 24′ 50″ E.

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received the corresponding space is left blank. If any of the returns are wanting the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least ·10 inch of rain has fallen.

CALCUTTA, *the 24th July* 1894.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 21ST OF JULY 1894.

AT the close of the previous week a small storm was forming in the north of the Bay, and by the indraught towards it the monsoon current which had been flowing over Bengal began to fall off in force, and hence rainfall was becoming much lighter than it had been. On the 15th, or the first day of the week under review, pressure had fallen over the whole province, the fall being largest in the north of the Bay and at the eastern stations. Winds also showed a very decided cyclonic circulation, which extended over the whole of the north of the Bay and the greater part of Bengal. The centre of this circulation was probably to the west of the centre of the Bay in the latitude of Puri. On the 16th pressure was falling rapidly in Orissa, particularly at False Point, which reported a fall exceeding a tenth of an inch, while it was falling slowly in the west of the province and rising at the eastern stations. The small storm had apparently advanced in a north-north-westerly direction, and was at 8 A.M. of the 16th some little distance to the south-east of False Point, while it was also probably intensifying to a considerable extent. On the 17th the storm had advanced again in a north-north-westerly direction, and was within the north-west angle of the Bay, the centre being a short distance only to the south-east of Balasore. The storm had increased rapidly in intensity, and there had been a fall of pressure at Balasore of more than a fifth of an inch, while a decidedly rapid fall had occurred over the whole of the south-western districts of Bengal. A very strong cyclonic circulation of winds accompanied the storm, and it extended over the whole of Bengal and the northern half of the Bay. The centre of the small cyclonic storm then crossed the coast to the south of Balasore soon after noon of the 17th, and the exceedingly low pressure of 29·169 inches was recorded at that station at 1 P.M. This pressure is about a third of an inch below the normal of the day. Probably also, as the centre did not actually touch Balasore, at the actual centre of the storm a pressure of only about 29 inches existed. The pressure recorded at Balasore even is an unusually low pressure for a cyclonic storm of the rains. The storm gave very strong winds and stormy and very squally weather over a large part of the Bay, and particularly in the north-west angle, and from Balasore it is reported that during the early part of the storm the flag-staff with the storm signals hoisted on it was blown down, and hence the signals could no longer be hoisted there.

Either immediately before crossing the coast, or as the storm advanced inland it began to change its line of advance, and instead of moving in a north-north-westerly direction it advanced almost due west. Hence at 8 A.M. on the 18th the centre of the storm was a little to the south-east of Sambalpur in the Central Provinces, having thus advanced about 200 miles since the previous day in almost a due westerly direction. On the 19th the centre of the storm was to the south-east of Seoni, or about 240 miles to the west of its position on the 18th, while on the 20th the centre was near Pachmarhi, and on this day it had advanced in a west by north direction through about 120 miles. On the 21st, or the last day of the week under review, the centre of the storm was a little to the north-west of Indore, and had thus advanced about 200 miles in a west-north-westerly direction. Throughout its passage across the Peninsula it gave rather strong winds, and as it approached the western side of the Peninsula it created a strong indraught of monsoon winds from the Arabian Sea towards it. It hence has caused very heavy weather in the western districts of India, and probably also in the Arabian Sea.

The storm therefore has been a very important one, as it gave heavy weather from about the 14th or 15th up till certainly the 21st, in both the Bay of Bengal and Arabian Sea and over the head of the Peninsula as well. During the passage of the storm inland through the north of Orissa, in addition to the stormy weather with very strong winds and the very low pressures which were recorded, some very heavy falls of rain were reported. Thus from 8 A.M. of the 16th to the 18th Chandbali received 12·3 inches of rain, and Bhadrak also in the Balasore district 7·7 inches. A heavy wave of monsoon winds advanced in the rear of the storm, but owing to the westerly direction taken by it, the monsoon current was mainly deflected towards the Central Provinces, and therefore away from Bengal. Hence the monsoon current affecting Bengal during the week has again been rather feeble, except in the south-western districts and Orissa, which were more or less affected by the storm. The rainfall for the week has therefore been in very large defect in North and East Bengal and Bihar; the defect has been much smaller in South-West Bengal and Chota Nagpur, while on the other hand the fall in Orissa has been nearly twice as large as usual.

Pressure.—The distribution of pressure during the week has been to a great extent governed by the storm, and while the mean pressure recorded in Orissa and at the neighbouring stations in Bengal shows a decided defect, over the remainder of the province decided excess pressures have been registered. Hence Cuttack and False Point show defects of between 0·05″ and 0·06″, while on the other hand excess pressures of 0·03″ to 0·05″ have been recorded in Bihar and North Bengal.

Temperature.—Owing to the rather scanty rainfall, the mean average temperature in North and East Bengal and Bihar has been nearly a degree higher than the normal, while on the other hand very slight defects have been registered over the remainder of Bengal. For

the whole Province, however, the variation has been only an excess of about a fifth of a degree In Assam the small excess of 0·3° has been recorded.

Rainfall.—An average fall of nearly five inches has been registered in Orissa or nearly two inches in excess of the normal. In South-West Bengal, East Bengal and Chota Nagpur the falls have averaged between one and two inches only, or falls much smaller than usual, while in North Bengal and Bihar the amounts recorded have only averaged between half an inch and an inch. These amounts are about two inches in defect of the normal in North and East Bengal, about an inch and a half in defect in Bihar, and nearly an inch less than the normal in South-West Bengal and Chota Nagpur.

Expressed as percentages of the normal rainfall the actual falls during the week have equalled the following amounts:—South-West Bengal 66 per cent., North Bengal 24 per cent., East Bengal 46 per cent., Bihar 32 per cent., Orissa 163 per cent., and Chota Nagpur 63 per cent. Taking each division to have an equal value in the calculation, the rainfall of Bengal for the week has equalled only 66 per cent. of the normal fall.

In Assam the rainfall has also been generally light during the week; Cachar has received 4·77 inches, Sibsagar 1·18 inches, and Dhubri only 0·49 inch.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 21st of July 1894:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1894.

The average fall of the corresponding period for 24 years, Surveyor-General's Office		2·53
The total fall from 1st January to 21st July 1894		26·44
The average fall of the corresponding period for 24 years, Surveyor-General's Office		29·61

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h., 10h., 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the New Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers; t, thunder; lr, lightning reflection.

RESOLUTION ON THE ANNUAL RETURNS SHEWING THE WORKING OF THE CHARITABLE DISPENSARIES IN BENGAL DURING THE YEAR 1893.

MUNICIPAL DEPARTMENT,—MEDICAL.

Calcutta, the 28th July, 1894.

RESOLUTION—No. 3053Med.

READ—

The Annual Returns on the working of the Charitable Dispensaries in Bengal for the year 1893.

Read again—

The Triennial Report on the working of the Charitable Dispensaries in Bengal for the three years 1890—92, and the Resolution recorded on it by Government.

The detailed Report on the administration of the Charitable Dispensaries in Bengal, which is prepared by the Inspector-General of Civil Hospitals once in three years, was submitted last year, and he has therefore on this occasion merely forwarded with brief notes the usual annual returns showing the working of those institutions during 1893. An important question connected with the medical administration of the Province engaged the attention of Government during the year, viz., the propriety and the possibility of improving the pay and prospects of the Civil Hospital Assistant class, so as to attract better men into the service, and thus enable Government to insist on higher qualifications in candidates for employment as Civil Hospital Assistants. The whole question was referred to the consideration of a Committee, who were appointed in the month of December: their report had not been received when the year closed. Earlier in

the year, however, as a first step towards the improvement of their position, the Lieutenant-Governor, on the recommendation of the Inspector-General of Civil Hospitals, allowed supernumerary Civil Hospital Assistants when unemployed to draw their full grade pay of Rs. 20 or Rs. 25 instead of a reduced salary of Rs. 10, as was formerly the case.

2. *Number of dispensaries.*—The number of dispensaries open at the close of the year 1893, from which statistics were received for incorporation in the Provincial Returns, was 339, against 299 in the previous year. Of this increase of 40 in the number of dispensaries, 24 were new institutions opened during the year, the remainder being dispensaries of older standing, such as those maintained by the Irrigation Department and the Court of Wards, and also the Dufferin Hospitals for women, the statistics of which have now for the first time been included in the annual returns.

3. Two Local Fund dispensaries were sanctioned at Samastipur and Sherghati, but not opened. Orders also were passed for bringing three more private dispensaries on the Government list, but two of these were not opened during the year, and no returns were received from the third. Besides these, there are 13 dispensaries already in existence, maintained or aided by the Court of Wards and the Lady Dufferin Fund, the statistics of which have not been included in the present returns, though they will be included in future. The Lieutenant-Governor commends the action of Dr. Harvey in arranging for the inclusion of these institutions, without which the returns did not show the true measure of charitable medical relief afforded in Bengal. Since the close of the year instructions have been issued to the Board of Revenue to require the managers of all dispensaries in Wards' estates to bring them under Government supervision and to make them conform to the rules of the Dispensary Manual. Similarly, it was decided, in communication with the Committee of the Countess of Dufferin Fund, that all their dispensaries and hospitals in these Provinces should be brought under the same supervision.

4. *Number of patients treated.*—The total number of patients treated during the year was 1,926,528, against 1,613,771 of the previous year, showing an increase of 312,757. Excluding the number of patients (62,129) treated in those hospitals which have now for the first time been included in the Provincial Returns, the real increase was 250,628, against an increase of 117,717 in 1892 over the figures for 1891. The Lieutenant-Governor is glad to notice this steady advance in the figures of attendance, since it affords the best testimony to the good management and popularity of the charitable dispensaries in the mufassal. The daily average attendance of patients rose from 12,320 in 1892 to 15,426 in 1893. In 14 dispensaries the increase in the number of patients was over 3,000 in each case, the most marked among them being Laheria Serai (Darbhanga) and Gopalganj (Faridpur), where the increase respectively was 14,506 and 7,149; on the other hand, there was a decrease of 2,000 and upwards in six cases, the largest being in Madhubani, where the number fell off by 7,849. The increase is generally attributed either to the growing popularity of the institution, or to the greater unhealthiness of the year, or to both causes; but these explanations are not always either convincing or consistent. For instance, an increase of nearly 7,000 in the Darbhanga Dispensary has been ascribed to the "excessive prevalence of malarial fevers," whilst the falling off of 7,849 at Madhubani in the same district is said to be due to the "healthiness of the year." The falling off of 2,102 patients at Chanchal in the Malda district is reported to have been occasioned by the temporary "absence of the permanent incumbent (medical subordinate in charge) on privilege leave," a reason which, in the opinion of the Lieutenant-Governor, is most insufficient.

5. *In-door patients*—One hundred and sixty-three dispensaries received both in-door and out-door patients, as against 148 in the previous year, the total number of in-patients treated being 40,589, against 37,845 in 1892, thus showing an increase of 2,744 persons. The total number of beds available rose from 2,357 in 1892 to 2,511, but the daily average of attendance was 1,693 only, which shows that full advantage is not yet taken of the accommodation provided for in-patients at hospitals. The attention of the managing bodies of these charitable institutions is again drawn to the remarks in the Resolution of last year pointing out the advisability of providing suitable accommodation

(1) for the relatives of patients near the dispensaries, and (2) for moribund cases and pauper patients. It is gratifying to notice that with a larger number of in-patients treated during the year, viz. 40,589, against 37,845 of the previous year, the number of deaths in hospitals fell off from 5,107 to 5,059, the death-rate of inmates being thus reduced from 13·49 to 12·46 per cent. The percentage of mortality was as usual largest in the hospitals along the pilgrim route to Puri, the proportion rising in one case as high as 49 per cent. of the patients treated. Evidently a large proportion of the sufferers were in a moribund condition when received into the hospital.

6. *Out-door patients.*—The table in the margin shows that, with the exception of a single year (1885), the number of out-door patients has gone on increasing every year during the last decade, the number having almost doubled during that period. It is satisfactory to notice that twenty-two dispensaries had an average daily attendance of 100 and upwards in 1893 as against sixteen which reached this standard in the previous year. The largest average daily attendance (267) was at the Municipal dispensary at Chapra.

Year.	Number of patients treated.	Increase over previous year.
1	2	3
1884	965,555	.....
1885	960,218	—5,337
1886	1,006,457	46,239
1887	1,055,465	49,008
1888	1,106,700	51,235
1889	1,179,843	73,143
1890	1,239,850	60,007
1891	1,460,195	220,345
1892	1,575,926	115,731
1893	1,885,939	310,013

7. *Diseases treated.*—As usual, "malarial fevers" contributed the largest number of cases treated at the dispensaries, forming no less than 21·1 per cent. of the total number of cases treated both in-door and out-door, against a percentage of 19·2 in the previous year. The number of fever cases rose from 320,113 in 1892 to 408,043 during 1893, and even allowing for the figures returned from the new dispensaries, it is clear that there was a very large increase in the number of fever patients, and that in the year 1893 fever was very common. Cases of bowel-complaints (dysentery and diarrhœa) rose from 71,781 to 87,243. The Inspector-General of Civil Hospitals attributes the unusual prevalence of these diseases to the prolonged and heavy rains of the year, and though the Sanitary Commissioner's vital statistics show that the fever mortality was not high, the ratio being only 20·78 per thousand as against 22·84 in 1892, it is clear that a larger proportion of fever patients came to the dispensaries for relief. The number of cases of cholera and small-pox fell off from 9,795 and 191 in 1892 to 8,077 and 91 respectively; and although it is well known that such cases are only in rare instances brought to a hospital, it may be inferred from a comparison of the figures for the two years that these diseases were on the whole less prevalent during the year 1893 than during 1892. The statistics in the Sanitary Commissioner's Report fully corroborate this inference. The number of lepers who attended at the hospitals was 3,286, against 2,769 in 1892, the largest number being treated at the Darbhanga and Laheria Serai dispensaries, viz., 209 and 138 respectively.

8. *Surgical operations.*—The Lieutenant-Governor observes with satisfaction that the total number of surgical operations, both major and minor, increased from 86,915 in 1892 to 92,476 during the year under review, for it is on the success of these operations that the fame and popularity of charitable dispensaries largely depends. The largest numbers of major operations were performed in the hospitals named in the margin, whilst in twelve hospitals more than a thousand operations of both kinds were performed, Dacca and Monghyr heading the list with 3,380 and 3,360 operations respectively. The officers who performed 150 or more major operations were the following:—

Dacca	632
Gaya	607
Chapra	482
Bankipore	480
Monghyr	465
Arrah	288
Burdwan	237
Cuttack ...	234
Muzaffarpur	231

Assistant Surgeon Apurba Krishna Das (Chapra) ...	326
Surgeon-Major R. H. Whitwell (Gaya)	266
Assistant Surgeon Ram Kali Gupta (Bankipore) ...	255
Apothecary J. Burnett (Dacca)	243
Assistant Surgeon Lalit Mohan Laha (Monghyr) ...	227
Assistant Surgeon Nritto Gopal Mitter (Arrah) ...	207
Surgeon-Lieutenant-Colonel G. Price (Burdwan) ...	190
Assistant Surgeon Sheik Mohomed Hosain (Barh) ...	184

The number of operations for cataract (extraction of the lens) fell off from 2,333 in 1892 to 2,221 during 1893. The officers named in the margin were responsible for the largest number of these operations, whilst ten other officers carried out fifty operations and upwards. The number of lithotomies performed during the year as compared with the previous year fell from 191 to 143. Surgeon-Major Whitwell (Gaya) operated in the largest number of cases, viz. 21. Eight ovariotomies were performed, and in five cases death occurred: this result is explained by the fact that only the very worst cases submit to operation. The Inspector-General of Civil Hospitals is requested in future, when mentioning the names of officers who are conspicuous for activity in surgery, to state the names of the hospitals to which they were attached.

Surgeon-Major R. H. Whitwell (Gaya)	170
Assistant Surgeon Apurba Krishna Das (Chapra) ...	146
Assistant Surgeon Nritto Gopal Mitter (Arrah) ...	113
Surgeon-Lieut.-Col. G. Price (Burdwan)	107
Assistant Surgeon Ram Kali Gupta (Bankipore)...	102

9. *Sex of patients.*—The total number of females treated during the year, both as in-door and out-door patients. was 299,187, against 249,410, showing an increase of 49,777, or 19 per cent. Although this represents but an infinitesimal fraction of the female population of these provinces, the advance is satisfactory, and it is expected that, with the gradual increase in suitable accommodation provided by the construction of Dufferin Hospitals throughout the province, the number of female applicants for medical help will increase, though the progress is necessarily slow. The average daily attendance of female in-patients was no more than 346, although 718 beds were available for them.

10. *Income and expenditure.*—The total income of the dispensaries during 1893, inclusive of the opening balance of Rs. 25,289, was Rs. 6,14,737, against Rs. 5,48,699 of the previous year, which included a larger opening balance of Rs. 35,327. The net increase in the income was Rs. 76,076, due to a large extent to the inclusion of the statistics of a number of dispensaries for the first time this year. The increase was contributed largely by Government (Rs. 13,457), by Local as distinguished from Municipal Funds (Rs. 25,162), and by subscriptions from natives of India (Rs. 35,232). The latter appear chiefly under institutions which had not been included in the returns in previous years.

11. The total expenditure of the year was Rs. 5,86,365 against Rs. 5,23,544, showing an increase of Rs. 62,821. This increase was due mainly to the newly-included dispensaries, but there was also some additional expenditure on salaries of medical officers and subordinate establishment, bazar and European medicines, diet, and miscellaneous charges. Whilst reviewing this subject, it may be noticed that future returns are expected to show a perceptible saving of expenditure on European medicines under the scheme lately sanctioned by the Lieutenant-Governor, which contemplates the supply from England at wholesale prices of such drugs, instruments, and medical necessaries as cannot be better obtained in India, and the supply of tinctures and other alcoholic preparations from a leading Calcutta house at a greatly reduced cost. Government have with this object made the important concession of allowing the firm to obtain duty-free the amount of country spirit required for those preparations. Although the expenditure on diet on the whole shows an increase, as noticed above, the annual cost of maintenance of each patient was Rs. 39-7-2 in 1893 as against Rs. 40-6-5 of the previous year. The Lieutenant-Governor would expect to see the cost of diet of in-patients at dispensaries increase rather than decrease, as was the case in 1893. Towards the total expenditure of Rs. 5,63,737 (excluding the amount invested during the year), Government contributed in cash Rs 41,434 or 7·35 per cent. But besides this, in the majority of instances Government supplied the medical officers, who are the mainstay and support of the dispensaries all over the province. No part of the salaries of Civil Surgeons is debited to the dispensaries situated at district head-quarters, which are daily visited by them; and at subdivisional head-quarters Government pays the salary of the Assistant Surgeon or Civil Hospital Assistant for doing his regular work, whilst the local dispensary has only to pay Rs. 20 or Rs 10 a month, respectively, for the services of these highly-trained medical subordinates; thus the ostensible contribution of 7·35 per cent. of the expenditure represents only a small portion of the pecuniary assistance actually rendered by Government.

12. *Inspections.*—One hundred and fifty-four dispensaries were inspected by Civil Surgeons four times (the minimum fixed by the Dispensary Manual) or upwards during the year, as against 119 in the previous year. Although the figures show improvement, the results are still far from satisfactory, and the Lieutenant-Governor thoroughly supports the serious injunction of the Inspector-General of Civil Hospitals to all medical officers that inspection is one of the most important of their duties, and His Honour expects them to discharge it as fully as possible. Sir Charles Elliott is glad to find that Dr. Harvey personally inspected 28 dispensaries at district head-quarters, 6 at subdivisions, and 14 outlying dispensaries between the date of his taking over charge of the Medical Department on the 8th November 1893 and the middle of May 1894. For this energy and industry, as well as for the ability with which he has administered the Department since he took charge, the Lieutenant-Governor's thanks are due to him. His Honour also desires to acknowledge his obligations to Surgeon-Colonel J. G. Pilcher and Surgeon-Lieutenant-Colonel J. H. Newman, both of whom officiated as Inspector-General at different times during the year 1893.

By order of the Lieutenant-Governor of Bengal,

J. A. BOURDILLON,

Offg. Secretary to the Government of Bengal.

LIBERALITY OF KUMAR NARENDRA LAL KHAN OF MIDNAPORE.

No. 3005L.S.-G., dated Calcutta, the 26th July 1894.

From—J. H. TEMPLE, Esq., Offg. Under-Secretary to the Government of Bengal, Municipal Department,

To—The Commissioner of the Burdwan Division.

I AM directed to acknowledge the receipt of the correspondence ending with your letter No. 659M., dated the 7th July 1894, in which you report that the proposal to devote the donation of Rs. 30,000 made by Kumar Narendra Lal Khan of Midnapore to perpetuate the memory of his father to the endowment of a zenana hospital at that place has been abandoned, and that it has been decided to spend that amount in the construction of a bridge over the Jhalka nalla.

2. In reply, I am directed to say that the Lieutenant-Governor is pleased to accept the liberal offer made by the donor, and, in supersession of Government order No. 2484Med., dated the 28th July 1893, I am to request that you will be so good as to convey to him an expression of His Honour's acknowledgment of his liberality. This letter will be published in the *Calcutta Gazette.*

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 28th July, 1894.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
	BENGAL.		
	Burdwan Divn.		
1	Burdwan July 28, '94	3·64	Weather—seasonable. Prospects of *aus*, jute, and sugarcane fair. Transplantation of *aman* continues. More rain needed in parts. Fodder and water sufficient. Prices of common rice :—

* Mean for 4 days. | † Mean of 6 days. | ‡ Mean of 5 days.

Explanation.—Summary—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the *humidity* of the atmosphere is expressed at percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The mean are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional stations for the stations in the district reading in returns divided by the number of stations.

the week ending Saturday, the 28th of July 1894.

Normal mean.	Mean 8 A.M. temperature.	Average humidity at 8 A.M.	Average cloud amount at 8 A.M.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS.									District.
					Of week.				Rainfall.					
									Since 1st of month.			Since 16th May 1894.		
					Mean for district.	Normal mean.	Average number of rainy days.	Normal number of rainy days.	Mean for district.	Normal mean.	Variation.	Mean for district.	Normal mean.	Variation.

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received the corresponding space is left blank. If any of the returns are wanting the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·10 inch of rain has fallen.

CALCUTTA, *the* 31*st July* 1894.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 28TH OF JULY 1894.

DURING the previous week a cyclonic storm had advanced from the north-west angle of the Bay across the coast a little to the south of Balasore, and had travelled in an almost westerly direction across India. It had given extremely heavy weather and excessive rainfall to many of the districts it had passed through, particularly in the western districts of India, and on the 21st, or the last day of that week, its centre was a little to the north-west of Indore. On the 22nd the storm had advanced in a north-westerly direction and its centre was near Mount Abu. On the 23rd it had advanced into Lower Sind, and on the 23rd though a depression was still indicated over that area it was very feeble, and on the 24th the depression had entirely disappeared. Thus the storm which first formed a little to the west of the centre of the Bay about the 14th instant continued to exist quite up to the 23rd or for ten days, during which period it also advanced in directions varying in different parts of its course from north-north-westerly to westerly over a path probably seventeen or eighteen hundred miles long, giving heavy weather and abundant rain practically throughout its existence. It has therefore been a storm of exceptional nature.

At the beginning of the week under review while this first storm was still in existence conditions were again becoming disturbed in the Bay. On the 22nd, or the first day of the week, pressure was falling at all except a few of the south-western stations, the fall being largest in the north-east angle of the Bay. It is probable that even on this day a small storm was forming, and the weather at Akyab on the 22nd was extremely suspicious with a falling barometer during the day, while to the south very strong winds and very squally weather were reported from Diamond Island. On the 23rd the observations indicated that a feeble storm existed partly over the head of the Bay and partly over the Sunderbans with a centre to the south of Barisal, where pressure was 0·13 inch in defect. It is uncertain whether this storm was the continuation of the disturbance indicated in the north-east angle of the Bay on the 22nd, but if it is, the disturbance must have moved in a north-westerly direction during the 24 hours from the 22nd to the 23rd. During the 23rd the storm commenced to move in a westerly direction, and up to 4 P.M. of that date it had not intensified to any extent, but remained a feeble disturbance. From that time, however, it commenced to deepen and intensify rapidly, and at 8 A.M. of the 24th it was a deep and rather severe storm, the centre being about 30 to 40 miles to the south-east of Calcutta, where a pressure of only 29·203″ was recorded or 0·318″ below the normal. With the rapid deepening of the storm the cyclonic circulation of winds became much stronger and extended over the whole of Bengal. The main force of the winds was to the south and south-east of the storm, and a severe gale of wind blew at Saugor Island and the Sandheads, commencing from about midnight on the 23rd, and for several hours the wind velocity at Saugor Island averaged more than 60 miles an hour. At noon of the 24th the centre of the storm was about 25 or 30 miles to the south-south-west of Calcutta, the centre having passed apparently close to Diamond Harbour, and at this time the direction of its movement must have been a little to the north of west. Its rate of advance then became very slow for some hours, and up to 10 P.M. the storm had made little further advance, and its centre was still to the south-west of Calcutta and south-east of Midnapore. This retardation appears to have been due to an alteration in the direction of its movement which was taking place, for it is always the case that storms move very slowly while recurving. After 10 P.M. it moved almost in a north-westerly direction, and at 8 A.M. on the 25th the centre was to the south of Bankura and nearer to that station than to Midnapore. The pressure at Bankura on the 25th at 8 A.M. was 29·274″ or 0·211″ in defect, and it is probable the storm was already commencing to fill up slightly, though it was still accompanied by strong cyclonic winds. On the 26th at 8 A.M., the storm was entering Baghelkhand, and had hence moved across Chota Nagpur during the 24 hours at an average rate of about 12 miles an hour in a west-north-westerly direction. The depression at the centre of the storm was much smaller than on the previous day, and probably did not exceed a tenth of an inch, but it was still accompanied by a fairly strong cyclonic circulation of winds. On the 27th the storm had marched nearly westwards and the centre was near Sutna, and the storm was still a shallow depression only, while on the 28th, or the last day of the week, it had almost completely filled up.

During the passage of the storm in addition to the very low pressures recorded and the very strong cyclonic circulation of winds, which gave very stormy weather with rough sea at the head of the Bay, and rather squally or somewhat stormy weather over a large part of Bengal, the storm also gave heavy rainfall over the south-western part of the province, the falls being exceedingly heavy near the path of the centre. Thus on the morning of the 24th Contai in the Midnapore district reported 15·29 inches of rain, Dantoon also in the Midnapore district 10·31 inches, Diamond Harbour 9·90 inches, and Tamluk, Ghatal and Saugor Island each more than 7 inches. On the 25th Mohanea, Shahabad district, reported 6·65 inches, and Aurangabad, Kendrapara, Jajpur, Akhyapada, Chandbali, Bhadrack and Balasore from four to six inches, and so on.

Pressure.—The variation of pressure during the week has been dependent on the formation and movement of the storm just described. The mean pressure for the week varies from an excess pressure of 0·01 inch to 0·02 inch at the extreme northern stations to a defect of nearly 0·08 inch at Calcutta and defects of about 0·05 inch and 0·06 inch at Saugor Island, Jessore, Midnapore, Cuttack, &c.

Temperature.—The mean average temperature for the week has been in defect by from about 1° to 2° in South-West Bengal, Orissa and Chota Nagpur, while it has been nearly normal or slightly in excess in the other districts. For the whole of the province the mean variation has been a defect of two-thirds of a degree: on the other hand in Assam there has been an excess of 1·5°.

Rainfall.—The average rainfall in Orissa has equalled nearly 6 inches, while in Chota Nagpur it has averaged about 5 inches and in South-West Bengal nearly 4 inches. In East Bengal an average fall of 2·81 inches is recorded, and in Bihar 1·80 inches. Exceedingly small falls only have been reported from North Bengal, which has averaged the small amount of 0·50 inch. The falls have been very abundant and above the normal in Orissa, Chota Nagpur and South-West Bengal, while large defects are reported in Bihar and East Bengal and exceedingly large defects in North Bengal, some parts of which indeed have received little or no rain.

Expressed as percentages of the normal rainfall, the actual falls during the week have equalled the following amounts:—South-West Bengal 128 per cent., North Bengal 18 per cent., East Bengal 76 per cent., Bihar 64 per cent., Orissa 183 per cent., and Chota Nagpur 148 per cent. Taking each division to have an equal value in the calculation, the rainfall of Bengal for the week has equalled 103 per cent. of the normal fall.

In Assam the rainfall has also been generally light during the week; Cachar has received 1·23 inches, Sibsagar 0·69 inch, and Dhubri only 0·46 inch.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 28th of July 1894:—

Meteorological Divisions.	Temperature.					Rainfall.								
	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1894.
		Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

	Inches.
The mean pressure of the seven days	29·457
The average pressure of the corresponding period for 24 years, Surveyor-General's Office	29·527
	Hours.
The total number of hours of bright sunshine	20·5
The maximum possible number of hours of sunshine	92·6
	°
The mean temperature of the seven days	81·7
The average temperature of the corresponding period for 24 years, Surveyor-General's Office	83·1
The extreme variation of temperature	13·5
The maximum temperature	89·5
	Miles.
The highest velocity of the wind in one hour	23
	%
The mean relative humidity	87
The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office	87
	Inches.
The total fall of rain from 22nd to 28th July 1894	3·23
The average fall of the corresponding period for 24 years, Surveyor-General's Office	3·45
The total fall from 1st January to 28th July 1894	29·67
The average fall of the corresponding period for 24 years, Surveyor-General's Office	33·06

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h., 10h., 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers; lr, lightning reflection.

METEOROLOGICAL OFFICE, GOVT. OF INDIA; J. H. GILLILAND,

Calcutta, the 30th July 1894. *For Meteorological Reporter to the Govt. of India.*

Offg. Secy. to the Govt. of Bengal.

WORKING OF THE FIRE-BRIGADE IN THE TOWN AND SUBURBS OF CALCUTTA AND IN THE MUNICIPALITY OF HOWRAH DURING THE YEAR 1893-94.

No. 7021, dated Calcutta, the 20th July 1894.

From—SIR JOHN LAMBERT, K.C.I.E., Commissioner of Police, Calcutta,

To—The Secretary to the Government of Bengal, Municipal Department.

I HAVE the honour to submit, for the information of Government, a report on the working of the Fire-Brigade in the town and suburbs of Calcutta and in the Municipality of Howrah for the year 1893-94.

2. During the year 35 fires occurred, at 28 of which the Brigade was in attendance; of the remaining seven fires, one was extinguished by the local police and six by the residents of the locality.

3. The estimated value of property destroyed during the year was Rs. 7,81,755.

4. There were four fires in buildings licensed under Acts IV of 1883 and I of 1893, in which property to the value of Rs. 2,90,665 was destroyed.

5. The five most serious fires that occurred during the year may be briefly noticed as follows:—

I.—On the 11th April, at 12-10 A.M., a fire broke out on board the steam flat *Gwalior* and the flats *Sherpur* and *Talup* which were moored off Juggernath Ghat. It was extinguished by the Fire-Brigade and Port Commissioners' floating fire-engine by 6 P.M. The loss of cargo consisting of bales of jute was valued at Rs. 70,000, and the damage done to the vessels was estimated at Rs 30,000, in all Rs. 1,00,000.

II.—On the 7th December at 12-40 A.M., a fire was reported on board the flat *Khyber*, which was lying off Cossipur Ghat, causing damage to the extent of Rs. 1,16,194 to the cargo which consisted of jute, gunny bags and salt. This fire was not extinguished until 6 P.M. on the following day.

III.—On the 1st January 1894, at 3-30 A.M., a fire, which lasted till noon, occurred on board the flat *Serajganj* lying off Ruthtolla Ghat, by which jute to the value of Rs. 85,772 was destroyed.

At these three river fires, it was found necessary to form bridges of boats between the shore and the burning vessels, to enable the Fire-Brigade to get the hose on board.

IV.—On the 1st of April 1893 a fire occurred in a brick godown belonging to the Strand Bank Press at Chitpur, in which a large quantity of jute was stored; the loss was estimated at Rs. 1,25,000.

V.—On the 16th February 1894, at 11-45 A.M., a fire broke out at the Howrah Jute Mills, by which damage to the extent of Rs. 1,26,565 was caused. This fire lasted over three days, and 18,600 maunds of jute were damaged by fire and water.

6. During the year there were two prosecutions under the Explosives Act IV of 1884, in which one conviction was obtained.

7. A memorandum of the fires which occurred and a statement showing receipts and expenditure on behalf of the Brigade are enclosed.

Memorandum of fires in Town and Suburbs of Calcutta and in Howrah from 1st April 1893 to 31st March 1894.

CALCUTTA POLICE OFFICE,
The 20th July 1894.

J. LAMBERT,
Commissioner of Police.

REPORT ON THE WORKING OF THE LICENSED WAREHOUSE AND FIREBRIGADE ACT I OF 1893 IN CALCUTTA DURING THE YEAR 1893-94.

No. 16J., dated Calcutta, the 12th July 1894.

From—J. G. RITCHIE, Esq., Officiating Chairman of the Corporation of Calcutta,
To—The Secretary to the Government of Bengal, Municipal Department.

I HAVE the honour to submit the following report, under section 41 of Act I of 1893 (B.C.), of the Warehouses in Calcutta for the year ended 31st March 1894.

2. During the first quarter of the year under review the levying of license fees was suspended under orders of the Government of Bengal contained in their letter No. 192T.M., dated the 1st June 1893, pending the publication of the Licensed Warehouse and Fire-Brigade Act of 1893, which had passed the Bengal Council on the 1st of April 1893, in the *Calcutta Gazette*, with the assent of His Excellency the Viceroy and Governor-General of India. The said Act was published in the *Calcutta Gazette* of the 29th June 1893, and under orders of the Government of Bengal, No. 299T.M., dated the 26th June 1893, license fees were levied for the first quarter of the year under the old Act (IV of 1883), and notices issued to owners or occupiers of new warehouses under section 6 of Act I of 1893 (B.C.)

3. It was, however, found that there were several technical objections to the levying of fees under the Act, and on representations being made to Government, a short amending Act was passed in the Bengal Legislative Council, towards the close of the year under report, by which the Commissioners were authorised to levy fees on old warehouses for the last three quarters of 1893-94, according to the provisions of the old Act of 1883, and to levy fees on depôts of straw, hay, wood, &c., for these quarters under section 346 of Act II of 1888, which had been repealed by Act I of 1893. The operation of Bengal Act I of 1893 was thus practically postponed to the 1st of April 1894.

4. On the 18th of July 1893, the Commissioners received intimation from the Commissioner of Police of the appointment of Mr. G. E. Marklew as an Inspector of Warehouses under section 8, clause 1 of Act I of 1893.

5. Under the old Act the Commissioners received 20 per cent. of the collections towards the cost of inspection, collection and assessment of warehouses. This arrangement having been altered by Act I of 1893, a representation was made to the Government of Bengal on the subject. The Bengal Government, in their letter No. 3987M., dated 16th December 1893, directed the Commissioner of Police to make a provision for the cost of assessment and collection for warehouses in his Budget, and the latter made provision for Rs. 750 under this head for the Corporation of Calcutta for the last three quarters of 1893-94.

6. During the year under review licenses were renewed for 101 old warehouses, the license for one warehouse was cancelled, and license fees for 10 warehouses still remained to be paid when the year came to a close.

7. The following statement shows the number of applications for license received and their result:—

Number of applications.	Nature of application.	Number sanctioned.	Number refused.	Number pending.
356	Straw, hay, wood, &c., warehouse ...	343	1	12
3	Jute warehouse	1	1	1
359		344	2	13

8. The following statement shows the number of notices issued under section 6 of Act I of 1893, and their result:—

Number of notices issued.	Number served.	Number refused.	Number not served, no trace having been found.	Number not served, parties being away from Calcutta.
653	528	33	82	10

9. The total amount realised during the year ending 31st March 1894 is shown in the following statement:—

		Rs.	A.	P.
License fee for the first quarter of 1893-94	...	7,039	9	2
Do. for the last three quarters of 1893-94	...	20,328	3	7
Mutation fee and miscellaneous ...	...	99	0	0
Total	...	27,466	12	9

10. The following statement shows the receipts and disbursements of the Warehouse Fund during the year 1893-94:—

Receipts.	Amount.	Total.	Disbursements.	Amount.	Total.

STATISTICAL DEPARTMENT,
The 6th August, 1894.

C. E. BUCKLAND,
Secy. to the Govt. of Bengal.

Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of July 1894.

	Inches.	Date.	Hour.
The mean pressure of the month	29·539		
The average pressure of July from 24 years' registers ...	29·537		
The highest pressure in the month	29·767	13th	10
The lowest pressure in the month	29·192	24th	16
The range of pressure	0·575		
	Hours.		
The total number of hours of bright sunshine during the month	102·7		
The maximum possible number of hours of sunshine ...	413·1		
	⊖		
The mean temperature of the month	82·3		
The average temperature of July from 24 years' registers ...	83·5		
The highest temperature in the month	90·8	14th	
The lowest temperature in the month	75·7	11th	
The range of temperature during the month	15·1		
The mean daily range of temperature	8·9		
The greatest range of temperature in one day	12·4	14th	
	Per cent.		
The mean humidity of the month	88		
The average humidity of July from 24 years' registers ...	85		
	Inches.		
The mean vapour tension of the month	0·966		
The average vapour tension of July from 9 years' registers ...	1·002		
The mean cloud proportion of the month	8·25		
The average cloud proportion of July from 17 years' registers	8·06		
The total rainfall of the month	11·34		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	10·02		
The average fall of July from 48 years' registers ...	12·84		
The greatest fall in 24 hours	2·36	24th	
	Days.		
The number of rainy days in the month	26		
The average number of rainy days in July from 24 years' registers	25		
The mean maximum equilibrium temperature of solar radiation during the month	⊖ 139·3		
The mean difference of sun and air temperatures	52·4		
The greatest sun temperature	159·7	20th	
The greatest excess of sun over air temperature	69·6	20th	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	76·5		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	1·6		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	3·2	27th	
	Miles.		
The mean movement of the wind per day	132·4		
The greatest movement of the wind in one day	308·0	12th	
The greatest movement of the wind in one hour	23·0	24th	9 to 10 A.M.

The number of hours with winds from each of the 8 points—
N. 12, N.E. 17, E. 83, S.E. 101, S. 171, S.W. 170, W. 104, N.W. 20, Calm 67.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0·6 higher; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

J. H. GILLILAND,

For Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 6th August 1894.

* Mean for 6 days.

Explanation.—Summary—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the *humidity* of the atmosphere is expressed at percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The mean are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional stations for the period in question stations in the district sending in returns divided by the number of stations. A rainy day is one of which at least a tenth of an inch fell.

for the week ending Saturday, the 4th of August 1894.

DISTRICT OBSERVATIONS.

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received the corresponding space is left blank. If any of the returns are missing the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 1 inch of rain has fallen.

CALCUTTA, *the 7th August* 1894.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 4TH OF AUGUST 1894.

DURING the previous week a small cyclonic storm had passed across South Bengal and through Chota Nagpur, and had filled up near Sutna at the end of the week. In the rear of the storm a heavy wave of monsoon winds flowed over the province, but it was deflected mainly over the south-western and western districts, and the remainder of the province received comparatively little rain. On 29th July, or the first day of the week under review, pressure fell moderately to briskly over the whole province, and became in moderate defect, while at the same time westerly winds began to set in over the west of the province. These westerly winds appeared to shew that the Bombay branch of the monsoon current, represented by the westerly winds, was penetrating across India, and was giving a certain amount of interaction with the branch of the monsoon coming from the Bay, which was giving south-easterly and easterly winds over the remainder of the province. As is generally the case when such interaction occurs, heavy rain began to fall in the western districts of Bengal, and on the 29th many of the Bihar stations reported heavy rain, Bettiah receiving 8·50 inches, Buxar 6·14 inches, Siwan 5·17 inches, and several stations falls of two inches and upwards. Over the remainder of the province, however, rainfall was light. On the 30th pressure had fallen over the eastern half of the province, the fall being largest at Dinajpur, while it had risen over the west and south-west of the province, and a distinct but feeble barometric depression had formed with a centre near Dinajpur, round which a very distinct circulation of winds appeared. Hence conditions had become particularly favourable for rainfall over practically the whole province, and falls exceeding five inches were reported at Atia, Fenny, Harishpur, Cox's Bazar, and Siwan, while very numerous stations reported amounts of more than three inches. On the 31st the feeble depression had moved in a westerly direction, and was lying along the foot of the hills from about Purnea westwards, and on the 1st of August it had almost disappeared, or had become merged into the monsoon trough of low pressure which at this time was lying almost along the foot of the hills. This trough of low pressure continued in this position and in the eastern parts of the North-Western Provinces for several days. Up till the 2nd pressure over Bengal also remained below the normal, but on this date and on the 3rd it was in considerable excess, but owing to a brisk fall on the 4th it again became slightly in defect. It will hence be seen that conditions for the greater part of this period remained favourable for good general rainfall, particularly in the northern and eastern districts, and on several days exceedingly heavy falls were reported. Towards the end of the week, however, as the conditions became less favourable, the rainfall grew much lighter and more local.

Hence during the week under review an average rainfall of about six inches has been reported in Bihar and East Bengal and of nearly five inches in North Bengal. Chota Nagpur has received nearly four inches, and South-West Bengal a little more than three inches. Orissa on the other hand has received less than two inches of rain.

Pressure.—The mean pressure for the week has not varied very much from the normal. Slight excess pressures of about 0·02″ and 0·03″ have been registered at the southern stations in such cases as Cuttack, Balasore, Saugor Island, Calcutta, Chittagong, &c. Towards the north of the province on the other hand slightly defective pressures have been registered, and stations like Jalpaiguri, Dinajpur, Rangpur, &c., report defects of about 0·02″. In Assam the general average pressure has been almost normal.

Temperature.—Owing to the heavy rainfall during the week the mean temperature has averaged about a degree below the normal, the defect being largest in East Bengal and Bihar. In Assam an average defect of 1·3° has been recorded, but the defect has been mainly confined to Sibsagar, and in other districts the temperature has been almost normal.

Rainfall.—Falls of about six inches have occurred in East Bengal and Bihar, while in North Bengal the fall has been 4·56 inches and in Chota Nagpur 3·78 inches. In South-West Bengal an average fall of three and a quarter inches is reported, and in Orissa of a little less than two inches. Large excess falls have therefore occurred in Bihar and in East and North Bengal. In Chota Nagpur and in South-West Bengal the falls have been almost normal, while in Orissa the rainfall has been in decided defect.

Expressed as percentages of the normal rainfall, the actual falls during the week have equalled the following amounts:—South-West Bengal 96 per cent., North Bengal 147 per cent., East Bengal 138 per cent., Bihar 189 per cent., Orissa 67 per cent., and Chota Nagpur 96 per cent. Taking each division to have an equal value in the calculation, the rainfall of Bengal for the week has equalled 122 per cent. of the normal fall.

In the following districts where the falls have been unusually light since the beginning of the monsoon season, the average falls for the week have been as follows:—Rajshahi 1·88 inches, Dinajpur 4·52 inches, Jalpaiguri 15·42 inches, Darjeeling 15·63 inches, Kuch Bihar 3·92 inches, Rangpur 2·86 inches, Muzaffarpur 4·92 inches, and Darbhanga 5·01 inches.

In Assam during the week Silchar has received 4·11 inches, Dhubri 2·75 inches, and Sibsagar 2·61 inches.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 4th of August 1894:—

Meteorological Divisions.	Temperature.						Rainfall.								
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1894.

The extreme variation of temperature		12·5
The maximum temperature		88·0
		Miles.
The highest velocity of the wind in one hour		15
		%
The mean relative humidity		87
The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office		86
		Inches.
The total fall of rain from 29th July to 4th August 1894		0·99
The average fall of the corresponding period for 24 years, Surveyor-General's Office		3·70
The total fall from 1st January to 4th August 1894		30·66
The average fall of the corresponding period for 24 years, Surveyor-General's Office		36·76

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h., 10h., 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers.

Statement of principal commodities carried on the Eastern Bengal State Railway during the month of May 1894.

INCREASES.

	Tons.		Tons.
Rice	4,309	Salt	2,720
Ruhtolla, A. ghát, and a few stations on the Bihar and Northern Sections show increase under this head, due to demand in the Eastern districts where scarcity prevailed.		Ordinary fluctuation.	
		Betel nuts	1,028
		Large despatches from Calcutta to up stations make up the increase.	
Jute, raw	1,103	Stone and lime	2,313
The increase was chiefly in despatches from Kushtea, Pachooria and Sirajganj.		Road metal to Barasat and Ballygunge stations.	

DECREASES.

	Tons.
Coal and coke	1,060
Ordinary fluctuation.	

J. SHAW,
for Examiner of Accounts.

CALCUTTA, *the 2nd August* 1894.

BENGAL CENTRAL RAILWAY.

Abstract of principal commodities carried over the Bengal Central Railway during the month of May 1894, *as compared with the same month of the previous year.*

Statement of principal commodities carried on the Bengal Central Railway during the month of May 1894.

Increases.

	Tons.
Coal	588
For Flotilla consumption and for sugar works at Tarpur.	
Stone and lime	520
Road metal from E. I. Railway to Barasat.	

The increases and decreases in other commodities are due to ordinary fluctuation of traffic, and call for no special remarks.

J. Shaw,
for Examiner of Accounts.

Calcutta, *the 2nd August* 1894.

Weekly Return of Traffic Receipts on Indian Railways.

EAST INDIAN RAILWAY.

RESOLUTION ON THE REPORT ON THE ADMINISTRATION OF THE POLICE DEPARTMENT FOR THE YEAR 1893.

RESOLUTION.

POLICE.

Dated Calcutta, the 14th August 1894.

READ—

The Report on the Administration of the Police Department for the year 1893.

Read also—

The Report for the year 1892 and the orders of Government thereon.

Mr. E. R. Henry held the office of Inspector-General throughout the year, except for a period of 19 days spent on privilege leave, when Mr. A. H. Giles officiated for him. The present report was received in print punctually on the 1st July. The reports from the Divisional Commissioners, which were due to Government on the 20th March, were all received within the month, with the exception of that from the Commissioner of Chota Nagpur, which, as was the case last year, was more than a month late.

2. *Constitution of the force.*—The sanctioned strength of the Bengal Police at the close of the year was 77 superior officers (including 8 probationers), as compared with 89 superior officers (including 15 probationers) at the close

of 1892. The reduction of 12 in the number of superior officers is due to the reorganization of the service sanctioned by Government in its Resolution of the 27th May 1893, the object of which was that District Superintendents of Police should be provided for every district in Bengal, and that Assistant Superintendents should only be provided for the most important subdivisional charges and as a reserve for leave vacancies. The effect of the reorganization has been to increase the number of District Superintendents from 43 to 45, and to reduce the number of Assistant Superintendents from 27 to 19, and of probationers from 15 to 8. The sanctioned strength of subordinate officers and men, including Military and Railway Police was 23,719, against 23,390 at the end of 1892.

3. *Changes in the number of investigating centres and in the recruitment of the investigating staff.*—In accordance with the recommendations of the Police Redistribution Committee, which provide for the reduction of 188 investigating centres, 145 have been abolished during the year, and steps have been taken to still further reduce the number. An important change was also introduced in the system of recruitment of the investigating staff, the appointments of new men (other than those promoted from the grade of head-constable to the grade of Sub-Inspector) being now made on the results of competitive examinations. Only those candidates who are of good moral character and have passed the Entrance examination and satisfied certain physical tests are allowed to compete; selections are not made purely in the order of the marks which candidates obtain, but care is taken to secure a due proportion in the representation of different classes, such as Muhammadans and Hindus, Biharis and Bengalis; and selected candidates are put through a probationary course of instruction after their selection. The number of men selected at the two examinations held in 1893 was 35 and 60 respectively, but it is as yet too early to form any comparison between the men thus selected and those recruited under the old system. The Lieutenant-Governor shares, however, in the belief expressed by Mr. Henry that the new system will lead to the recruitment of a higher and more capable class of investigating officers.

4. *Expenditure by the Department.*—The expenditure on the Bengal Police (excluding the Military Police in the South Lushai Hills, the Presidency Police, and the provincial expenditure on village police and on pounds) for the past financial year was Rs. 43,54,930, the corresponding figure for the previous year being Rs. 43,00,062 and that for 1891-92, Rs 42,26,193. The figures for 1893-94 are, however, departmental figures only, and have not yet been verified by the Accountant-General. The actual expenditure distributed among the several heads in 1893-94 and the two preceding years is shown in the following table:—

Serial number.	Heads of charges.	Actual expenditure for 1891-92.	Actual expenditure for 1892-93.	Actual expenditure for 1893-94.	Increase in 1893-94.	Decrease in 1893-94.
1	2	3	4	5	6	7
		Rs.	Rs.	Rs.	Rs.	Rs.
1	Inspecting agency	1,23,387	1,38,078	1,50, 653	12,575	...
2	Pay of District and Assistant Superintendents	4,60,133	4,44,795	4,72,019	27,224	...
3	Pay of executive police and establishment with good conduct pay and batta allowance	28,33,148	28,66,852	28,47,001	...	19,848
4	Travelling allowance	92,093	93,268	1,01,634	8,366	...
5	Fixed boat establishment	56,983	55,658	57,005	1,347	...
6	Special, regular and contract contingencies	5,14,882	5,63,216	5,91,105	27,859	...
7	Government contribution to the Municipal and Railway Police ...	1,45,022	1,38,195	1,35,510	...	2,685
	Total ...	42,26,193	43,00,062	43,54,930	77,401	22,533
	Net increase ...	...	...	...	54,868	...

The increase of Rs. 54,868 in expenditure over that incurred in 1892-93 is accounted for partly by the appointment of an Assistant Superintendent in charge of the special branch, and by the grant of exchange compensation allowance to European officers, and partly to an increase under the head of "Contract contingencies," due to the repairs of damage done by storms, and to prisoners in many places being escorted by rail or steamer instead of by land, as well as to the excessive rainfall of the year which rendered travelling by boat necessary in the interior of certain districts.

5. *Working of the Town Police.*—The town police force was increased in Backergunge, and in nine districts of the Burdwan, Presidency, Chittagong, and Orissa Divisions. The result of the changes effected should have been summed up in a statement showing the strength of the new force substituted for the old in each district, and the increase or decrease in cost. It appears that the total number of town chaukidars appointed during the year was 406 in place of 332 constables employed in 1892. In the 24-Parganas the experiment of replacing constables by local and acclimatized town chaukidars was tried for the first time in three municipalities, and the system will be still further extended. In the Rajshahi Division the town police consist of a mixed force of constables and chaukidars in all districts, except Darjeeling and Bogra. In the Patna Division the work of the town chaukidars in Champaran, Muzaffarpur, and Darbhanga is said to have been on the whole satisfactory, but in Saran, where the District Superintendent of Police is said to have paid insufficient attention to his duties, the results of the year are far from successful. In Patna City and Dinapore the self-checking system of patrol introduced in 1892 was again worked with marked success, the number of burglaries in the Patna City having decreased from 477 in 1891 to 397 in 1893, while 20 burglars were arrested at night by the rounds officers. In Gaya and Shahabad the system has not proved so successful, and this the Inspector-General of Police attributes to the superior officers not sufficiently interesting themselves in its working details—a complaint which the Lieutenant-Governor hopes will not recur. In the Bhagalpur Division all the districts, except the Sonthal Parganas, employ chaukidars on town duty, and their work is said to have been generally satisfactory, especially in the town of Bhagalpur itself.

The Lieutenant-Governor believes that by the substitution of chaukidars for constables in the ordinary municipalities of Bengal, an increase of efficiency and economy should be secured, but that there are municipalities in which a turbulent element exists which cannot be kept in order by chaukidars alone. In future reports the results of the changes effected should be briefly summarised, showing their financial effect and the advantages supposed to have been gained, and it should be stated whether the substitution of chaukidars for constables has been completed as far as is desirable or not.

6. *Street lighting.*—The exceptional difficulties under which the work of the town police is carried on has been alluded to more than once in former reports, and not the least of these is the want of light which is essential to the efficient guarding of houses and property. The proposal that municipalities in which there are no street lamps should contribute towards the cost of supplying oil for the lanterns of the watch and ward police has not been generally adopted, some municipalities refusing to contribute on the ground of want of funds, or because the expenditure is not legally chargeable to them. In 36 districts, 620 new lamps have been erected, but the Inspector-General believes that this represents but little real improvement. It is not creditable to such municipalities as those of North and South Barrackpore that no street lamps are provided by them.

7. *Rural Police.*—Reports have been called for by Government from Commissioners of Divisions on the working of the Chaukidari Act, and the effect of the changes introduced by the new law of 1892, with special reference to the progress made in extending the provisions of the Act to villages in which it has not hitherto been in force, and to the steps taken for the improvement of the position and status of the chaukidars. These reports are now before Government, but the Inspector-General has briefly summarised in his report the results achieved during the year. From Statement E it appears that the total number of chaukidars in the province in 1892 and 1893 was as follows:—

Class of chaukidars.	1892.	1893.	Increase.	Decrease.
1	2	3	4	5
Under Act VI of 1870	96,787	101,517	4,730	.....
Under Regulation XX of 1817 ...	53,665	48,696	.....	4,969
Number of chakran chaukidars ...	18,629	17,911	.....	718
Other chaukidars	2,991	3,428	437	.....
Total ...	172,072	171,552	5,167	5,687

It will be seen that some progress was made during the year in extending the provisions of Act VI of 1870. In the Burdwan Division 1,251 Act VI men were substituted for Regulation chaukidars, of whom 987 belong to the Bankura district. There are still more than 21,000 Regulation chaukidars in this division—an excessive number—which should be rapidly reduced. The number of chakran chaukidars is 11,383, and the important question of the resumption of chakran lands in this division has lately been under consideration. A procedure for the resumption and assessment of such lands is contained in Part II of Act VI of 1870, and some progress in this direction has already been made. It has now been decided to steadily apply the principles of the existing law and to gradually extend the provisions of the Act to all places to which it is applicable. The Commissioner of the Division has been directed to recommend an officer in each district for appointment as Commissioner under section 58 of the Act, and to take steps for undertaking systematic operations in all districts of the Division without delay. In the Dacca, Presidency, and Chittagong Divisions, and in all the districts of Rajshahi, Act VI of 1870 is in force, and, with few exceptions, all the chaukidars are under the Act. In the Patna Division, 2,426 chaukidars were appointed under Act VI of 1870, and the number of Regulation chaukidars was reduced by 3,322. This action, however, appears to have been confined to Shahabad and Saran, and His Honour hopes that greater attention will now be given to this matter in other districts. In Orissa Act VI of 1870 is not in force, and the state of the village watch is said to be as unsatisfactory as ever. The question of the reorganization of the whole chaukidari system in this Division is now under the consideration of Government.

8. The efforts made to induce men of better position to enlist as chaukidars have met with varying success in different portions of the Province. In the Dacca Division the majority of the population being Muhammadans, the question of caste is of less importance than in other places; but a marked improvement has been effected in the class of men recruited. In Bhagalpur a few Rajputs and Chattris were induced to accept employment, and in the Burdwan Division about 1 in 12 of the men newly appointed are said to be of better caste. In other districts but little improvement seems to have been made. There can be no doubt that in Eastern Bengal generally the improvement in the status of the chaukidar is principally due to the punctuality with which his salary is now paid, and to the fact that there has been a general tendency to raise the rate of salary. The Lieutenant-Governor enquired into this matter during his recent tour in the eastern districts, and was gratified to find that wherever he went the chaukidars appeared to be a fine, smart, well set up body of men, in receipt of regular salaries, and in many cases certainly constituting most respectable representatives of the Musalmans of the delta. This improvement was most marked in the Backergunge, Noakhali and Khulna districts.

9. The habit of treating chaukidars as menial servants has frequently been referred to as one of the causes of the unpopularity of the post, and the Lieutenant-Governor notices with satisfaction that very few instances of such treatment have been reported during the past year. In Birbhum a head-constable and a constable, and in Midnapore a Sub-Inspector and a constable, were punished for requiring chaukidars to do menial work, but no cases are reported from the Dacca and Presidency Divisions, and only one from each of the Orissa, Chota Nagpur, and Chittagong Divisions. In Patna three

instances are reported, and in all the police in fault were suitably dealt with. In regard to the payment of rewards, the Lieutenant-Governor has constantly impressed upon district officers the importance of adequately rewarding good work done by the village police, and of being less indiscriminate in the matter of punishments; but he regrets to observe that in some districts his remarks have not borne fruit. In the Presidency Division a sum of Rs. 758 only was distributed as rewards amongst over 16,000 chaukidars, and in the Burdwan Division only about one chaukidar in every 200 received a reward. In the Rajshahi district the insignificant sum of Rs. 39 was distributed as rewards amongst 3,136 chaukidars, and in Mymensingh 20 per cent. of the force were punished, but only ·05 per cent. were rewarded. In Patna also there was but little improvement in this respect as compared with last year There has, however, been some improvement in the totals for the whole province, the number of chaukidars rewarded by judicial officers having risen from 585 to 593, and the number rewarded departmentally from 859 to 1,273, while the total amount disbursed in rewards has risen from Rs. 7,644 to Rs. 10,367. The percentage of chaukidars rewarded to the total number in the province has risen from ·8 to 1·13, but the Lieutenant-Governor considers that there is still much room for improvement, and he hopes that in future greater attention will be paid to this important question by all district officers.

10. *Additional Police.*—In consequence of the disturbances arising out of the anti-kine-killing agitation in the Patna Division, additional police were quartered in various villages in the Gaya, Shahabad, and Patna districts, the cost being realized from the villagers. The additional force entertained at Krokir-char in the Dacca district in 1892, and at Lahiri in Darbhanga, were retained throughout the year.

11. *Military Police.*—By the reorganization of the force which was sanctioned at the commencement of the year, three companies of 100 men each, including officers, have been formed with their head-quarters at Dumka, Bhagalpur, and Dacca respectively. Detachments from all three companies were sent to Keonjhar in consequence of the disturbances in that State, and detachments from the Dumka and Bhagalpur companies were also on duty in Bihar in connection with the anti-kine-killing agitation. Great attention was paid during the year to instructing the men in drill and musketry practice, and the Lieutenant-Governor is glad to be able to bear witness to the general smartness and efficiency of the force.

12. *Casualties.*—The following table shows the details of casualties during the past three years:—

		1891.		1892.		1893.	
1.	Retirement on pension or gratuity	452 or	1·9 per cent.	420 or	1·8 per cent.	412 or	1·74 per cent.
2.	Resignation	760 „	3·2 „	722 „	3·1 „	728 „	3·09 „
3.	Dismissal ...	588 „	2·5 „	586	2·5 „	624 „	2·66 „
4.	Discharge ...	225 „	·9 „	125	·5 „	220 „	·93 „
5.	Desertion ...	40 „	·2 „	51	·2 „	42 „	·18 „
6.	Death ...	517 „	2·2 „	551	2·4 „	415 „	1·93 „
	Total ...	2,582 or	10·9 „	2,455 or	10·5 „	2,481 or	10·5 „

The average percentage of casualties for the three years previous to 1891 was 12·4. The variations in the figures under the different heads during the last two years are slight, and do not call for any special remark.

13. *Torture and extortion by the police.*—The record of offences of this class is fortunately not a serious one. The number of cases of torture reported fell from 32 to 17, and of these only five were finally returned as true. Two cases ended in conviction and 12 were reported to be false. In 5 of these the complainant was prosecuted under section 211, I. P. C., but only 4 were decided during the year, and in one only was a conviction obtained. None of the cases of torture were of special importance, the worst apparently being that of a head constable and a constable of Mymensingh and a constable of Dacca, who were charged with torturing a boy and causing his death. The last accused absconded, but the first two were convicted and sentenced by the Sessions Judge to five years' and one year's rigorous imprisonment respectively. The High Court, however, took a lenient view of the case, and on appeal acquitted the constable and convicted the head-constable of assault only, sentencing him to a short term of imprisonment.

The number of cases of extortion brought against the police fell from 92 to 70, of which only 14 ended in conviction. The number returned as false was 37, and in 14 of these the complainant was prosecuted, 8 of these cases ending in acquittal, and 4 in conviction, while 2 remained pending at the close of the year. The practical impunity with which false charges of extortion were brought against the police in the Dinajpur district was referred to in last year's Resolution. During the past year the number of cases reported has fallen from 42 to 19. Of these four only were true, and of the remainder prosecutions were instituted against the complainants under section 211 or section 182, I. P. C., in 8 cases, with the result that two ended in conviction and four in acquittal, while the remainder were pending trial at the close of the year. Great attention was paid by the Magistrate of the district, Mr. Tute, to this important question of Police administration, and to him is in a large measure due the credit of the improvement effected. Under Government order No. 5600J., dated 28th December 1893, District Superintendents at head-quarters and Inspectors at sub-divisions have been directed to enquire personally into all cases of torture brought against the police, and the attention of police officers has been drawn to the importance of making a sifting enquiry into all charges in which the police are concerned.

14. *Punishments.*—The following table shows the number of punishments inflicted on members of the police force during the past three years:—

Year.	Judicial convictions under Penal Code.			Under Act V of 1861.			Departmental punishment.		
	Number.	Percentage of officers.	Percentage of men.	Number.	Percentage of officers.	Percentage of men.	Number.	Percentage of officers.	Percentage of men.
1	2	3	4	5	6	7	8	9	10
1891	260	·8	1·2	112	·3	·5	4,234	39·2	14·3
1892	245	·7	1·0	120	·1	·5	4,223	41·0	14·0
1893	237	·4	1·0	126	·3	·5	4,863	42·4	16·7

There has thus been a considerable increase in the number of men and officers departmentally punished as compared with last year, and the Inspector-General accepts this as an indication of closer supervision on the part of superior officers rather than of a falling off in the general good conduct of the force. The Lieutenant Governor is not altogether satisfied with this explanation, and is disposed to think that there is a tendency among District Superintendents to inflict too frequent punishments. He concurs with an observation which has been recorded by Mr. Nolan, the Commissioner of the Rajshahi Division, in his Annual Divisional Report, that in this respect there is often too much zeal and too little justice, and that probably much good would result by making the treatment of police officers in regard to punishments and promotions accord more nearly with that prevalent in other departments. The Inspector-General is requested to look into this matter and satisfy himself that punishments are inflicted with more discrimination than appears to be the case at present. It is observed that the number of men wearing good conduct stripes at the close of 1893 was 9,019, being an increase of 714 as compared with 1892. Good conduct allowances amounting to Rs. 17,656, or sufficient for 1,471 men at the rate of Re. 1 each per mensem, were disbursed during the year, and special money rewards were paid to 2,160 officers and men, while 76 received special promotion.

15. *Inspections.*—Mr. Henry was on inspection tour for 135 days, and Mr. Giles, when acting for him, for 19 days. As Deputy Inspector of the Northern and Western Range, Mr. Giles and Mr. Pratt were out on tour for 197 days in all, and Mr. Daly and Mr. Wilcox for 196 days. The head-quarters of every district and 27 sub-divisions were inspected during the year either by the Inspector-General of Police or by one of the Deputy Inspectors-General. From the statement given in paragraph 39 of the Report, it appears that, generally speaking, there has been a change of Inspecting officers as compared with last year, and that only 12 out of the 45 districts in the province have been inspected twice running by the same officer. In future reports the districts shown in this statement should be arranged in their official geographical order, and not alphabetically, as has been done in the present report.

The Inspector-General has given a complete list showing the number of days spent on inspection duty in each district by the District Superintendent of Police, and the Lieutenant-Governor notices that insufficient inspections were made by Mr. Wilcox (24-Parganas), Colonel Ramsay (Muzaffarpur), Mr. Ryland (Rangpur), Mr. Goldsbury (Jalpaiguri), Mr. Boileau (Saran), Mr. Orr (Mymensingh), Mr. Livesay (Tippera), Mr. Biswas and Mr. Daly (Noakhali), and Mr. Patten (Palamau). On the other hand, in some districts the number of days spent on tour by District Superintendents of Police was far in excess of the prescribed standard. The Lieutenant-Governor agrees with the Inspector-General that no advantage is to be gained by this excessive touring where no improvement in work results, and he approves of the proposal to issue a circular impressing on all officers the necessity of making their inspections more thorough and more instructive to their subordinates.

16. *Crime.*—The incidence of crime in Bengal, division by division, for the two years 1892 and 1893, is shown in the following statement:—

Divisions.	Police.		Population.	Cases (of cognizable crime), *vide* columns 4 and 6 of statement A, Part I, *minus* cases refused under 157, C.P.C., and cases under serial No. 57 in that statement.		Proportion of police to population.	Proportion of police to cases of cognizable crime investigated.				Proportion of cases of cognizable crime investigated to population.			
	1892.	1893.	1891.	1892.	1893.	1893.	1892.		1893.		1892.		1893.	
1	2	3	4	5	6	7	8		9		10		11	
						Policeman. Persons.	Policeman.	Cases.	Policeman.	Cases.	Case.	Persons.	Case.	Persons.
Burdwan ...	3,608	3,653	7,688,818	9,938	10,121	1 to 2,104	1 ,,	2·7	1 ,,	2·7	1 to	773	1 to	759

Patna	4,290	4,498	15,811,014	18,449	17,763	1 ,, 3,515	1 ,,	4·3	1 ,,	3·9	1 ,,	857	1 ,,	890
Bhagalpur ...	2,122	2,111	8,582,490	11,994	10,289	1 ,, 4,065	1 ,,	5·6	1 ,,	4·8	1 ,,	715	1 ,,	834
Orissa	1,511	1,537	4,047,752	4,947	5,338	1 ,, 2,633	1 ,,	3·2	1 ,,	3·4	1 ,,	848	1 ,,	758
Chota Nagpur ...	1,586	1,637	4,628,792	5,019	5,818	1 ,, 3,011	1 ,,	3·2	1 ,,	3·7	1 ,,	922	1 ,,	795
Grand Total ...	22,328	22,615	70,558,141	87,570	85,962	1 ,, 3,119	1 ,,	3·9	1 ,,	3·8	1 ,,	805	1 ,,	820

The proportion of police to cognizable crime investigated in Bengal in 1893 was one policeman to 3·8 cases, which is lower than the proportion in any other province in 1892, except Madras, where it was 1 to 4·9. In the latter calculation, however, petty cases under special local laws are included, and if these be excluded, the proportion will be higher in Madras than in Bengal. In the North-Western Provinces the proportion of police to investigated crime was one policeman to 3·5 cases, and in Bombay it was 1 to 1·3.

17. *Police tests.*—The following table compares the working of the police during the past three years, according to the tests which have been prescribed for the purpose:—

		Percentage of cases investigated by police to cases reported, (*a*1).	Percentage of police cases ending in conviction to cases decided, (*a*4).	Percentage of persons convicted in police cases to persons sent up for trial. *b*(3).
1		2	3	4
Classes I to V taken together	1891	75	68	53
	1892	75	70	55
	1893	66	74	59
Classes I to VI taken together	1891	81	81	69
	1892	81	83	71
	1893	75	86	75

According to test (*a*1), the figures for the past year are lower than in the two preceding years, because the rules about investigating petty cases have been relaxed; but according to tests (*a*4) and (*b*3) they show a steady improvement, which has been attributed by the Inspector-General of Police mainly to the employment of Court Sub-Inspectors as prosecutors in Magistrates' courts. Mr. Henry points out that under the new system of recruitment officers with higher educational qualifications are being drafted into the police force, and that it will be possible to select from them an improved class of Court Sub-Inspectors better qualified by education and knowledge of law to conduct cases in the Courts. The most important test of police work is (*a*4), and though the percentage according to this test (74 per cent. for classes I to V) was lower than the percentage in 1892 in any other province, except Assam and Punjab, in each of which it was 70 only, the results as compared with those of previous years cannot be considered unsatisfactory.

18. *Reported crime of the province.*—The Inspector-General has shown in the table in paragraph 47 of his report the number of cognizable and non-cognizable offences reported in the province during the past two years; but here, as in other places where he deals with crime by classes, or remarks on the tendency of crime to increase or decrease, the corresponding figures for at least ten years should be given, and he should bring forward statistics to illustrate his remarks, similar to those given in Departmental Return No. I.

The number of cognizable and non-cognizable offences reported during the last four years is as follows :—

	1890.	1891.	1892.	1893.
1	2	3	4	5
Cognizable	117,443	128,472	146,185	137,898
Ditto excluding sanitary offences (serial 57).	89,041	95,553	106,106	101,803
Non-cognizable	116,554	119,072	121,624	121,490

The total decrease in cognizable offences was thus 8,287, but excluding sanitary offences, which fell off by 4,096, the net decrease in cognizable crime is 4,191. In the Inspector-General's opinion the decrease is smaller than might have been expected, considering the improvement in the prices of food-grains in 1893, and he attributes this to the sustained improvement in the reporting of crime in consequence of the discretion allowed to the police to abstain from enquiring into certain petty classes of theft, and to the increased attention paid to holding chaukidari parades, and in questioning chaukidars as to occurrences in their villages. Prices in 1893 were, however, higher at least in Eastern Bengal than in 1891.

19. *False cases.*—The total number of cases declared false was 6,103, or 150 less than in the preceding year, and the percentage of such cases to the number reported was 4·4 as compared with 4·2 in 1892, and an average of 5·4 in the three preceding years. The number of false cases in which prosecutions were instituted fell from 743 to 725, but there was a rise from 246 to 270 in the number in which convictions were obtained. The improvement was most marked in the Dinajpur district, where the number of successful prosecutions under section 211, I.P.C., in false cases rose from 9 to 21,—a result which is attributed to the personal attention paid to the subject by Mr. Tute, the District Magistrate. In marked contrast to this in Rangpur, with a larger number of false cases, only two were successfully prosecuted. Under Mr. Marindin in Bhagalpur, out of 40 prosecutions, 25 resulted in the conviction of the accused. The number of cases in which compensation was awarded under section 560, C.P.C., fell from 805 to 676. The falling off is to be regretted, as the power given to Magistrates under the section is one of the most useful means of checking the indiscriminate institution of false prosecutions.

20. *Abstention from enquiry by the police under section* 157, *C.P.C.*—The percentage of cases of house-breaking in which the police abstained from making enquiry, to the number reported, was 33·9, as compared with 10·5 in

1890, 13·4 in 1891, and 38·2 in 1892. In theft cases the percentage was 16·5, the corresponding figures for 1890, 1891 and 1892 being 8·7, 10·3, and 17·5 respectively. The variation in the figures of different divisions is remarkable and in some divisions the abstentions seem to have been unduly numerous. While the percentage of burglary cases not enquired into to the number reported was over 40 in the Chota Nagpur, Bhagalpur, and Patna Divisions, it fell below 30 in the Presidency, Rajshahi, and Dacca Divisions, and below 20 in Chittagong and Orissa. In the Patna Division, of the number of burglary cases investigated, only 1 in 12 was successfully prosecuted; and in Gaya, out of 2,247 cases reported and 924 investigated, only 69 ended in conviction. These figures indicate that the most careful supervision on the part of District Superintendents of Police is necessary to prevent the abuse by subordinate police officers of the powers given to them by section 157, C. P. C. General instructions as to the manner in which these powers should be exercised have been issued by Government and are embodied in the revised Police Code. The Inspector-General remarks that the Code was not published in time for these instructions to have any effect on the figures of the year under review: they were, however, issued and circulated before the Code was published, and the intention of Government in regard to them was fully explained in the Resolution on the Report on the administration of the Police for 1891. As was stated in that Resolution, the instructions are intended rather by way of general guidance than as laying down any rigid rule to be observed in all cases, and the Lieutenant-Governor hopes that district officers will see that they are intelligently acted up to by the subordinate police.

21. In paragraph 56 of his report the Inspector-General has given a general analysis of crime, but it would have been better if the information had been thrown into the form of a table showing the figures for former years, as follows:—

Year.	Number of cases—			Number not enquired into.	Number declared false.	True cases.	Enquired into—			Number of convictions.	Percentage of convictions to true cases.
	Reported true during the year.	Taken up from the preceding year.	Total.				By police Sub-Inspector.	By order of Magistrate.	Total.		
1	2	3	4	5	6	7	8	9	10	11	12
1889	119,656	1,476	121,132	6,562	6,995	107,575	93,823	3,224	97,047	47,226	41·3
1890	117,443	1,787	119,230	4,910	6,417	107,903	94,116	3,016	97,132	49,050	43·4
1891	128,472	1,247	129,719	6,740	6,631	116,348	102,198	2,662	104,860	54,779	44·5
1892	146,185	1,239	147,424	17,977	6,253	123,194	107,516	2,542	110,058	64,328	45·5
1893	137,898	1,102	139,000	15,112	6,103	117,785	102,705	2,862	105,567	60,252	45·3

It will thus be seen that there has been a steady increase in the percentage of cases ending in conviction to the number of true cases reported. As regards persons, the Inspector-General has given a statement on page 43 of the report, showing the proportion of persons convicted and acquitted to the number arrested, as well as to the number brought to trial. These ratios appear progressively good, but they are calculated on an unsound basis, and the statement itself is faulty, inasmuch as the distinction between the percentage of convictions to total arrests, and between the percentage of convictions to persons brought to trial, rests solely on the accident of persons having been arrested, without taking into account those whose cases were still pending at the close of the year. The proportion should be calculated on the number of persons whose cases were actually disposed of during the year; and the percentage of persons convicted and of persons acquitted in such cases should aggregate 100. Calculated on this basis, the following table shows the number of persons convicted and acquitted during the year, and the percentage of such convictions to the total number of persons whose cases were disposed of:—

Year.	Convicted—		Total.	Acquitted—		Total.	Total disposed of.	Percentage of convictions.	Percentage of acquittals.
	By Magistrate.	By Sessions.		By Magistrate.	By Sessions.				
1	2	3	4	5	6	7	8	9	10
1889	66,997	1,318	68,315	33,634	1,365	34,999	103,314	66·1	33·9
1890	68,673	1,230	69,903	33,771	1,041	34,812	104,715	66·8	33·2
1891	73,559	1,463	75,022	34,552	1,222	35,774	110,796	67·7	32·3
1892	84,008	1,668	85,676	34,444	1,348	35,792	121,468	70·5	29·5
1893	79,922	1,463	81,385	32,644	1,100	33,744	115,129	70·7	29·3

There has thus, with regard to persons as well as cases, been a steady improvement during the last five years in the results of trials and in the percentage of convictions.

22. *Results of Sessions cases.*—The total number of cases tried before the Court of Sessions was 1,123, of which 781 ended in conviction and 342 in acquittal. Out of 2,563 persons put on trial in these cases, 1,463 were convicted and 1,100 were acquitted. The percentage of convictions in cases rose from 67·8 to 69·5, and in persons from 55·3 to 57·0. These figures show that, as regards both persons and cases, there has been a decided improvement in the results of Sessions trials as compared with 1892. As regards persons committed for trial, out of the 46 districts, 32 (as against 29 last year) secured the conviction of 50 per cent. or more: as regards cases, Manbhum is the only district in which the number ending in acquittal was in excess of the number ending in conviction. The Commissioner attributes the failure at the Manbhum Sessions—and his remarks apply equally to the Hazaribagh and Lohardaga figures—to the long delay between commitment and trial, and to the want of careful supervision on the part of the police. The average detention of prisoners tried at the Sessions was 86 days in Hazaribagh, 70 at Ranchi, and 55 at Purulia. Such delays are excessive, especially at Ranchi, which is the head-quarters of the Judicial Commissioner, and the Lieutenant-Governor hopes that arrangements may be made for the more frequent holding of Sessions at these places. In the Patna Division the results of Sessions trials were unsatisfactory in all districts, except Shahabad, Champaran, and Saran. With the exception of Manbhum, Darbhanga shows the worst results of any district in the province, only 16 persons having been convicted against 35 acquitted. In Muzaffarpur only 33 persons, and in Gaya only 23 were convicted, against 53 and 28 respectively acquitted. As remarked by Mr. Caspersz, (who submitted the District Report from Chittagong as Magistrate, and had been Sessions Judge throughout the greater part of the year) one of the chief causes of the break-down of cases at the Sessions is the failure on the part of Magistrates to sufficiently realize that it is a duty they owe to the accused to thoroughly sift cases before commitment, carefully scrutinizing police diaries, and clearing up discrepancies in cases where the accused are ultimately committed for trial. With these remarks the Lieutenant-Governor entirely agrees, and he trusts that they will be borne in mind by all Magistrates when committing cases for trial to the Sessions.

23. The number of true cases reported during 1893 and previous years is shown in the following table:—

	1886.	1887.	1888.	1889.	1890.	1891.	1892.	1893.
1	2	3	4	5	6	7	8	9
Class I ...	2,891	2,901	2,872	2,818	2,874	2,765	2,817	2,843
,, II ...	4,542	4,546	4,622	4,704	4,340	4,824	4,606	4,568
,, III ...	22,803	22,234	25,247	27,824	25,085	28,288	38,325	31,463
,, IV ...	2,682	2,427	2,405	2,334	2,210	2,220	2,268	2,082
,, V ...	40,090	36,131	38,381	41,082	38,078	39,841	44,870	43,098
,, VI ...	27,003	27,753	30,159	33,950	38,439	43,903	51,986	47,748
Total ...	99,941	95,992	103,686	112,660	111,026	121,841	130,932	131,792

The decrease of 8,140 in the total number of true cases reported occurred chiefly in classes III, V and VI.

24. From paragraph 61 to paragraph 150, the Inspector-General of Police, according to precedent, deals with the details of the year's crime, class by class and Division by Division. In future reports it will be convenient for him to commence his remarks on each class by a brief statement shewing the principal heads of crime included in that class. Such a statement is prefixed to his report on class III (paragraph 85).

25. *Class I.—Offences against the State and public tranquillity.*—There was an increase of 26 cases only under this class as compared with 1892. Cases of coining fell from 162 to 128, and of 173 persons tried in these cases, 87 were convicted and 86 acquitted. True cases of rioting show but little variation during the last five years, the number for 1893 being 2,218, against 2,192 in 1892 and an average of 2,204 in the three preceding years. That most of the cases tried were petty in their nature is indicated by the fact that only 229 out of the 10,510 persons actually tried came before the Sessions Court. In the

Burdwan, Presidency, Rajshahi, Chittagong, and Bhagalpur Divisions there was a falling off in the number of true cases of rioting reported; and in the Patna, Dacca, and Orissa Divisions there was an increase of 111, 34 and 13 cases respectively. The increase in the Patna Division is partly accounted for by the outbreak of lawlessness, due to the strained relations between Hindus and Muhammadans on the subject of the slaughter of cattle. In Gaya there were 17 occurrences from this cause, five cases, in which 30 persons were concerned, resulting in conviction, the remaining cases proving unsuccessful on trial. The quartering of additional police on the localities concerned in these riots has had an excellent effect, and there has now been a cessation of disturbance. Two riots in Shahabad and Saran were specially serious because of the evidence they bore of premeditation and conspiracy on the part of a large body of Hindus who collected secretly from considerable distances, and appeared unexpectedly on the scene, prepared to use violence in support of their determination to put down or to punish the slaughter of cattle. In the first case, which occurred at Koath, the riot arose out of a dispute in connection with the disappearance of a Brahmini bull, and five Muhammadans and seven Hindus were prosecuted and convicted, a force of punitive police being also quartered in the village. The other and still more important case occurred in the village of Basantpur in the Saran district. A mob of Hindus attempted to rescue a number of cattle that were being taken to Dinapore for commissariat purposes, and had been placed for safety inside the thana under the protection of the Police. Inspector Gyatri Prosonno Ghosal, with a small force of police, after giving the rioters ample warning, was compelled to fire on them, with the result that two of them were so severely wounded that they subsequently died. Although the accused were ultimately acquitted for want of sufficient identification, the action of the Inspector in ordering his men to fire on the rioters was held by the Judge who tried the case, and by the Government, to have been justified, and he has since been rewarded with promotion for the courage and due sense of responsibility shown by him on the occasion. In the Dacca Division there has been an increase of 34 in the number of true cases of riot, and this in spite of the extensive preventive measures taken under sections 106 and 107, C. P. C., in all districts of the division, with the exception of Mymensingh. No doubt, however, as Mr. Savage has stated, in a district like Backergunge, where rights and tenures are in a state of inextricable confusion, possession is considered more than nine points of the law, and it is generally accepted as cheaper and easier to fight and run the risk of punishment, than to seek redress in the Civil Courts. In the Rajshahi district an important case of riot occurred between two opposing members of the Nator family, known as the Bara and Chota Taraf, and occupied the time of the Courts for many days. In the course of the riot a man's head was cut off and carried away, and the body was claimed by both parties as that of one of their adherents. In the Chittagong Division, the only case of any importance was one in which Mr. King, of the Assam-Bengal Railway, was wounded by villagers armed with fishing spears and lathies. In this case eight of the accused were convicted and sentenced to long terms of imprisonment.

26. *Class II.—Serious offences against the person.*—Cases of this class fell from 4,666 to 4,568, the decrease occurring under all heads except "Hurt by dangerous weapons," "Attempts at and abetment of suicide," "Other murders," and "Attempts at murder." The percentage of convictions in cases and for persons tried shows improvement. In the former the percentage was 45·7, against 43·3 in 1892 and an average of 43·4 for the four preceding years, and in the latter it was 48·9, against 45·6 in 1892 and an average of 44·9 for the four years from 1889 to 1891. Of the 6,861 persons sent up for trial, 1,166 were tried by the Sessions Court. Here also there was an improvement as compared with former years, the percentage of convictions having risen from 47·9 in 1889 and 50·4 in 1892, to 52·3 in 1893. The number of true cases of murder reported increased from 351 to 356. The percentage of these cases ending in conviction was 25·5, or practically the same as last year; but the percentage of persons convicted to the number tried rose from 20·7 to 25·5. There were five cases of murder by dacoits, and 10 by robbers, against 8 and 15 respectively in 1891. The one case of murder by robbers in the Presidency Division occurred in the 24-Parganas, and in this a constable was beaten to death at night by some

robbers, whom he had surprised in the act of robbing a goldsmith's shop. The murderers succeeded in escaping detection; but, as the Inspector-General points out, the case illustrates the desirability of having the watch and ward police working in pairs—an arrangement that has already been carried out in most towns. "Murders by poison" have fallen from 21 to 16, but under "Other murders" there was an increase of 18 cases, from 307 to 325. In the Burdwan Division, the results of trials under the latter head were the worst of any division in the province, the number of persons convicted being only 7, to 44 acquitted. A remarkable case occurred in the Khulna district, in which the accused, being enraged with his wife, a girl of 11 or 12 years of age, for not supplying him with water, attacked her and gouged her eyes out, causing her death. The man was sentenced by the Sessions Judge to be hanged, but the sentence was commuted by the High Court to one of seven years' transportation. In the Patna district an unhappy case occurred in which a post-office employé, in a fit of insanity, shot his bearer dead. An extraordinary case is reported from the Cuttack district, in which some raiyats, who were resisting distraint of their crops, severely injured one of the servants of the zamindar, and in order to support a charge of murder against the latter's party killed an old man of their own side.

27. *Class III.—Serious offences against property.*—There has been a decrease of 1,872 cases in this class, the number having fallen from 33,325 to 31,453. The decrease occurred under all serials of crime, except in cases of house-trespass (serial 37), in which there was an increase of 23 only. There was a decrease of 91 in true cases of dacoity, the number having fallen from 317 in 1892 to 226. The remedial measures taken to check this serious form of crime were enumerated in last year's report, and the Lieutenant-Governor is pleased to think that they have already met with a fair measure of success. With the exception of the Chota Nagpur Division, where the increase was merely nominal, the only divisions which do not show a decrease in true cases of dacoity are Burdwan and Dacca, where the numbers rose from 42 and 18 to 62 and 26 respectively. Of the 62 cases in the Burdwan Division, no less than 27 occurred in the Midnapore district and 21 in Bankura. In these districts there has been in the past a noticeable suppression of crime, and the police either did not report cases, or reported them as minor offences. Instances of this suppression were brought to light during the year, and the officers to blame were punished. In Bankura a case which occurred as far back as 1890 was detected, two persons being sentenced to 10 years' imprisonment each—an excellent piece of work for which the credit is due to Sub-Inspector Ram Sadoy Mookherjee. A notorious bad character, Sarfaraz Khan, who is believed to have organized several dacoities in this district, was imprisoned during the year, and his organization has been broken up. In the Dacca Division the chief increase occurred in the Mymensingh district, where the number of cases rose from 6 to 17. In the opinion of the Inspector-General, the district is underpolieed, and this defect was noticed also by the Police Redistribution Committee who have recommended an increase to the district force of 9 officers and 80 men. In the Rajshahi Division the decrease in the number of cases is most marked in the Rangpur and Dinajpur districts, and is attributed by the Commissioner to the cessation of the agricultural distress which aggravated crime of this kind beyond the normal standard in 1892. At the same time he notices the improvement in the working of the police as a contributory cause. In Rangpur an important case was brought to a successful issue through the courage of the complainant who fired on the dacoits, and the promptness of a head constable who arrested some of the men as they were about to leave by train. Five men in this case were sentenced to ten years' imprisoment each, and the head-constable and complainant were rewarded. In the Patna Division the number of cases of dacoity fell from 76 to 42, the decrease being most conspicuous in the Gaya district, where occurrences under this serial fell from 42 to 11. Of these, however, not a single case was detected—a result which is discreditable to the district police. The decrease in the number of cases is attributed by the Magistrate to the preventive measures taken against bad characters living in the centre of the district, who had been neglected in former years, and who were responsible for the great outbreak of dacoity in

1891 and 1892. That this is probably the correct explanation of the decrease in the number of cases is borne out by the fact that there was no decrease in the Jahanabad subdivision, where least attention was paid to bad characters—a reproach which the Lieutenant Governor hopes will be removed during the present year.

28. Cases of robbery fell from 197 to 184, but while the percentage of convictions in cases has fallen from 42·6 to 42·3, that of persons has risen from 52·4 to 59·9. The number of true cases of mischief by fire rose from 375 to 396. Only 23 persons were convicted in these cases against 113 acquitted. The worst Divisions in this respect are Rajshahi and Presidency, with 97 and 72 cases, respectively, and only one person convicted.

29. *Class IV.—Minor offences against the person.*—The number of cases under this class fell from 2,268 to 2,082. Judicial results show a slight falling off, the percentage of convictions in cases being 21·1 against 21·7, and that of persons 28·2 as compared with 30·1 in 1892. As the majority of these offences are compoundable, more favourable results can hardly be expected.

30. *Class V.—Minor offences against property.*—Cases of this class decreased from 44,870 to 43,098, and if burglaries be included, the figures for the two years become 76,219 true cases in 1892 and 72,715 in 1893. The number of true cases of burglary fell from 31,349 to 29,617, being a decrease of 1,732 cases, and of theft from 30,529 to 29,098, or a decrease of 1,431. That the decrease is not more marked, considering the favourable harvests of 1893, may be attributed to the improvement in reporting occurrences. About 66 per cent. of burglary and 72 per cent. of theft cases were investigated, and in the former only about 1 in 9, and in the latter less than 2 in 5, were successfully worked out. In the Patna Division there was a decrease of 859 cases of burglary as compared with last year, the decrease occurring chiefly in the Gaya and Champaran districts. The percentage of cases in which the police abstained from enquiry is still too high, though it has fallen from 53 to 40·7, the figures for the Darbhanga district for the two years being 70·7 and 51·8. In the Darbhanga district, moreover, the great disproportion between the number of burglaries and thefts, of which there were 1,461 and 441 cases respectively, leaves no room for doubt that crime under the latter serial is still largely concealed, and the attention of the District Officers should be specially directed to the matter. As an illustration of the successful working of the anthropometrical system may be instanced a case of theft which occurred in the 24-Parganas, in which the accused, who had taken service under an assumed name, was identified by anthropometric measurements, and three previous convictions having been proved against him by this means, was sentenced to four years' rigorous imprisonment.

31. *Class VI.—All other cases.*—There has been a net decrease of 4,238 cases under this class, which is accounted for chiefly by a decrease of 4,098 under "Public and local nuisances," and of 634 in prosecutions under the Salt Act. Prosecutions under the Excise laws fell from 2,732 to 2,509. The number of cases of bad livelihood instituted rose from 2,638 to 2,944, and of these, 151, as compared with 91 in 1892, were instituted by petition before the Magistrate. In Lohardaga, out of 19 cases prosecuted, only one proved successful, and this very unsatisfactory result is no doubt due to the inordinate delay in taking up cases, the average duration of which from the date of issue of process was 135 days. In Palamau there were only 4 prosecutions during the year, and not a single one proved successful. In Singhbhum and Burdwan, results were almost as bad, only one out of 16 prosecutions in the former and 7 out of 23 in the latter ending in conviction. The importance of trying a certain number of these cases in the villages of the accused has been referred to in previous years, and the Lieutenant-Governor notices with satisfaction that the number of cases so tried has risen from 843 to 1,168. Instances of delay, however, in disposing of cases are still very numerous. Thus in Jessore one case lasted 596 days from the date of issue of process, one in Bogra lasted 280 days, and one in Midnapore 244 days, while in seven other districts cases are shown as having lasted over 200 days. Judicial results for the whole province show a great improvement, and are the best on record for many years, 72 per cent. of the cases instituted, as compared with 71 per cent. last year, having proved successful.

The number of persons shown in the registers as under surveillance at the close of the year was 42,107, as compared with 45,151, and the decrease is attributed to the greater attention paid to the subject, which has led to the exclusion from the registers of some persons who had hitherto been needlessly included. A confidential register, containing the biographies of all persons registered for C. class surveillance, has been opened at the head-quarters of each district for the Magistrate's information, and he can thus satisfy himself whether the surveillance is really necessary or not, and whether it may safely be relaxed. The number of salt prosecutions fell from 2,006 to 1,099, the decrease occurring chiefly in Chittagong, Midnapore, and the Orissa Division, the latter being the tract where it has recently been asserted in the House of Commons and in the native newspapers that there had of late been unusual and excessive activity in prosecuting such cases. As an average, 15 seers of salt was attached for each person convicted.

32. *Non-cognizable crime.*—The following table shows the increase or decrease under each class of non-cognizable crime in 1892 and 1893:—

	Number of cases.		Increase.	Decrease.
	1892.	1893.		
1	2	3	4	5
Class I ...	8,994	9,278	284	.....
,, II ...	20	20	.....	.....
,, III ...	823	959	136	.....
,, IV ...	57,264	58,252	988	.....
,, V ...	10,015	10,958	943	.....
,, VI ...	13,585	13,576	.....	9
Special laws ...	30,923	28,447	.....	2,476
Total ...	121,624	121,490	2,351	2,485
Net decrease ...	.....	.....	.....	134

None of the cases call for special remark, but the Lieutenant-Governor notices that, as regards judicial results, there is, in many districts, a remarkable excess of acquittals over convictions. Thus in Midnapore the number of persons acquitted to persons convicted was 1,469 to 1,419, in Bogra it was 341 to 336, in Chittagong it was 1,306 to 1,032, in Champaran it was 1,165 to 797, and in Purnea it was 555 to 456. Again, in Palamau there were 199 persons acquitted to 156 convicted, whereas in the neighbouring district of Manbhum there were 516 convictions and only 43 acquittals. Such figures awaken the fear that sufficient care is frequently not taken by Magistrates to see that there is fairly strong *primâ facie* evidence against the accused before the prosecution is admitted.

33. *Remands.*—The following table shows the percentage of remands in police cases sent up for trial:—

	Percentage of A forms disposed of at first hearing.	Percentage of A forms remanded once.	Percentage of A forms remanded twice.	Percentage of A forms remanded thrice.	Percentage of A forms remanded four times.	Percentage of A forms remanded five times.	Percentage of A forms remanded six times.	Percentage of A forms remanded more than six times.	Pending.
1	2	3	4	5	6	7	8	9	10
1890 ...	34·0	19·8	12·8	9·7	6·9	4·3	2·7	5·5	2·4
1891 (*a*) ...	30·9	22·3	15·2	10·2	6·9	4·5	2·5	4·9	2·6
1892 (*b*) ...	37·8	24·5	15·2	9·0	5·1	2·7	1·5	1·7	2·1
1893 (*b*) ...	36·8	24·5	15·8	9·1	5·2	2·6	1·3	1·8	2·4

(*a*) Including Chittagong Hill Tracts.
(*b*) Excluding ditto ditto.

The percentage of A forms disposed of at the first hearing and of those remanded more than six times is not quite so good as in 1892, but the variations are slight, and the figures are a great improvement on those of former years.

The Lieutenant-Governor is glad to observe that the improvement noticed last year has been generally maintained in all Divisions.

34. The number of cases of security for keeping the peace under section 107, C. P. C., has fallen from 4,020 to 3,938, being a decrease of 82 cases. In future reports it should be stated how many of the persons required to find security were able to do so, and how many had to go to jail in default.

35. *Anthropometry.*—A detailed report on the working of the anthropometric system for the identification of criminals was submitted to Government on the 1st May 1894, and the Inspector-General has not therefore thought it necessary to do more than make a few passing remarks on the subject. It would, however, have been well in this report to have briefly summarized the results attained and to have shown the number of criminals actually identified by means of the system during the year. The instruments used in measuring have been improved by mechanical additions which reduce the chances of inaccuracy in taking measurement to a minimum, the system of search has been made exhaustive, and the use of thumb impressions as the final test in the office of search has been adopted with the most successful results. From the separate report referred to above, it appears that the measurements of over 11,000 dangerous and habitual criminals have been permanently recorded. The system was put to the test of actual working for the first time towards the close of the year, and instructions were issued to all District Superintendents of Police requiring them to account separately for all unidentified persons in their districts, and to submit their nominal roll and measurement cards to the central office. The number of successful identifications thus secured in the eight months up to the 1st April 1894 was 48, and it is interesting to compare these figures with the corresponding figures in France, where in the second year of the working of the Bertillon system, the number of successes under similar conditions was only 49. These results justify the belief expressed by the Inspector-General that the system in Bengal has now been established on a firm and practical working basis, and that in a few years, especially if the system is introduced in the North-Western Provinces, the Central Office will be able to account for a large proportion of the persons who would otherwise have remained unknown to the police. The Lieutenant-Governor is glad to hear that cordial assistance was rendered to the police engaged in measuring habituals by the officers of the Jail Department.

36. Mr. Henry brings to the notice of Government the good work done by Messrs. Giles, Daly, Pratt and Wilcox as Deputy Inspectors-General, and acknowledges his special obligations to Mr. Showers, who acted as his Personal Assistant throughout the year. The names of the District Superintendents of Police, Assistant Superintendents, and Inspectors who are mentioned in paragraph 42 of the report will be noted in the Appointment Department.

37. To Mr. Henry himself the thanks of Government are due for the zeal with which he has devoted himself to police work. His management of the department has been sound and sensible, and in particular he has developed anthropometry with such assiduity and energy that he has placed it on a firm basis as a useful agency for the identification of criminals.

By order of the Lieutenant-Governor of Bengal,

H. J. S. COTTON,

Chief Secretary to the Govt. of Bengal.

IRRIGATION OPERATIONS OF CANALS IN BENGAL DURING THE RABI SEASON, 1893-94.

No. 1029*I*.

GOVERNMENT OF BENGAL—IRRIGATION DEPARTMENT.

Dated Calcutta, the 14th August 1894.

RESOLUTION.

READ—

Statements Nos. I, II and III showing irrigation operations of canals in Bengal during the *rabi* season, 1893-94.

OBSERVATIONS.—The area irrigated during the *rabi* season of 1893-94 was 76,762 acres against 133,202 acres in 1892-93, showing a decrease of 57·62 per cent.

2. The rainfall during the year in each of the eight districts was less than that of the previous year, the average being 1·04 inches against 4·71 in 1892-93. The excess rainfall of the preceding year was, however, mainly in February, and there was a heavier fall in October 1893 than in October 1892, which materially affected the area leased.

3. From the Midnapore Canal, where there was no irrigation of rabi in 1892-93, 6,213 acres of boro rice were irrigated during the year, while from the Eden Canal 138 acres only of boro rice, sugar-cane and potatoes, were irrigated against 2,191 acres in 1892-93, showing a decrease of 2,053 acres. In the Sone Circle the area irrigated was 60,061 acres less than that irrigated in 1892-93, and in the Orissa Circle the decrease was 539 acres.

4. The details of the increase or decrease in the irrigation of the *rabi* crops from each canal during the year 1893-94, compared with those of the previous year, are given in the following statement:—

Canal.	Areas irrigated in rabi season.		More.	Less.
	1892-93.	1893-94.

ORDER.—Ordered that a copy of this Resolution and of the statements Nos. I, II and III be published in the *Calcutta Gazette* and submitted to the Government of India, Public Works Department, for information.

Ordered also that copies of this Resolution and of the statements be forwarded to the Commissioners of the Orissa, Burdwan, and Patna Divisions, the Collectors of the Cuttack, Midnapore, Burdwan, Hooghly, Patna, Shahabad, Gaya, and Saran districts, the Superintending Engineers of the Orissa, South-Western and Sone Circles, and the Examiner of Public Works Accounts, Bengal, for information.

By order of the Lieutenant-Governor of Bengal,

C. W. ODLING,

Secretary to the Government of Bengal.

CALCUTTA,
The 9th August 1894.

K. H. STEPHEN,
Under-Secy. to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 11th August, 1894.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
	BENGAL.		
BURDWAN DIVN.			
1	Burdwan Aug. 11, '94	1·22	Weather—seasonable. Transplantation of *aman* progresses rapidly. Standing crops doing well. Fodder and water sufficient. Prices of common rice:—
	Kalna ...	0·93	
	Katwa ...	2·58	
	Raniganj ...	5·69	
			Srs.
			Burdwan ... ... 11½ to 14 }
			Kalna ... ... 10 to 13 }
			Katwa ... ... 12½ } per rupee.
			Raniganj ... ... 14 }
2	Birbhum ,, 11, '94	3·88	Transplantation still in progress. Young paddy and sugarcane look pretty well so far. Common rice sells from 13 to 16 seers per rupee. Cattle doing fairly well, but some disease reported from Rampur Hát.
	Rampur Hát ...	2·45	
3	Bankura ,, 11, '94	2·72	Weather—seasonable. Transplantation still going on. Prospects generally fair. Coarse rice selling at 16 seers per rupee both at Sadar and Vishnupur.
	Vishnupur ...	0·23	
4	Midnapore ,, 11, '94	2·46	Weather—rainy. Prospects continue favourable. The damage in Contai will be compensated by the deposit of silt. Transplantation in full swing. Standing crops doing well. Prices of common rice:—
	Contai ...	0·31	
	Tamluk ...	1·33	
	Ghatal ...	4·50	
			Srs.
			Sadar ... ... 14 }
			Contai ... ... 12½ }
			Tamluk ... ... 11 } per rupee.
			Ghatal ... ... 12 to 14 }
5	Hooghly ,, 11, '94	1·11	Ordinary monsoon weather. Prospects of all crops good except in Kristanagar (Serampore), where jute and *aus* are said to be no more than 4 annas. Prices rising gradually. Prices of common rice:—
	Serampore ...	0·46	
	Jahanabad ...	2·17	
			Srs.
			Sadar ... ... 10 }
			Serampore ... ... 10 to 11½ } per rupee.
			Jahanabad ... ... 13 }
6	Howrah ,, 11, '94	1·74	Weather—cloudy and cool. Prospects of crops favourable. Transplantation of paddy continues. Prices continue normal. Rice sells at—
	Ulubaria ...	0·29	
			Srs.
			Howrah ... ... 10 }
			Ulubaria ... ... 11½ } per rupee.
PRESIDENCY DIVN.			
7	24-Parganas ,, 11, '94	1·02	Weather—cloudy and rainy. *Aus* and jute doing well. Transplantation of *aman* going on. Cattle-disease reported from Barasat. Fodder and water sufficient. Rice sells at—
			Srs. c.
			Sadar ... ... 11 to 13 8 }
			Barasat ... ... 10 10 }
			Diamond Harbour ... ... 11 11 } per rupee.
			Basirhat ... ... 11 7 }
8	Nadia ,, 11, '94	1·85	Weather has been of light monsoon character. Harvesting of *aus* has commenced: prospects of *aman* good, of jute and indigo fair. Twenty-five cattle died of cow-pox in Sadar subdivision during the week. Price of common rice ranges from 11½ to 13½ seers per rupee.
	Kushtia ...	2·37	
	Meherpur ...	2·25	
	Chuadanga ...	0·85	
	Ranaghat ...	1·07	
9	Murshidabad ,, 11, '94	1·65	Weather—hot and at times cloudy with drizzling rain. Reaping of *bhadoi* paddy going on in some places. Jute plants thriving well. Indigo, mulberry, and sugarcane seem fair. *Aman* paddy much in want of rain. Fodder and water sufficient for cattle, and no cattle-disease reported. Common rice sells at 13 seers per rupee.
10	Jessore ,, 11, '94	0·70	Weather—hot and cloudy. Manufacture of jute and indigo and harvesting of *aus* going on. Transplantation of *aman* in progress. Prospects of lowland *aman* good. Indigo somewhat injured by heavy rain. Fodder and water sufficient. Prices of rice:—
	Magura ...	3·00	
	Narail ...	1·54	
	Jhenida ...	1·06	
	Bangaon ...	0·80	
			Srs. c.
			Sadar ... ... 12 0 }
			Jhenida ... ... 12 0 }
			Magura ... ... 12 0 } per rupee.
			Narail ... ... 10 0 }
			Bangaon ... ... 10 to 12 0 }
11	Khulna ,, 11, '94	1·14	Weather—cloudy and rainy. Prospects of standing crops generally good. Transplantation of *aman* paddy going on. More rain wanted in Satkhira subdivision. Rice sells at 10 to 12 seers per rupee. Fodder and water sufficient.
	Bagerhat ...	2·50	
	Satkhira ...	1·24	

BENGAL—*concld.*

	No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
Rajshahi Divn.	12	Rajshahi Aug. 11, '94	0·95	Weather—too dry and hot. The rain has not been equally distributed, and Naugaon and Sadar are suffering for want of it. It is very much wanted; but it is raining heavily at the time of report. *Aus* is being harvested in places. *Aman* is being transplanted slowly for want of moisture. Otherwise outlook is not bad. There is no cattle-disease reported. Fodder and water-supply ample. Rice selling from 10 to 13 seers per rupee.
		Nator ...	2·73	
		Naugaon ...	0·62	
	13	Dinajpur ,, 11, '94	2·54	Weather—hot and cloudy. There has been good rainfall in some parts of the district, but slight in others. More rain urgently required. Cultivation in some parts progressing. Foot-disease of cattle abating somewhat. Supply of fodder and drinking water sufficient. Rice selling from 9 to 11 seers per rupee.
		Thakurgaon ...	10·40	
	14	Jalpaiguri ,, 11, '94	11·92	Weather—very wet. Rain has done immense good to the crops. Prospects of both *haimanti* rice and jute have much improved. Outturn of *bhadoi* paddy will also be fair. Cattle-disease reported from Dumdim and Rajganj thanas.
	15	Darjeeling ,, 11, '94	7·18	Weather—cloudy, wet and cool throughout the district. *In the hills*:—*Bhutta*, potatoes, *kangni* and *shama* being harvested. *Aghani dhan* and *marua* progressing favourably. *In the Terai*:—Transplanting of *aghani dhan* favoured by rain. Crops generally improved. Jute steeping commenced. Prices of coarse rice:— Srs. Hills ... ... 7 to 12 } per rupee. Terai ... ... 11 }
		Siliguri ...	17·10	
	16	Rangpur ,, 11, '94	5·58	Weather—cloudy with showers almost daily. The rain has done immense good. Transplantation of *aman* is now going on throughout the district. More rain is, however, wanted for transplantation and for steeping of jute. Harvesting of *aus* and jute continues. The insect-pests reported last week prove to be grasshoppers. They are now reported to have done little or no injury to the crops. Price of rice 8 to 11 seers per rupee. No cattle-disease reported this week.
		Nilphamari ...	5·98	
		Gaibanda ...	4·42	
		Kurigaon ...	1·99	
	17	Bogra ,, 11, '94	6·51	Weather—cloudy and rainy at times. Good rainfall all over the district, but still more rain wanted. *Aus* and jute being cut in places. Outturn of latter crop estimated at 14 annas. Transplantation of *aman* in full swing. Common rice selling at 10½ seers per rupee. Fodder and water-supply sufficient.
		Sherpur ...	6·05	
		Naukhila ...	2·44	
	18	Pabna ,, 11, '94	2·34	Weather—seasonable and cloudy. Prospects of crops good at Sadar, but not so at Sirajganj, where more rain and flood-water wanted. Common rice sells at 11 seers per rupee at Sadar and 10 seers at Sirajganj. Fodder and water-supply sufficient.
Dacca Divn.	19	Dacca ,, 11, '94	Not reported.	Weather—cloudy and rainy. Harvesting of jute and *aus* rice going on. Prospects of standing crops good. Rivers slightly rising. Fodder available. Common rice selling from 9 to 13 seers per rupee. No cattle-disease.
	20	Mymensingh ,, 11, '94	7·68	Weather—seasonable. Prospects of standing crops good. Common rice sells at 10 seers per rupee. No cattle-disease. Fodder and water available.
	21	Faridpur ,, 11, '94	4·82	Weather—cloudy and rainy. Harvesting of *aus* and jute still continues. Prospects of *aman* and sugarcane fair. Common rice sells at 11 seers per rupee at Sadar, Goalundo, and Madaripur. Cattle-disease reported from the Madaripur subdivision. No want of fodder.
		Goalundo ...	3·47	
		Madaripur ...	1·36	
	22	Backergunge ,, 11, '94	5·49	Weather—seasonable. State and prospects of crops good. Common rice sells from 9 to 13 seers per rupee. Fodder and water sufficient.
Chittagong Divn.	23	Tippera ,, 11, '94	5·53	Good rainfall. *Aus*, a bumper crop, is still being harvested, and jute, a very good crop, is being cut. Prospects of the standing crops are excellent. Price of rice has risen slightly. Sadar— Srs. c. Laksam and Chaudagram ... ... 16 0 } Moradnagar ... ... 13 0 } Brahmanbaria— Brahmanbaria ... ... 15 8 } per rupee. Kasba ... ... 12 0 } Chandpur— Matlab ... ... 13 8 } Hajiganj ... ... 13 5 }
	24	Noakhali ,, 11, '94	6·72	Weather—seasonable. State and prospects of crops good. *Aus* is being harvested. Transplantation of *aman* is in progress. No cattle-disease. Fodder and water sufficient. Prices of common rice:— Srs. Noakhali ... ... 10 } per rupee. Feuny ... ... 11 }
	25	Chittagong ,, 11, '94	5·22	Weather—warm and showery. *Aus* being harvested in places. Transplantation of *aman* has begun. Prospects fair. Prices stationary. Water and fodder sufficient. A slight outbreak of cattle-disease in the Sadar subdivision.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR.			
26	Patna, Aug. 11, '94	1·26	Weather—hot and cloudy. Prospects of autumn rice and Indian-corn very good. The latter is ripening in places. Rain still wanted for upland rice. Prices almost normal. Common rice selling at —
	Dinapore ...	0·76	
	Bihar ...	0·14	
	Barh ...	3·11	
			Srs.
			Sadar 14½
			Barh ... ... 12½ per rupee.
			Bihar 15
			Dinapore 14¼
27	Gaya, „ 11, '94	3·91	Weather—rainy and cloudy. Transplantation of paddy continues. *Bhadoi* crops doing fairly well. More rain urgently wanted in Nawada subdivision. Common rice sells at —
	Nawada ...	0·50	
	Aurangabad ...	9·33	
	Jahanabad ...	3·24	
			Srs.
			Sadar 13
			Aurangabad ... ... 15½ per rupee.
			Nawada 16
			Jahanabad 12½
			Fodder and water-supply sufficient.
28	Shahabad, „ 11, '94	4·71	Weather—cloudy with west wind and occasional heavy showers. *Bhadoi* crops not doing well in Buxar subdivision owing to excessive rain. Prospects fair in other subdivisions. Paddy transplantation going on. Sugarcane good.
	Buxar ...	5·16	
	Sasaram ...	3·99	
	Bhabua ...	2·18	
29	Saran, „ 11, '94	3·07	Weather—seasonable. Prospects of *bhadoi* crops good. Transplantation of paddy going on. Fodder and water plentiful. Prices of common rice: —
	Siwan ...	2·43	
	Gopalganj ...	4·42	
			Srs. c
			Chapra 11 8
			Siwan ... ... 13 0 per rupee.
			Gopalganj 12 6
30	Champaran, „ 11, '94	6·30	More or less rain daily. Transplantation of rice in progress. Prospects of *bhadoi* crops fair. Common rice selling at 12 and 12½ seers per rupee. Fodder and water sufficient.
31	Muzaffarpur, „ 11, '94	2·94	Weather—seasonable with occasional rainfall. Standing crops doing well. Transplantation of winter rice is being vigorously pushed on. Prospects favourable. Condition of cattle good. Fodder and water abundant. Common rice selling at 11 seers per rupee.
	Hajipur ...	3·52	
	Sitamarhi ...	2·04	
32	Darbhanga, .. 11, '94	4·08	Weather—cloudy and sultry at times. Heavy rain this morning (11th), apparently general. Prospects of *bhadoi* crops very good. Transplanting of rice in full swing everywhere. The Kamla is rising. Fodder for cattle sufficient. Common rice sells at 11 to 12 seers per rupee.
	Madhubani ...	8·55	
	Samastipur ...	2·40	
33	Monghyr, „ 11, '94	1·65	Weather—hot, generally cloudy and occasionally rainy. *Makai* and other standing crops doing well. Indian-corn fields are being reploughed. Transplantation of winter paddy vigorously continues. Indigo and sugarcane doing well. Fodder and water sufficient. Small-pox amongst cattle towards Chakai still prevailing. Prices of common rice :—
	Begusarai ...	1·12

		Inches.
The mean 10 A.M. pressure of the seven days		29·560
		°
The mean temperature of the seven days		83·6
The extreme variation of temperature		11·7
The maximum temperature		90·0
		%
The mean 10 A.M. relative humidity of the seven days		83
		Inches.
The total fall of rain from 5th to 11th August 1894		1·73

The daily mean temperatures are the crude means of maximum and minimum temperatures.

J. H. Gilliland,
For Meteorological Reporter to the Govt of India.

Meteorological Office, India,
The 13th August 1894.

Meteorological Report of the Province of

Meteorological Division.	Division.	District.	Representative stations.	Station Observations.												
				Air Pressure.					Wind.		Temperature.					
				Highest, 8 A.M., barometer reading.	Lowest, 8 A.M., barometer reading.	Mean, 8 A.M., reduced to 32°.	Mean reduced to sea-level and constant gravity, Lat. 45°.	Variation from normal mean.	Mean direction at 8 A.M.	Mean velocity in miles daily.	Highest of month.	Lowest of month.	Mean daily maximum temperature.	Mean daily minimum temperature.	Mean daily temperature.	Variation from normal mean.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF JULY 1894.

THE meteorology of July has not only been highly important, but it has also been rather extraordinary from the number and importance of the barometric depressions and cyclonic storms which have been formed. All of these storms have moved in a westerly or north-westerly direction. Four of these storms, and indeed all the severe storms were formed over the sea, or partly over the sea and partly over the land, whilst two feeble depressions were formed over the land area.

In the first week two feeble storms occurred: one passing from the north-west angle of the Bay, and the other being formed in the centre and north of the province, but these were of little importance. After this came three severe storms, each more severe than the last, and the path of each of which was to the north of the former path. These were practically formed over the Bay, and moved in paths varying from north-west to west. The first of the three was decidedly severe, and the two last very severe, the third doing a good deal of damage to the shipping at the head of the Bay. The sixth was a feeble storm, as judged by the depression of the barometer, but it was highly important in the amount of rainfall it gave, and particularly because it gave heavy rain to areas which had hitherto received very little rain in July.

With this succession of storms large amounts of rain have been brought up to the province, but the distribution of the rain has been singular. The general rainfall of the province has been about 20 per cent. in excess of the normal, but nevertheless some districts have not received much more than half or one-third the usual amounts for July. Thus in Kuch Bihar a *defect* of no less than 68 per cent. and in Rangpur a *defect* of 62 per cent. of the normal fall in July has been recorded, while on the other hand, in the same division of North Bengal, the district of Pabna has received an *excess* fall of 74 per cent. Again in Bihar the district of Darbhanga has received a fall 48 per cent. *less* than usual, and Muzaffarpur and Purnea have shown *defects* of about 40 per cent., while also in Bihar the district of Bhagalpur has received a fall 51 per cent. in *excess*, and Gaya an *excess* of 46 per cent. of the normal fall. Hence, though the monsoon rainfall has been good on the whole, it has been remarkable for its irregular distribution, and in this respect the present monsoon appears to be almost unique.

At the close of June a very feeble barometric depression had formed in the north of the Bay, and on the 30th, or the last day of the month, it had advanced into the north-west angle, and its centre was close to Balasore and a little to the east of it. With the advance of the small depression, monsoon winds were again beginning to blow freely over the province, and hence general rain was being received. On the 1st of July the depression had to a great extent advanced inland, though it remained extremely feeble, and the lowest pressure was reported at Calcutta, while there was also a badly defined cyclonic circulation of winds over South-West Bengal. Practically, however, on this day, the depression had ceased to exist. On the 2nd the lowest pressure was reported from Rampur-Boalia, and round this as a centre winds were again circulating feebly in a cyclonic form, but there was scarcely sufficient evidence to say that any barometric depression existed over this area on this day. On the 3rd, again, pressure was relatively low over the east of Bihar and part of North Bengal, and a moderate fall of pressure had occurred, while winds showed a tendency to circulate round a centre probably near Malda, so that a very feeble, but not very definite, barometric depression appears to have existed over the east of Bihar on this day. On the 4th the lowest pressures were reported at Patna and Arrah, where pressure was nearly a tenth of an inch in defect, and the feeble depression had apparently moved in a west-north-westerly direction, and hence pressure was falling in the western districts, while it was rising moderately to rapidly at the central and eastern stations. The circulation of winds accompanying the feeble depression was, however, by no means definite. On the 5th the feeble low pressure area had apparently passed away from the province, and pressure was rising briskly at all stations, though it was still in slight defect in the west and centre of the province. No true circulation of winds, however, was recorded on this day. On the 6th a further slow increase of pressure occurred, and pressure became in slight excess in all districts, while on the 7th pressure had again generally increased, though a fall was commencing at the western stations, but still pressure was in excess in practically all districts.

The first two feeble depressions of the month having thus passed away, they were followed by a third and much more vigorous storm, which was of considerable strength over the sea. It formed immediately after conditions had ceased to be disturbed after the Bihar depression.

Small cyclonic storm of July 8th to July 14th.—On the 8th, pressure was rising at the northern stations and falling over the southern half of the province, the fall increasing in amount towards the south-eastern districts, and being largest over the Bay. At the same time wind directions at a few of the south-eastern stations began to show indraught towards the sea area. It was hence evident that a barometric depression was forming in the east of the Bay. Over Bengal rain had fallen rather abundantly from the 7th to the 8th, the rainfall being particularly heavy in the west of the province. On the 9th the depression over the Bay was developing slowly, and pressure had fallen in all districts, but owing to the indraught towards the depression, the monsoon winds were being drawn away from Bengal,

and on the 9th the rainfall reported was light and local. On the 10th a further slow development of the depression in the Bay took place, and the small storm was probably nearly in the centre of the Bay and to the south-west of Akyab. Winds showed a strong indraught towards the small storm, and therefore again little rain was reported in Bengal on this day. It is probable also that on the 10th the small storm was beginning to move in a westerly direction, for on the morning of the 11th the centre had become much nearer to the South Orissa Coast, and was probably to the south-east of False Point and to the east of Puri. Hence on the 11th pressure was falling slowly to moderately in Orissa and in the south-western districts of Bengal, while it had risen briskly over the remainder of the province. The centre of the small storm crossed the Orissa coast to the south of False Point, and the central line passed probably almost immediately over Puri at about 2 A.M. of the 12th.

The following is a short description of the weather experienced at Puri during the small storm as given by the Collector of that district :—

"*The 11th July* 1894.—Weather was stormy with a strong gale of wind and rain at small intervals. The total amount of rainfall registered was 0·70 inch, of which 0·49 inch preceded the storm. The highest wind velocity was 38·2 miles an hour. Wind direction, north-north-east at first, was calm a little before the storm, then south-west and south-south-west. The state of sea during the storm was boisterous, but it subsided soon after the wind had ceased.

"This weather first began with a light shower of rain amounting to 0·23 inch between forty minutes after 1 and 4 P.M. on the 11th instant, wind blowing in puffs from north-north-east at a velocity of 26·5 miles an hour. The sky was completely overcast. Between 6 and 8 P.M. there was another shower of rain amounting to 0·26 inch, wind direction continuing steady (north-north-east), but the velocity fell from 26·5 to 14·5 miles an hour. The sky was now clearing towards east and south, while over the horizon to west extending to south-west looked heavily clouded and threatening. At 2 A.M. (12th, following day) the wind was calm. This lasted till 3·45 A.M., when there was a sudden burst or strong gale of wind from south-west accompanied with rain. The rain ceased after 15 minutes, giving 0·21 inch, but the wind increased and continued to blow up to 10 A.M. at a velocity of 38·2 miles an hour. Here the wind slowly shifted to south-south-west and the velocity fell, blowing at 19·3 miles and lower and lower till 10 P.M., when the weather looked settled. The lowest barometer was 29·544 inches (corrected probably about 29·35 inches). It was taken at 2 A.M. on the 12th."

It is hence clear from this description that the storm centre, which was accompanied by a decided calm, such as is usually experienced only in the cyclones of the transition periods, passed over Puri between 2 A.M. and 3-45 A.M. of the 12th of July. The storm having crossed the coast near Puri on the early morning of the 12th, moving in a westerly direction at 8 A.M. of that day it was some little distance to the south of Sambalpur. The storm was therefore moving rapidly in a westerly or west-north-westerly direction. It was not, however, a storm of great intensity, nor was the pressure at its centre very low, but it was accompanied by a most perfect cyclonic circulation of winds, which, particularly to the south of the storm, were decidedly strong. The storm having thus passed inland, conditions became rather more favourable for rainfall in Bengal, and on the morning of the 12th the majority of stations reported rain. The storm, however, continued to advance in an almost westerly direction at an extremely rapid rate, the average speed being about 25 miles an hour for the 24 hours from 8 A.M. of the 12th to 8 A.M. of the 13th, and on the latter date it was in Central India. On the 14th the small storm was entering Lower Sind, and on the 15th it had quite disappeared. The rapidity with which this storm therefore advanced across India is remarkable, as it covered the space between Orissa and Lower Sind in a little more than two days, or in certainly less than two days and a half, that is at the rate roughly of six hundred miles a day. By the strong indraught towards the rapidly retreating storm, the monsoon current was to a great extent deflected from Bengal, and hence much less rain was received than is usually the case after the passage of a storm through Orissa. On the 13th, also, in the rear of the storm, pressure had risen very rapidly over the whole of the west of the province, the increase equalling nearly a quarter of an inch in Orissa. On the other hand pressure had begun to fall moderately to rapidly in Burma, and there was a slight tendency for winds to set up a circulation along the Burma coast, and conditions were therefore again favourable for the commencement of another barometric depression over the east of the Bay.

At this period the fourth depression and cyclonic storm of the month formed. The storms in July also gradually increased in intensity during the month, for the fourth storm was a decidedly severe one, and much more severe than the storm which crossed over Puri on the 12th. It is also noticeable that the path of the fourth storm was more to the north than the third, and crossed the coast over Balasore to the north of Orissa.

Severe cyclonic storm of July 14th to July 23rd.—On the 14th, pressure continued to fall rapidly at the eastern stations and in the east of the Bay, while a smaller fall was reported over the remainder of the province, though pressure was still in considerable excess generally. Winds at the eastern stations, however, showed very distinct indraught towards the Bay, indicating the continued existence and probable slight intensification of the depression over that area. With the formation of this second storm, and by the indraught towards it, again the monsoon current blowing over Bengal began to fall off in force, and hence conditions were not very favourable for rainfall. On the 15th, pressure had fallen over the

whole province, the fall being largest in the north of the Bay and at the eastern stations Winds also showed a very decided cyclonic circulation, which extended over the whole of the north of the Bay and the greater part of Bengal. The centre of this circulation was probably to the west of the centre of the Bay in the latitude of Puri. On the 16th pressure was falling rapidly in Orissa, particularly at False Point, which reported a fall exceeding a tenth of an inch, while it was falling slowly in the west of the province and rising at the eastern stations. The small storm had apparently advanced in a north-north-westerly direction, and was at 8 A.M. of the 16th some little distance to the south-east of False Point, while it was also probably intensifying to a considerable extent. On the 17th the storm had advanced again in a north-north-westerly direction, and was within the north-west angle of the Bay, the centre being a short distance only to the south-east of Balasore. The storm had increased rapidly in intensity, and there had been a fall of pressure at Balasore of more than a fifth of an inch, while a decidedly rapid fall had occurred over the whole of the south-western districts of Bengal. A very strong cyclonic circulation of winds accompanied the storm, and it extended over the whole of Bengal and the northern half of the Bay. The centre of the small cyclonic storm then crossed the coast to the south of Balasore soon after noon of the 17th, and the exceedingly low pressure of 29·169 inches was recorded at that station at 1 P.M. This pressure is about a third of an inch below the normal of the day. Probably, also, as the centre did not actually pass over Balasore, at the actual centre of the storm a pressure of only about 29 inches existed. The pressure recorded at Balasore even is an unusually low pressure for a cyclonic storm of the rains. The storm gave very strong winds and stormy and very squally weather over a large part of the Bay, and particularly in the north-west angle, and from Balasore it is reported that during the early part of the storm at about 2 A.M. of the 17th instant, that is about 12 hours before the storm centre reached the coast, the flag-staff with the storm signals hoisted on it was blown down, and hence the signals could no longer be hoisted there.

Either immediately before crossing the coast, or as the storm advanced inland, it began to change its line of advance, and instead of moving in a north-north-westerly direction it advanced almost due west. Hence at 8 A.M. on the 18th the centre of the storm was a little to the south-east of Sambalpur in the Central Provinces, having thus advanced about 200 miles since the previous day in almost a due westerly direction. On the 19th the centre of the storm was to the south-east of Seoni, or about 240 miles to the west of its position on the 18th, while on the 20th the centre was near Pachmarhi, and on this day it had advanced in a west-by-north direction through about 120 miles. On the 21st, the centre of the storm was a little to the north-west of Indore, and had thus advanced about 200 miles in a west-north-westerly direction. On the 22nd the storm had advanced in a north-westerly direction and its centre was near Mount Abu. On the 23rd it had advanced into Lower Sind, and on the 23rd, though a depression was still indicated over that area, it was very feeble, and on the 24th the depression had entirely disappeared. Thus the storm which first formed a little to the west of the centre of the Bay about the 14th instant continued to exist quite up to the 23rd or for ten days, during which period it also advanced in directions varying in different parts of its course from north-north-westerly to westerly over a path probably seventeen or eighteen hundred miles long, giving heavy weather and abundant rain practically throughout its existence. It was therefore a storm of exceptional nature.

As the storm approached the western side of the Peninsula it created a very strong indraught of monsoon winds from the Arabian Sea towards it. It hence caused very heavy weather in the western districts of India, and probably also in the Arabian Sea, while it gave exceptionally heavy rainfall over Western and North-Western India and caused most disastrous floods in several places.

The storm therefore was a very important one, as it gave heavy weather from about the 14th or 15th, up till certainly the 22nd, in the Bay of Bengal and Arabian Sea and over the head of the Peninsula as well. During the passage of the storm inland through the north of Orissa, in addition to the stormy weather with very strong winds and the very low pressures which were recorded, some very heavy falls of rain were reported. Thus from 8 A.M. of the 16th to the 18th Chandbali received 12·3 inches of rain, and Bhadrak also in the Balasore district 7·7 inches. A heavy wave of monsoon winds advanced in the rear of the storm, but owing to the westerly direction taken by it, the monsoon current was mainly deflected towards the Central Provinces, and therefore away from Bengal. Hence the monsoon current affecting Bengal during the passage of the storm across the Peninsula was again rather feeble, except in the south-western districts and Orissa, which were more or less affected by the storm. The rainfall for this period was therefore in very large defect in North and East Bengal and Bihar; the defect was much smaller in South-West Bengal and Chota Nagpur, while on the other hand the fall in Orissa was nearly twice as large as usual.

A fifth barometric depression and cyclonic storm was then formed, which gave very severe weather at the head of the Bay, and indeed caused a considerable amount of damage to the shipping at the Sandheads. The fifth storm passed further to the north than the fourth storm had done, in the same way that the fourth storm had passed further north than the third. It would also appear that the severity of the fifth storm was greater than that of the fourth, and hence the storms in question formed a kind of series of increasing intensity.

Severe cyclonic storm of July 23rd to July 28th.—While the fourth storm was still in existence conditions were again becoming disturbed in the Bay. On the 22nd pressure was falling

at all except a few of the south-western stations, the fall being largest in the north-east angle of the Bay. It is probable that even on this day a small storm was forming, as the weather at Akyab on the 22nd was extremely suspicious with a falling barometer during the day, while to the south very strong winds and very squally weather were reported from Diamond Island. On the 23rd the observations indicated that a feeble storm existed partly over the head of the Bay and partly over the Sunderbans with a centre to the south of Barisal, where pressure was 0·13 inch in defect. It is uncertain whether this storm was the continuation of the disturbance indicated in the north-east angle of the Bay on the 22nd, but if it was, the disturbance must have moved in a north-westerly direction during the 24 hours from the 22nd to the 23rd. During the 23rd the storm commenced to move in a westerly direction, and up to 4 P.M. of that date it had not intensified to any extent, but remained a feeble disturbance. From that time, however, it commenced to deepen and intensify rapidly, and at 8 A.M. of the 24th it was a deep and rather severe storm, the centre being about 30 to 40 miles to the south-east of Calcutta, where a pressure of only 29·203″ was recorded or 0·318″ below the normal. With the rapid deepening of the storm the cyclonic circulation of winds became much stronger and extended over the whole of Bengal. The main force of the winds was to the south and south-east of the storm, and a severe gale of wind blew at Saugor Island and the Sandheads, commencing from about midnight on the 23rd, and for several hours the wind velocity at Saugor Island averaged more than 60 miles an hour. At noon of the 24th the centre of the storm was about 25 or 30 miles to the south-south-west of Calcutta, the centre having passed apparently close to Diamond Harbour, and at this time the direction of its movement must have been a little to the north of west. Its rate of advance then became very slow for some hours, and up to 10 P.M. the storm had made little further advance, and its centre was still to the south-west of Calcutta and south-east of Midnapore. This retardation appears to have been due to an alteration in the direction of its movement which was taking place, for it is always the case that storms move very slowly while recurving. After 10 P.M. it moved almost in a north-westerly direction, and at 8 A.M. on the 25th the centre was to the south of Bankura and nearer to that station than to Midnapore. The pressure at Bankura on the 25th at 8 A.M. was 29·274″ or 0·211″ in defect, and it is probable the storm was already commencing to fill up slightly, though it was still accompanied by strong cyclonic winds. On the 26th at 8 A.M., the storm was entering Baghelkhand, and had hence moved across Chota Nagpur during the 24 hours at an average rate of about 12 miles an hour in a west-north-westerly direction. The depression at the centre of the storm was much smaller than on the previous day, and probably did not exceed a tenth of an inch, but it was still accompanied by a fairly strong cyclonic circulation of winds. On the 27th the storm had marched nearly westwards and the centre was close to Sutna, and the storm was a shallow depression only, while on the 28th it had almost completely filled up.

During the passage of the storm, in addition to the very low pressures recorded and the very strong cyclonic circulation of winds, which gave very stormy weather with very rough sea at the head of the Bay, and rather squally or somewhat stormy weather over a large part of Bengal, the storm also gave heavy rainfall over the south-western part of the province, the falls being exceedingly heavy near the path of the centre. Thus on the morning of the 24th Contai, in the Midnapore district, reported 15·29 inches of rain, Dantoon, also in the Midnapore district, 10·31 inches, Diamond Harbour 9·90 inches, and Tamluk, Ghatal and Saugor Island each more than 7 inches. On the 25th Mohanea, Shahabad district, reported 6·65 inches, and Aurangabad, Kendrapara, Jajpur, Akhyapada, Chandbali, Bhadrak and Balasore from four to six inches, and so on.

In the rear of the storm also a heavy wave of monsoon winds flowed over the province, but it was deflected mainly over the western and south-western districts, and the remainder of the province received comparatively little rain. On July 29th, however, a change again occurred, pressure fell moderately to briskly over the whole province and became in moderate defect, while at the same time westerly winds apparently forming part of the Bombay branch of the monsoon current began to set in over the west of the province, and to drive back the south-easterly and easterly monsoon winds coming from the Bay of Bengal. As is usually the case when such interaction occurs, very heavy rain began to fall in the western districts of Bengal and in Bihar, and on the 29th many of the stations in this district reported heavy rain, Bettiah receiving 8·50 inches, Buxar 6·14 inches, Siwan 5·17 inches, and many other stations rather heavy falls.

These conditions with winds being of more or less opposite direction, with the accompanying very heavy rainfall, again gave rise to a barometric depression, but which on this occasion was of a feeble nature.

Feeble barometric depression of July 30th to the 1st August.—On the 30th pressure had fallen over the eastern half of the province, the fall being largest at Dinajpur, while it had risen over the west and south-west of the province, and a distinct but feeble barometric depression had formed with a centre near Dinajpur, round which a very distinct circulation of winds appeared. Hence conditions had become particularly favourable for rainfall over practically the whole province, and falls exceeding five inches were reported at Atia, Fenny, Harishpur, Cox's Bazar, and Siwan, while very numerous stations reported amounts of more than three inches. On the 31st the feeble depression had moved in a westerly direction, and was lying along the foot of the hills from about Purnea westwards, and on the 1st of August it had almost disappeared, or had become merged into the monsoon trough of low pressure which at this time was lying almost along the foot of the hills.

This last depression, though meteorologically speaking a feeble one, was of great practical importance, as it gave the first general and heavy rainfall which had been received during the month in certain parts of Bihar and North Bengal, and which were very badly in want of rain, and particularly in such districts as Darbhanga, Muzaffarpur, Purnea, Jalpaiguri Rajshahi, Rangpur, Dinajpur, &c.

Pressure.—During the first week of the month pressure was usually below the normal, the defects ranging from 0·015″ to 0·035″, and being usually largest at the central and south-western stations. In the second week pressure was unusually high, and was in excess by a tenth of an inch, but owing to the passage of the small cyclonic storm through the south of Orissa, the excess over that area was comparatively small. In the third week the distribution of pressure was governed by the storm which passed near Balasore, and while the mean pressure in Orissa and at the neighbouring stations in Bengal showed a decided defect, over the remainder of the province, decided excess pressures were registered. In the fourth week the mean pressure varied from an excess of 0·01″ to 0·02″ at the extreme northern stations to a defect of 0·08″ at Calcutta and defects of 0·05″ and 0·06″ at Saugor Island, Jessore, Midnapore, Cuttack, &c., and hence again the pressure distribution was governed by the storm which had passed through South Bengal. The mean pressure for the whole month has therefore shown very slight defects at the extreme southern stations in South Bengal and also in Orissa. while slight excess pressures have been registered elsewhere, the excess equalling about 0·02″ to 0·03″ at the extreme northern stations.

Temperature.—The mean temperatures for the month have to a great extent followed the variations in the heaviness of the rainfall, and hence the whole of the north of the province has shown a mean temperature of about a degree in excess of the normal. The remainder of the province has registered slightly defective temperatures, the defects increasing towards the south-western districts, and being largest at Cuttack, where a defect of 1·6° is registered.

Rainfall.—The distribution of the rainfall throughout the month and its variation in different districts has already been described in detail in the general summary. The most noticeable feature has been the partial, and in some cases almost entire failure of the mosoon rain to reach certain districts in the north of the province in Bihar and North Bengal. This failure continued almost until the formation of the sixth depression in the last few days of the month, but fortunately this depression gave heavy and much needed rain to the districts which had been previously almost rainless.

The actual rainfall recorded in the different divisions has varied from about nineteen inches in East Bengal, Orissa and Chota Nagpur, and fourteen inches in South-West Bengal and Bihar, to only eleven inches in North Bengal. Slight to moderate excess general falls have been therefore recorded in all districts except North Bengal.

The following table gives a comparison of the falls in the various divisions during the month of July with the normal fall, the actual being given as a percentage of the normal fall. The table also shows the actual falls for each of the previous months of the year expressed in the same way, and the last column of the table shows the total of the falls of the past seven months of the year in each division expressed as a percentage of the normal fall. It will be seen that the general fall in the province in July has been 20 per cent. in excess of the normal, while in North Bengal there has been a defect of 20 per cent. Also that for the year up to the end of July the general rainfall of the province has equalled 103 per cent. of the normal, though decided defects have been registered in North Bengal:—

Meteorological Divisions.	January.	February.	March.	April.	May.	June.	July.	Actual rainfall of first seven months of 1894 expressed as a percentage of the normal fall for the period.
South-West Bengal ...	0	55	42	97	58	104	121	96
North Bengal ...	0	64	16	177	83	77	80	82
East Bengal ...	0	87	164	79	70	95	118	98
Bihar ...	3	163	24	98	29	121	108	100
Orissa ...	30	19	27	128	20	137	154	119
Chota Nagpur ...	3	110	4	144	31	149	138	123

As indicated previously, the distribution of rainfall during July has been extremely irregular. The falls indeed have varied from 57·57 inches in parts of South-East Bengal as represented by the station Cox's Bazar and over 40 inches in parts of North Bengal as represented by a fall of 40·86 inches at Buxa in the Darjeeling district, to a fall of only 3·57 inches at Shiuhar in the Muzaffarpur district, and to falls of only two inches at Sunderganj in the Rangpur district and at Dinhatta in the Kuch Bihar district, and to falls of about four inches at Rangpur itself and Peerganj also in the Rangpur district. Thus at almost neighbouring stations the falls have varied to an enormous extent.

Compared with the normal amounts for July, the actual falls also exhibit most startling discrepancies. The whole of the north of the province, north of a line from about Netrakona

to the south of the Champaran district, has received a defective fall, the defect usually exceeding five inches, and at such stations as Siliguri, Kuch Bihar, and Mathabhanga exceeding fifteen inches, while the southern parts of the province have received excess falls exceeding 5 and 10 inches over a large area and ranging up to excess falls of more than fifteen inches at Cox's Bazar, Chandbali and Contai. As instances of the extraordinary irregularity of the rainfall in July at neighbouring stations, it may be mentioned that in the Saran district, while Siwan received an excess fall of more than nine inches, Gopalganj, only a few miles to the north of it, received a defective fall of three inches; in Champaran, Bettiah received an excess full of three inches and Motihari a defective fall of four inches; and in the Bhagalpur district Banka received an excess fall of thirteen inches and Bhagalpur itself an excess of seven inches, while Supaul received a defective fall of five inches. Hence it will be seen that the fall has been exceedingly irregular even at neighbouring stations, and it is therefore impossible to give any very general and correct review of the rainfall.

The following table gives full data for the comparison of the actual and normal rainfall of the month of July in all districts of the province. The figures are derived from the average and actual rainfall of the rain-recording stations in each district, due allowance being made for the area which each station represents. This gives a more accurate average than the arithmetical means given in the weekly and monthly meteorological tables. The first column gives the normal or average district rainfall as determined from the rainfall observations of the past fifteen years. The second column gives the actual district rainfall as determined from the weighted actual rainfalls of the month at the reporting stations in each district. The third column expresses the ratio of the actual district rainfall of the past month to the normal rainfall as a percentage; and the fourth column gives the same information in a slightly different form, expressing as a percentage how much the district rainfall varied in excess or in defect from the normal rainfall:—

Percentage Table for July 1894.

Division.	District.	Normal district rainfall for July.	Actual district rainfall for July.	Percentage of actual to normal rainfall.	Percentage excess (+), defect (—).

	Inches.
The total fall of rain from 5th to 11th August 1894	0·72
The average fall of the corresponding period for 24 years, Surveyor-General's Office	2·27
The total fall from 1st January to 11th August 1894	31·38
The average fall of the corresponding period for 24 years, Surveyor-General's Office	39·03

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers t thunder, ▵ dew.

* Mean for 6 days.

Explanation.—*Summary*—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the
The *humidity* of the atmosphere is expressed at percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. Th
mean are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional stations for the period in questio
stations in the district sending in returns divided by the number of stations. A rainy day is one of which at least a tenth of an inch fell.

e week ending Saturday, the 11th of August 1894.

Mean 8 A.M. temperature.	Average humidity at 8 A.M.	Average cloud amount at 8 A.M.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. OF WEEK. Mean for district.	Normal mean.	Average number of rainy days.	Normal number of rainy days.	RAINFALL. Since 1st of month. Mean for district.	Normal mean.	Variation.	Since 16th May 1894. Mean for district.	Normal mean.	Variation.	District.

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received the corresponding space is left blank. If any of the returns are missing the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 7th August* 1894.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 11TH OF AUGUST 1894.

At the close of the previous week the monsoon current blowing over the province was fairly strong, as a low pressure area, which had formed in Bengal, had advanced along the foot of the hills in the North-Western Provinces, and the monsoon winds were being drawn into the feeble depression which still remained. On the 5th of August, or the first day of the week under review, pressure had fallen briskly over the province, and had become in defect by amounts ranging up to a tenth of an inch at the western stations in Bihar. On the 6th instant pressure rose slowly except at the extreme southern stations, and became decidedly low over the centre and north of the Bay and over Orissa, while winds round the north-west angle of the Bay showed a very distinct indraught towards the sea area. It was thus clear a feeble depression had formed off the Orissa Coast on the 6th. On the 7th pressure had again fallen slowly in the south of Orissa, but had risen elsewhere, and the feeble depression which had formed in the Bay on the 6th had become more definite, and was lying off the South Orissa Coast with a centre to the south-east of Puri. It was still a feeble depression, and had not intensified since the 6th. It passed inland during the afternoon of the 7th, the centre crossing the coast near Puri, and at 8 A.M. of the 8th the centre was a little to the south of Sambalpur and had therefore moved in a west-north-westerly direction. It was still a very shallow depression, but it was of large extent and affected a large part of North-Eastern and Northern India, and a fairly heavy wave of monsoon winds advanced over Bengal in connection with it. On the 9th the feeble depression had again advanced in a west-north-westerly direction in the Central Provinces, but it had become very feeble, and had practically ceased to exist. On the 9th and 10th, however, pressure fell rather briskly over the greater part of Bengal and Assam, and on the 10th it was in defect by from 0·06″ to 0·08″. This again caused an increase in the strength of the monsoon winds blowing from the Bay over Bengal, and at this time very strong monsoon winds were reported. On the 11th an inrush of westerly and north-westerly winds commenced in the west of the province, partially driving back the strong southerly and south-easterly winds which were flowing in over Bengal from the Bay. By the interaction thus produced, heavy rain was precipitated over the western districts. Pressure also began to fall briskly to rapidly, the fall equalling a tenth of an inch at some of the south-eastern stations, and by the opposing north-westerly and westerly winds with the south-easterly and easterly winds a distinct cyclonic circulation began to set up over the south and south-east of the province. Hence again a feeble whirl or barometric depression had formed over Bengal on this day, and conditions became very favourable for continued general and rather heavy rainfall.

Hence throughout the greater part of the week conditions have again been favourable for good general rain over the province, and falls decidedly in excess of the normal have been received in all districts except South-West Bengal and Orissa, where the falls have been rather smaller than usual.

Pressure.—The mean pressure for the week has been very considerably below the normal, the defect usually equalling from 0·04″ to 0·06″. These defects have been generally largest in Orissa owing to the passage of the depression, and at Cuttack and Balasore the defect equals 0·07″.

In Assam pressure has been in defect by an average amount of 0·05″.

Temperature.—The mean temperature has been generally very nearly normal, and for the whole province of Bengal the average mean temperature has been above the normal by about a tenth of a degree only. In Assam, on the other hand, a defect of 0·8° has been recorded.

Rainfall.—Average falls of between about four and four and a half inches have been received in North and East Bengal and in Chota Nagpur, and of nearly four inches in Bihar. Much smaller falls averaging about two inches only have been received in Orissa and South-West Bengal.

Expressed as percentages of the normal rainfall, the actual falls during the week have equalled the following amounts:—South-West Bengal 58 per cent., North Bengal 126 per cent., East Bengal 108 per cent., Bihar 127 per cent., Orissa 75 per cent., and Chota Nagpur 137 per cent. Taking each division to have an equal value in the calculation, the rainfall of Bengal for the week has equalled 105 per cent. of the normal fall.

In the case of the smaller districts the falls have been particularly heavy in Jalpaiguri, which has received 11·92 inches against the usual fall of 6·84 inches, in Rangpur with 4·84 inches against the normal 2·99 inches, in Bogra with 5·17 inches against the normal 2·69 inches, in Shahabad with 4·96 inches against the normal 2·69 inches, in Champaran with 6·37 inches against the normal 3·49 inches, in Darbhanga with 4·58 inches against the normal 2·63 inches, and in Bhagalpur with 6·33 inches against the normal 3·01 inches.

Very heavy falls have also occurred on various days at individual stations: thus on the 5th August Khurda (Puri district) received 10·87 inches, Debiganj 5·82 inches, Siliguri 6·47 inches, Thakurgaon (Dinajpur district) 9·99 inches. On the 6th Raniganj received 4·89 inches and Bogra 4·96 inches; on the 10th Arrah received 4·50 inches and Mirsarai (Chittagong district) 5 inches, and on the 11th Bhagatpur (Jalpaiguri district) 5·38 inches, Hazaribagh 3·82 inches, and Karagdeha 4·02 inches.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 11th of August 1894:—

Meteorological Divisions.	Temperature.						Rainfall.								
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1894.

REPORT ON THE STATE OF THE SALT MARKET FOR THE FIRST QUARTER OF 1894-95.

No. 662B., dated Calcutta, the 14th August 1894.

From—N. K. BOSE, ESQ., Offg. Secretary to the Board of Revenue, L.P.,
To—The Secretary to the Government of Bengal, Financial Department.

SALT.

E. V. WESTMACOTT, ESQ.

I AM directed to submit the following report on the state of the salt market for the first quarter of 1894-95, comprising the months of April, May and June 1894.

2. The quantity of salt of every description cleared during the quarter under report amounted to 27,18,594 maunds against 27,29,141* maunds in the previous quarter, and 24,33,242 maunds in the corresponding quarter of the previous year; and the net amount of duty levied thereon was Rs. 64,42,704 against Rs. 63,17,528* in the previous quarter, and Rs. 56,96,847 in the corresponding quarter of the previous year. In all cases fractions are omitted.

* Revised figures.

3. The quantity of excise salt removed from the golas in Orissa during the quarter under review and the quantity which remained in store at the close of the quarter are shown in table I :—

8. The quantity of salt despatched by the East Indian Railway to stations beyond Buxar during the quarter under review amounted to 1,873 maunds 30 seers as noted in the margin, against 4,122 maunds 10 seers in the previous quarter and 1,032 maunds 30 seers in the corresponding quarter of the previous year.

	Mds.	s.
April	749	20
May	749	20
June	374	30
Total	1,873	30

9. The quantity of saltpetre-salt removed from the refineries on payment of duty amounted to 8,258 maunds against 10,648 maunds in the previous quarter, and 9,349 maunds in the corresponding quarter of the previous year.

10. The shipments of Liverpool salt for the port of Calcutta according to published market reports were as follows:—

	Tons.
April	46,830
May	28,260
June	42,300

It is reported that 24,285 tons of Hamburg salt were shipped for Calcutta during the quarter under review.

11. Table V shows the average wholesale price per 100 maunds of Liverpool and other descriptions of salt during each fortnight of the quarter:—

	Bagerhat ...	4·23	
	Satkhira ...	3·17	

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concld.*			
RAJSHAHI DIVN.			
12	Rajshahi Aug. 18, '94	4·00	Weather—very rainy and seasonable. The copious rain which has fallen has done immense good to the crops, which are now everywhere said to be flourishing. Water-supply and fodder ample. There is no cattle-disease. The price of rice varies from 10 to 13 seers per rupee.
	Nator ...	1·17	
	Naugaon ...	3·21	
13	Dinajpur „ 18, '94	1·23	Weather—hot and cloudy. There has been slight rainfall in the district. Scarcity of rain has injured *bhadoi* to some extent. More rain very urgently needed for the progress of *haimanti* cultivation. Foot-disease of cattle abating somewhat. Supply of fodder and drinking water sufficient. Rice selling from 9 to 12 seers per rupee.
	Thakurgaon ...	3·52	
14	Jalpaiguri „ 18, '94	2·57	Weather—oppressive. More rain wanted for the *haimanti* rice crop, the planting out of which is being proceeded with. The *bhadoi* crop is yielding fairly; an average 12-anna crop is expected. Jute is also yielding well. Cattle-disease is prevailing in many places.
15	Darjeeling „ 18, '94	2·42	Weather—cloudy and wet throughout the district; hot in the Terai. *In the hills:—Bhutta*, potatoes and *chota marua* being harvested. *Bhadoi dhan* coming to perfection. *Bara marua* and *aghani dhan* progressing favourably. *In the Terai:*—Transplanting of *aghani* paddy being carried on. More rain needed. *Bhadoi* doing well. Prices of coarse rice:—
	Siliguri ...	2·32	
			Srs.
			Hills ... ... 8 to 12 } per rupee.
			Terai ... ... 11 to 13 }
16	Rangpur „ 18, '94	0·79	Weather—cloudy with occasional light showers. Harvesting of *aus* nearly finished. Steeping of jute in progress. More rain urgently needed for jute steeping and for transplantation of *aman* which is retarded in certain areas. Outturn 10 annas *aus* and 14 annas jute expected. Price of rice 7½ to 11 seers per rupee.
	Nilphamari ...	3·58	
	Gaibanda ...	1·91	
	Kurigaon ...	0·64	
17	Bogra „ 18, '94	2·74	Weather—cloudy with showers at intervals. *Aus* and jute still being cut. Transplantation of *aman* briskly going on. More rain wanted. Rice selling at 10½ seers per rupee. Fodder and water sufficient.
	Sherpur ...	3·89	
	Naukhila ...	1·65	
18	Pabna „ 18, '94	1·77	Weather—hot and showery. Prospects of crops good in the Sadar subdivision. More rain is wanted in the Sirajganj subdivision. Common rice selling at 11 seers per rupee at Sadar and 10 seers at Sirajganj. Fodder and water-supply sufficient.
DACCA DIVN.			
19	Dacca „ 18, '94	0·88	Weather—cloudy and rainy. Harvesting of jute and *aus* rice going on. Prospects of standing crops good. Rivers rising, which will benefit *aman*. Fodder available. Common rice selling from 9 to 13 seers per rupee. No cattle-disease.
20	Mymensingh „ 18, '94	1·83	Weather—seasonable. Transplantation of *aman* paddy and harvesting of jute and *aus* are going on. Prospects of the crops are good. Common rice sells at 10½ seers per rupee. Fodder and water available. Condition of cattle good.
21	Faridpur „ 18, '94	2·22	Favourable rainfall. The frequent showers and sunshine have done much good to the crops. A good crop may be expected of *aman*, sugarcane and jute. Price of rice 11½ seers per rupee.
	Goalundo ...	1·75	
	Madaripur ...	6·97	
22	Backergunge „ 18, '94	3·50	Weather—seasonable. State and prospects of crops good. Common rice sells from 9 to 13 seers per rupee. Fodder and water sufficient.
CHITTAGONG DIVN.			
23	Tippera „ 18, '94	2·02	Rainfall heavy in the south, lighter towards the north. *Aus* and jute are very good crops. A few days' bright sunshine would be good for the *aus* which is being harvested. In the north of the district more rain is wanted for the *aman*. Price of rice almost stationary.
			Sadar— Srs. c.
			Laksham ... ... 15 0 }
			Chandagram ... ... 11 7 }
			Brahmanbaria—
			Nasirnagar ... ... 15 0 } per rupee.
			Kasba ... ... 12 0 }
			Chandpur—
			Chandpur ... ... 13 5 }
24	Noakhali „ 18, '94	9·48	Weather—seasonable. State and prospects of crops good. Harvesting of *aus* nearly completed. Transplantation of *aman* continues. No cattle-disease. Fodder and water plentiful. Common rice sells at—
			Srs.
			Noakhali ... ... 10 } per rupee.
			Feny ... ... 11 }
25	Chittagong „ 18, '94	6·60	Weather—seasonable. Harvesting of *aus* still continues; twelve-anna outturn expected. Ploughings for, and transplantation of, *aman* progressing vigorously. Prospects fair. Water and fodder sufficient. Cattle-disease reported from the Sadar subdivision. Prices steady.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR.			
26	**Patna** Aug. 18, '94	1·23	Weather—cloudy and hot. Prospects of rice and Indian-corn continue good. *Bhadoi* somewhat damaged on diara lands in the Barh subdivision owing to sudden rise of the Ganges and in the Bihar subdivision by excessive rain. Common rice sells at—
	Dinapore	0·99	
	Bihar	5·52	
	Barh	5·74	

	Srs.	
Sadar	14¾	per rupee.
Barh	12½	
Bihar	15	
Dinapore	11 to 13	

27	**Gaya** 18, '94	4·72	Weather—rainy and cloudy. Transplantation of paddy still going on. The rain of the week has been much beneficial to paddy, especially in the Nawada subdivision. *Bhadoi* damaged by heavy rainfall at Nawada. Common rice sells at—
	Aurangabad	5·61	
	Nawada	6·48	
	Jahanabad	6·38	

	Srs.	
Sadar	12 to 13	per rupee.
Jahanabad	12½	
Aurangabad	14	
Nawada	16	

Fodder and water-supply sufficient.

28	**Shahabad** 18, '94	2·60	Weather—cloudy with occasional heavy showers. East wind prevailing. Transplantation of paddy is in progress. The heavy rain at Sasaram is reported to have retarded transplantation and partly damaged the *bhadoi* crops, especially Indian-corn and *marua*. The rainfall has done immense good at Bhabua. The prospect of *bhadoi* crops at Buxar is improved by fair weather.
	Buxar	1·50	
	Sasaram	7·64	
	Bhabua	6·22	
29	**Saran** 18, '94	1·75	Weather—generally cloudy with occasional showers. Condition of crops very good. Rice plantation progressing. Manufacture of indigo in full swing. In the Gopalganj subdivision the *marua*, *sawan* and *tanguni* crops have been all reaped and given a 14-anna yield, and the reaping of the *makai* and *sathi* paddy crops has commenced. Fodder and water plentiful. Prices of common rice:—
	Siwan	2·96	
	Gopalganj	0·96	

	Srs. c.	
Chapra	11 0	per rupee.
Siwan	12 8	
Gopalganj	11 3	

30	**Champaran** 18, '94	1·72	Weather—cloudy with occasional showers. Transplantation of paddy going on. *Bhadoi* crops in fair condition. Common rice has fallen to 13 seers per rupee. Fodder and water sufficient. Some cases of foot-and-mouth disease in neighbourhood of Motihari.
31	**Muzaffarpur** 18, '94	0·88	Weather—cloudy with occasional slight falls of rain. Prospects continuing favourable. Transplantation still going on. *Bhadoi* crops coming into ears. No disease among cattle. Fodder and water abundant. Rice selling at 11 seers per rupee.
	Hajipur	2·3	
	Sitamarhi	Not reported.	
32	**Darbhanga** 18, '94	1·89	Weather—cloudy with occasional rainfall. Prospects of *bhadoi* continue favourable. Transplanting of rice crop going on, but more rain still wanted in places for completing it. Fodder for cattle sufficient. Common rice sells at 11 to 12 seers per rupee.
	Madhubani	2·20	
	Samastipur	1·89	
33	**Monghyr** „ 18, '94	2·88	Weather—first part of the week cloudy and rainy, latter part hot with easterly wind. Transplantation of winter paddy still continues. *Marua* and other standing crops doing well in Begusarai and Jamui, except in some flooded parts. In the Sadar subdivision *bhadoi* crops have suffered materially. Fodder and water sufficient. Indigo and sugarcane doing well. Prices of common rice:—
	Begusarai	6·10	
	Jamui	2·58	

	Srs.	
Monghyr	11¾	per rupee.
Begusarai	12	
Jamui	13¾	

34	**Bhagalpur** 18,	0·72	Weather—seasonable. Prospects of crops good. Transplanting of paddy recently finished. Fodder and water abundant. Price of common rice stationary.
	Banka	2·61	
	Madhipura	1·48	
	Supaul	2·33	
35	**Purnea** 18, '94	2·14	Weather—warm with occasional showers. *Bhadoi* being harvested. Jute being steeped. *Aghani* being transplanted. Fodder and water sufficient. No cattle-disease. Price of rice averages 14 seers per rupee.
	Kishanganj	1·46	
	Araria	4·15	

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops
	BIHAR—*concld.*		
Bhagalpur Divn.—*concld.* 36	Malda Aug. 18, '94	2·45	Weather—raining now and then. *Bhadoi* paddy ripening and being harvested in some places. An average outturn is expected. Transplanting of winter rice in progress. Ordinary rice sells at 11¼ to 14½ seers per rupee. No want of fodder.
	Chanchal ...	2·54	
	Shibganj ..	1·06	
	Gazole ...	3·05	
37	Sonthal Parganas ,, 18, '94	4·39	Daily clouds and rain. Almost too much rain for *makai*, but *dhan* doing very well.
	Deoghur ...	2·28	
	Godda ...	1·95	
	Jamtara ...	4·13	
	Pakour ..	3·03	
	Rajmahal ...	1·51	
	ORISSA.		
Orissa Divn. 38	Cuttack ,, 18, '94	2·47	Weather—unsettled. Except in flooded tracts prospects good. Transplanting and weeding in progress. In the flooded tracts the growing crops have been seriously damaged. Considerable areas are still under water. Replanting is in progress where feasible, and agricultural loans are being made where most needed. It is hoped that with favourable weather hereafter and no further floods much of the damage may be made good. Common rice sells at— Srs. c. Srs. c. Sadar ... ... 9 14 to 13 2; Jajpur ... ... 9 13 to 10 8; Kendrapara ... ... 10 8 to 13 0; Banki ... ... 13 12 } per rupee.
39	Balasore ,, 18, '94	0·51	Weather—hot, cloudy with slight showers. Except in the south-east of the district, no serious damage has been done to the crop by the floods. In Ankura Bhera and Bayang the crop was damaged 8 annas in parts by the floods, but the fair weather in the last fortnight has to some extent made up for the damage. The Subdivisional Officer of Bhadrak is at Chandbali making enquiries. Prices of coarse rice:— Srs. Balasore ... ... 13; Bhadrak ... ... 14 to 15 } per rupee.
40	Puri ,, 16, '94	1·94	Weather—cloudy with drizzling showers of rain. Puddling, transplanting and weeding of *sarad* still going on. *Beali* is in ear in places. State of miscellaneous crops good. Rice sells from 12 to 15¾ seers per rupee.
	Khurda ...	5·17	
	Banpur ...	1·35	
	CHOTA NAGPUR.		
	South-West Frontier Agency.		
Chota Nagpur Divn. 41	Hazaribagh Aug. 18, '94	2·57	Weather—seasonable. Daily rain. Transplanting of paddy still in progress, completed in places and approaching completion in others. All crops promise well, except Indian-corn, which has been injured by excessive rain. Fodder and water abundant. Common rice selling at 12 to 13 seers per rupee.
	Giridi ...	4·68	
42	Lohardaga ,, 18, '94	4·13	Weather—hot and cloudy. Transplantation of winter paddy about to be completed. Prospects of *bhadoi* crops continue good. Common rice selling at 14 seers per rupee. Fodder and water sufficient.
43	Palamau ,, 16, '94	4·04	Constant rain. *Makai* is being damaged by the persistent rainfall, which is, however, most beneficial to other crops. Transplantation of paddy is in full swing. Prospects of all paddy crops are excellent. Rice selling from 12 to 16 seers per rupee.
44	Manbhum ,, 18, '94	6·23	Weather—seasonable. Transplantation of paddy very nearly completed. Price of rice 11 to 14 seers per rupee.
45	Singhbhum ,, 18, '94	7·63	Heavy rain during the week. The *makai* crop has been damaged to some extent. Other crops are doing well. Rice sells from 10 to 15 seers per rupee.

* Mean for 6 days.

Explanation.—Summary—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the The *humidity* of the atmosphere is expressed at percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The mean are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional stations for the period in question stations in the district sending in returns divided by the number of stations. A rainy day is one of which at least a tenth of an inch fell.

the week ending Saturday, the 18th of August 1894.

Departure from normal mean.	Mean 8 A.M. temperature.	Average humidity at 8 A.M.	Average cloud amount at 8 A.M.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. Of week. Mean for district.	Normal mean.	Average number of rainy days.	Normal number of rainy days.	Rainfall. Since 1st of month. Mean for district.	Normal mean.	Variation.	Since 16th May 1894. Mean for district.	Normal mean.	Variation.	District.

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received the corresponding space is left blank. If any of the returns are wanting the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·10 inch of rain has fallen.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 18TH OF AUGUST 1894.

At the close of the previous week ordinary monsoon conditions prevailed in Bengal except that on the 11th, or the last day of the week, there was a slight tendency for a barometric depression to form over Bengal. On the 12th, or the first day of the week under review, pressure had fallen over the eastern half of the province and at some of the central and northern stations, while it was rising in the west of the province. Hence the barometric depression which had been forming on the previous day had become more prominent, and pressure was in defect by amounts ranging up to 0·17″ at Faridpur and 0·162″ at Barisal and Narayanganj. A distinct circulation of winds also set up round the low pressure area, and by the indraught towards the depression, winds became rather strong at the head of the Bay. General and rather heavy rain was also being received in connection with the depression. On the 13th the feeble depression had moved in a west-north-westerly direction into West Bengal, and the centre was a little to the north of Raniganj. It had not, however, intensified in any way and was still very feeble, though it was giving good general rain over the whole province. Hence on the 13th with the movement of the depression pressure had fallen at the western and south-western stations, while it was rising at the eastern, northern and central stations. It was also accompanied by an almost perfect cyclonic circulation of winds, though the wind force was light. On the 14th the depression had again moved away in a west-north-westerly direction, and the centre was probably near Hazaribagh, but it was a very extensive and shallow depression, and was giving moderate winds only with general and fairly heavy rain. On the 15th the barometric changes in Bengal were particularly small, and the very feeble depression had continued to drift very slowly westwards and covered Bagholkhand and part of Chota Nagpur, so that conditions in Bengal remained unchanged, and moderate general rain with a moderately strong monsoon prevailed. On the 16th pressure was rising slowly at all except a few of the eastern stations, and the feeble depression had moved slightly westwards, and was mainly over the North-Western Provinces with a centre, perhaps, to the south of Benares, so that it had practically little effect on the conditions in Bengal. A fairly strong monsoon, however, continued to blow over Bengal towards the depression, and rainfall continued general. On the 17th pressure continued to increase very slowly over the greater part of Bengal, and the feeble depression had again extended slightly in a westerly direction, but the general weather conditions in Bengal were quite unchanged. Finally, on the 18th, or the last day of the week, pressure had again risen moderately to rather briskly over Bengal, though it was falling in Assam, but notwithstanding the steadily increasing pressure, a defect usually ranging from 0·05″ to 0·08″ was still registered over the province. The feeble depression had again moved westwards, and the centre was near Nowgong, but it was unchanged in general character, and was a very shallow diffused depression extending over a large area and accompanied by a distinct cyclonic circulation of winds. As before, moderate monsoon winds were blowing over Bengal into the depression, and hence fairly general rain continued to be received.

Hence it will be seen that throughout the whole week a barometric depression has existed, and has moved slowly from South-East Bengal in a west-north-westerly and westerly direction to near Nowgong. The depression, however, has at no time developed in intensity, and has remained throughout as a feeble, diffused low pressure area with a moderate cyclonic circulation of winds. On the other hand, throughout its existence it has given fairly general and rather heavy rain. It is very unusual for a depression to exist for so long a period without any practical change in intensity, and hence the history of the depression has been peculiar.

Pressure.—Owing to the passage of the depression through the province, pressure has been rather largely below the normal. The defect has been smallest at the extreme eastern stations, which have not been affected by the depression, and at Sibsagar the defect has only equalled 0·059″. On the other hand, in the west of the province, where the stations have been affected for the longest time by the depression, defects exceeding a tenth of an inch are common, and at Hazaribagh the defect has equalled 0·124″.

Temperature.—Owing to the good general rainfall which has been received, the mean temperature has been in defect in practically all districts. The defects have been largest in Chota Nagpur, Orissa, and South-West Bengal, where they have equalled nearly a degree and-a-half, and for the whole of Bengal the defect in the mean temperature has averaged one degree.

In Assam a defect of only 0·3° has been registered.

Rainfall.—The heavy average fall of more than five inches has been received in Chota Nagpur during the week, which is nearly twice the usual amount. In South-West Bengal, East Bengal and Bihar, the falls have averaged between three and three-and-a-half inches, while in North Bengal and Orissa they have averaged between two and two-and-a-half inches. The falls in Bihar and South-West Bengal have been in moderate excess, while they have been in defect elsewhere.

Expressed as percentages of the normal rainfall, the actual falls during the week have equalled the following amounts:—South-West Bengal 112 per cent., North Bengal 64 per cent.,

East Bengal 84 per cent., Bihar 130 per cent., Orissa 89 per cent., and Chota Nagpur 191 per cent. Taking each division to have an equal value in the calculation, the rainfall of Bengal for the week has equalled 112 per cent. of the normal fall.

In the case of the smaller districts the falls have been decidedly heavy in Birbhum, Bankura, Shahabad, Monghyr, Manbhum, and Singhbhum, and on the other hand decidedly light falls have been reported in Howrah, Calcutta district, Darjeeling, Kuch Bihar, South Lushai Hills, and Bhagalpur.

Heavy falls exceeding seven inches during the week have been received at the following stations:—Hitampur (Birbhum district), Khatra (Bankura district), Gangajhalghati and Raipur (both in Bankura district), Garhbeta (Midnapore district), Gnatong, Noakhali, Chittagong, Bhabua, Sasaram, Mohanea, Khiri and Bassawan in the Shahabad district, Gobindpur (Manbhum district), and Chaibassa and Kalikapur in the Chaibassa district.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 18th of August 1894:—

Meteorological Divisions.	Temperature.						Rainfall.									
							Of week.			Rainy days.			Since 1st of month.		Since 16th May 1894.

The average fall of the corresponding period for 24 years, Surveyor-General's Office	43·66

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h, 10h., 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers.

In the weekly report from 1st to 7th July 1894 *read* 1·29 inches *for* 0·29 inch as the rain of the 4th July 1894.

METEOROLOGICAL OFFICE, GOVT. OF INDIA; J. H. GILLILAND,

Calcutta, the 20th August 1894. *For Meteorological Reporter to the Govt. of India.*

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled for the purpose of making Laws and Regulations under the provisions of the Indian Councils Acts, 1861 *and* 1892.

THE Council met at the Council Chamber on Saturday, the 25th August, 1894.

Present:

The HON'BLE SIR CHARLES ALFRED ELLIOTT, K.C.S.I., Lieutenant-Governor of Bengal, *presiding.*

The HON'BLE SIR CHARLES PAUL, K.C.I.E., *Advocate-General.*

The HON'BLE H. J. S. COTTON, C.S.I.

The HON'BLE SIR JOHN LAMBERT, K.C.I.E.

The HON'BLE MAULVI ABDUL JUBBAR KHAN BAHADUR.

The HON'BLE F. R. S. COLLIER.

The HON'BLE C. E. BUCKLAND.

The HON'BLE C. A. WILKINS.

The HON'BLE MAULVI SYED FAZL IMAM KHAN BAHADUR.

The HON'BLE SURENDRANATH BANERJEE.

The HON'BLE L. GHOSE.

The HON'BLE MAULVI SERAJUL ISLAM KHAN BAHADUR.

The HON'BLE W. C. BONNERJEE.

THE BENGAL POLICE.

The Hon'ble BABU SURENDRANATH BANERJEE asked—

Will the Government state the reasons why, under the Notification dated the 16th July, 1894, which appeared in the *Calcutta Gazette* of the 18th July last, announcing that an examination of candidates for recruiting the staff of the superior Police Officers in Bengal will be held in December next, it has been laid down by implication that Native Indian candidates will be excluded, and that only such European candidates as have been nominated by the Lieutenant-Governor will be permitted to present themselves for examination? Whether the Government is prepared to reconsider this part of the notification?

Will the Government state (1) the number of Assistant and District Superintendents of Police in the Bengal Police Force, (2) the number of native gentlemen who are Assistant and District Superintendents of Police, (3) the number of Assistant Superintendents who have been selected from among Inspectors in accordance with the recommendation of the Public Service Commission?

The Hon'ble MR. COTTON replied :—

"The result of a long discussion which followed on the Report of the Public Service Commission has been that the strength of the Police Department for Bengal and Assam has been fixed at 94 officers, of whom 2 are Deputy Inspectors-General of Police, 55 are District Superintendents, 29 are Assistants, and 8 Probationers. The average annual recruitment required to keep up this force is about $4\frac{1}{2}$. It has been decided that two officers should be appointed annually by competitive examination in England and two by competitive examination in India, these being officers of European parentage. The examination referred to in the Hon'ble Member's question is the second of these, or the Indian one. It has been decided to appoint for the present two Natives of India to the police in every three years, but it has not been thought desirable to appoint them by competitive examination, and they will, as a rule, be promoted by selection from among Inspectors in accordance with the recommendation of the Civil Service Commission.

"The number of Native District Superintendents now in the Department is two: the number of Native Assistant Superintendents is three. The number of Assistant Superintendents who have been selected from Inspectors is three, viz., Babu Ras Behary Biswas, on the 19th January, 1891; Maulvi Zinnat Hosain Khan; on the 23rd June, 1892, and Babu Girindro Chunder Mukherjea, on the 21st May, 1894."

GOVERNMENT AND HIGH EDUCATION.

The Hon'ble BABU SURENDRANATH BANERJEE asked—

Whether the attention of the Government has been drawn to the comments which have appeared in the newspapers on the Resolution of Government on the subject of Local Self-Government, and the evident sense of alarm in regard to the question of high education, which the Resolution has created? Is it the intention of the Government that local funds at the disposal of the District Boards should not be devoted to the support of education of a higher kind until full provision has been made for primary education? Is the Government aware that such an order, if given effect to, would mean the virtual closing of a large number of grant-in-aid schools, which impart secondary education?

Will the Government state the percentage of educational grant that used to be spent upon primary education by the Government before the creation of the local bodies? If the percentage varied from time to time, will the Government state the percentage for the five years preceding the establishment of the District Boards under the Local Self-Government Act?

The Hon'ble MR. COTTON replied:—

"The Hon'ble Member's question refers to a passage which occurs in the preamble to the Resolution of the 28th June, 1894, and which was itself a quotation from a previous order. The bearing of this passage must be ascertained from a consideration of the drift of the Resolution itself.

"The object of the Resolution was to point out that while the income of District Boards had increased considerably since 1888-89, their contributions to education had scarcely increased at all. The sum spent by Government on the educational establishments made over to District Boards was Rs. 10,09,657, or, including scholarships, which were afterwards transferred to them, Rs. 10,39,177; and this amount was placed at the disposal of the District Boards in addition to the Road Cess and other funds with which they dealt. In the year 1888-89 their expenditure on education was Rs. 10,30,809, and on primary education alone Rs. 6,84,547. In the year 1892-93 their outlay on education had risen only to Rs. 10,54,477, and that on primary teaching to Rs. 7,07,785. Meanwhile their total income had risen from Rs. 51,24,896 to Rs. 59,55,285. The Lieutenant-Governor urged upon the District Boards the importance of devoting a portion of their growing resources to education, and more particularly to primary instruction. No suggestion was made that primary schools should be fostered at the expense of secondary schools by diverting funds from the one class to the other. The importance of fostering all sorts of schools was insisted on, and it was urged that especial attention should be given to the spread of primary education. During the present year an additional sum of Rs. 31,000 has been placed at the disposal of the Director of Public Instruction from Provincial Revenues to be expended on primary teaching in the districts where that class of education is most backward.

"In the latter part of the Hon'ble Member's question he is understood to enquire what percentage the total expenditure on primary education bore to the total expenditure on education in the Province before the District Boards were created. The figures obtained from the information before Government are as follows:—The percentage was in 1882-83, 25·5; in 1883-84, 25·3; in 1884-85, 28; in 1885-86, 27·4; in 1886-87, 26·4. These figures, however, are believed to be somewhat lower than the true percentages, as some portions of the expenditure under general heads, such as Inspection, Buildings, &c., which are debitable to primary education, cannot be detached without detailed enquiry and calculation, which there has not been time to make."

THE MUHARRAM DISTURBANCES AT RAJSHAHI.

The Hon'ble BABU SURENDRANATH BANERJEE asked—

Has the attention of Government been called to the *muharram* disturbances at Rajshahi? Is it true, as reported in the newspapers, that the police fired upon the people without any orders from their superior officers, although no resistance had been offered by the Muhammadans when the *lathis* were being taken away from them by the police? Did the constables fire in the presence of their superior officers? If so, why did they not interfere with a view to stop the firing?

Whether any enquiry was held into the matter by the Magistrate and the Inspector-General of Railway Police, and will the Government lay on the table the reports, if any, of these officers? Will the Government state what steps it proposes to take to prevent the recurrence of such proceedings on the part of the police?

The Hon'ble MR. COTTON replied:—

"The attention of Government has been drawn to the disturbances referred to. Special enquiries have been made into them by the Inspector-General of Police, and also by the Commissioner of the Division, and the reports received from those officers, which have just been placed in the hands of the Lieutenant-Governor, are now under consideration. It has been shown that five police constables fired once each, three with blank cartridge and two with

buckshot, not with ball, as has been stated in some newspapers, without any orders to do so from their superior officers, and they have each of them been convicted under section 29 of Act V of 1861, and sentenced to simple imprisonment for one month and one day. They were rushed by the mob, and two of them having already received rough treatment from the rioters, they were panic-stricken and fired without orders.

"The reports received and the orders passed thereon will be made public in due course."

THE MEA CHAPRA CASE.

The Hon'ble BABU SURENDRANATH BANERJEE asked—

Has the attention of Government been called to a letter from its Muzaffarpur correspondent, which appeared in the *Bihar Herald* of the 14th July last?

Is it the case, as stated in the letter, that the raiyats of Shapur Buzurg, in the subdivision of Hajipur, having complained against some of the factory people employed in the Mea Chapra Indigo concern, the petition was referred by the Subdivisional Officer, Mr. Konstam, to the Manager of the Factory, whose servants were complained against, "for favour of enquiry and report?" Does the Government approve of such a proceeding, in which a person directly interested in the prosecution is allowed to have a voice in the decision of the case? Will the Government take steps to prevent its recurrence?

Whether it is the case that the Manager in replying to the communication of the Subdivisional Officer addressed him as "My dear Konstam?"

Whether it is true that the Magistrate, without passing any orders upon the complaint of the raiyats, proceeded with the case in which the factory people were the complainants, and convicted seven raiyats and sentenced them to one month's rigorous imprisonment and to a fine of Rs. 10 each?

Whether it is the case, as stated in the letter referred to above, that there was a complaint by the factory servants against some raiyats pending in the file of the Native Sub-Deputy, and that this case was transferred to the file of Mr. Morshed, the then Subdivisional Officer of Hajipur, the Manager having written to Mr. Morshed that the factory case was a true one, and that it should be withdrawn from the file of the Native Sub-Deputy to his own file?

Will the Government lay on the table a statement showing the number of cases instituted from April, 1893, to June, 1894, within the jurisdiction of the Subdivisional Magistrate of Hajipur (1) by the raiyats against people employed in the factories, (2) by the factory people against the raiyats; (*b*) the number of such cases tried by the Subdivisional Officer and the number of such cases tried by Native Deputy and Sub-Deputy Magistrates; (*c*) the result in each case; (*d*) the number of such cases, if any, transferred to the file of the Subdivisional Officer from the file of Deputy and Sub-Deputy Magistrates, together with the reasons for such transfer?

The Hon'ble MR. COTTON replied:—

"The Lieutenant-Governor understands that the case referred to in the Hon'ble Member's question has been brought before the High Court, and is still pending before that Court. In these circumstances, it would not be proper for Government to express any opinion in regard to it.

"The Lieutenant-Governor does not consider it necessary to obtain the information asked for in paragraph 5 of the Hon'ble Member's question. In the opinion of Government all cases of importance—and cases in which a factory is concerned generally come within this category—should be heard by the Subdivisional Officer himself, and should not be referred for trial to a Sub-Deputy."

TRAVELLING ALLOWANCE FOR POLICE OFFICERS.

The Hon'ble BABU SURENDRANATH BANERJEE asked—

Will the Government state the system that is followed in giving travelling allowance to Inspectors belonging to the Calcutta Police Force? Is it true

that European Inspectors get travelling allowance when they are transferred from one thana to another, but that the same indulgence is not shown to the Indian Inspectors of Police?

The Hon'ble SIR JOHN LAMBERT replied:—

"The allowance granted to European Inspectors and Constables of the Calcutta Police Force to cover the actual cost of moving their luggage on transfer from one police-station to another is regulated by clause (*l*), article 1189 of the Civil Service Regulations, which runs as follows:—

'(*l*) European Inspectors and Constables of the Bombay City Police and of the Calcutta Town and Suburban Police may charge the actual cost of moving their luggage on transfer from one station to another in the city, provided that the charge shall not exceed Rs. 8 in the case of an Inspector and Rs. 5 in the case of a Constable.'

"It will be seen that this rule does not apply to the case of Native Indian Inspectors."

MUHAMMADANS IN GOVERNMENT EMPLOY.

The Hon'ble MAULVI SERAJUL ISLAM KHAN BAHADUR asked—

Will the Government be pleased to prepare tables showing (*a*) the population of Muhammadans and the number of non-gazetted appointments with salaries ranging from Rs. 15 per month and upwards held by them in the Bengal, Bihar and Orissa districts, (*b*) the population of Hindus and the number of non-gazetted appointments with the same salaries as in (*a*) held by them in those districts, (*c*) the number of non-gazetted Hindu and Muhammadan employés on the same salaries as in (*a*) in—

I.—The Bengal Secretariat.
II.—The Board of Revenue.
III.—The Office of the Inspector-General of Police.
IV.—The Postmaster-General's Department.
V.—The Excise and Customs Department.
VI.—The Divisional Commissioner's Office.
VII.—The Court of Small Causes, Calcutta.
VIII.—The Office of the Inspector-General of Registration.

Will the Government also prepare lists showing (*a*) the total number of appointments in the Subordinate Executive Service and the number of appointments held by the Hindus and the Muhammadans respectively, (*b*) the total number of appointments in the Subordinate Judicial Service, and the number of appointments held by the Hindus and the Muhammadans respectively?

Regard being had to the disproportion of Muhammadans to that of Hindus in Government service, will the Lieutenant-Governor be pleased to pass such orders as will secure for them a certain number of appointments both in the districts and the departments mentioned in question I (*c*), and thus satisfy their claims to share Government appointments with the Hindus?

The Hon'ble MR. COTTON replied:—

"The Government are not prepared to undertake the collection of the statistics called for by the Hon'ble Member or to institute any elaborate comparison between the total number of Muhammadans in each district and the number employed in service under Government. To do so would serve no useful purpose. It is well known that the number of Muhammadans in Government service is very small in comparison with the total number of the Muhammadan population in these provinces, and the reasons for this disproportion are also well known to the Hon'ble Member and to the public. It is the policy of Government to encourage the employment of Muhammadans consistently with the welfare of the public service, and the Lieutenant-Governor has lost no opportunity of giving effect to this policy whenever properly-qualified Muhammadan candidates are available. The number of such candidates, the Lieutenant-Governor is glad to be able to say, is steadily increasing. Certain statistics are furnished every year in the Annual Administration Report

of Commissioners of Divisions regarding the number of Muhammadans employed in Government service in every district, and these statistics for the past year will be supplied to the Hon'ble Member, but it is not considered necessary to lay them before the Council."

BENGAL MUNICIPAL ACT, 1894, AMENDMENT BILL.

The HON'BLE MR. COTTON moved for leave to introduce a Bill to amend Bengal Act IV of 1894. He said:—

"In section 37 of Act IV of 1894, certain words are inserted in amendment of section 89 of Bengal Act III of 1884, which enable buildings, the property of Railway Administrations and of local authorities, to be assessed in the same manner as buildings the property of the Government. This provision was introduced in the Bill by the Select Committee, and was passed by this Council without comment. It escaped notice that by the Indian Railways Act of 1890, an Act passed by the Imperial Council, a provision is made in section 135, which exclusively regulates by rules contained in that section the levy of taxes in respect of railways and from Railway Administrations in aid of the funds of local authorities. In these circumstances it is undesirable for this Council to make any reference in any law passed by it to the assessment of railway buildings; and in order that there may be no possible conflict between any legislation passed by this Council and by the Council of the Government of India, it has been considered necessary to introduce this amending Bill, which eliminates from section 37 of Bengal Act IV of 1894, any reference to buildings belonging to Railway Administrations."

The Motion was put and agreed to.

The Hon'ble MR. COTTON said:—"This measure, Sir, being of a very technical character, it appears unnecessary to postpone its consideration to a future meeting of the Council or to refer it to a Select Committee, and with your permission, Sir, I will ask you to suspend the Rules of Business and to allow me to introduce the Bill and to move that it be read in Council."

The Hon'ble THE PRESIDENT having declared the Rules of Business suspended—

The Hon'ble MR. COTTON introduced the Bill, and moved that it be read in Council.

The Motion was put and agreed to.

The Bill was read accordingly.

The Hon'ble MR. COTTON said:—"I have nothing to add regarding the little Bill I have in my hands. It speaks for itself, and calls for no further explanation. I apprehend that the Council will be willing to accept without objection or comment the motion that the clauses of the Bill be taken into consideration by the Council."

The Motion was put and agreed to.

The Hon'ble MR. COTTON also moved that the Bill be passed.

The Motion was put and agreed to.

The Council adjourned *sine die*.

CALCUTTA;
The 28th August, 1894.

GORDON LEITH,
Assistant Secretary to the Govt. of Bengal,
Legislative Department.

RESOLUTION ON THE ANNUAL GENERAL ADMINISTRATION REPORT OF THE CHITTAGONG DIVISION FOR THE YEAR 1893-94.

GENERAL DEPARTMENT—MISCELLANEOUS.

Calcutta, the 27th August 1894.

RESOLUTION No. 2901.

READ—

The Annual General Administration Report of the Chittagong Division for the year 1893-94.

Mr. Waller only took charge of the Chittagong Division in the end of February, replacing Mr. Oldham who went on leave to England. He was therefore under much disadvantage in drawing up his report of the year 1893-94, but he has wisely made considerable use of the notes left for him by Mr. Oldham regarding the events of the year.

2. All the districts of the Division suffered from changes. Putting aside short privilege leave intervals, Tippera had three Magistrate-Collectors and Chittagong had three. Noakhali kept its Magistrate till nearly the end of the year. The Lieutenant-Governor saw with regret the severance of Mr. Slack's long connection with the Chittagong district, in which as Settlement Officer and as Collector he has done excellent service, but his health required, and his standing entitled him to, a more favourite and salubrious district. Of the four sub-divisions, three kept their officers throughout the year, but Cox's Bazar was subjected to numerous changes.

3. Mr. Waller is right in holding (paragraph 27 of the report) that, if money is distributed for the relief of famine under the rules of the Famine Code, whether it be in the form of wages on relief works, or of gratuitous relief to distressed people in their homes, a report should be submitted to Government stating the facts of the case, and the periodical return prescribed by the Code should be furnished.

4. The Commissioner is requested to submit a separate report elucidating Mr. Oldham's opinion (in paragraph 42) that there has been a loss of efficiency through the transfer of the charge of Provincial and Imperial public buildings from Executive to District Engineers. The attention of the Inspector of Local Works is specially called to these remarks.

5. *Paragraph* 65.—Mr. Oldham has found that it is the practice of junior Magistrates in trying summons cases to record evidence at full length, instead of recording only a memorandum of the evidence, which is permitted by the law and tends to expedition in the disposal of cases. Commissioners of other Divisions may think it desirable to call the attention of Magistrates of districts to this remark.

6. *Paragraph* 92.—The Commissioner's remarks on the Wards' Estates in the Noakhali district are of much importance, and indicate the rules which should generally govern the consent of Court of Wards to undertake the management of private estates, and the principles on which they should be administered. These remarks were before the Lieutenant-Governor on the occasion of his recent inspection of Noakhali, and have been fully dealt with in his Inspection Note.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,
Secretary to the Government of Bengal.

ANNUAL GENERAL ADMINISTRATION REPORT OF THE CHITTAGONG DIVISION FOR 1893-94.

No. 554M., dated Chittagong, the 30th June 1894.

From—R. M. WALLER, Esq., Offg. Commissioner of the Chittagong Division,
To—The Secretary to the Government of Bengal, General Department.

I.—CHARGE.

I HAVE the honour to submit the General Administration Report for 1893-94 of the Chittagong Division, of which Mr. Oldham was in charge up to the 25th February 1894. I joined on the 26th, and continued in charge to the close of the year.

(*a*) Division.
(*b*) Districts.
(*c*) Subdivisions.

DISTRICTS.	Subdivisions.	Names of Officers.	Period.
1	2	3	4
Tippera ...	...	Mr. R. T. Greer, C.S. ...	From 1st April to 25th July 1893.
		„ E. Geake, C.S. ...	„ 26th July to 26th August, and from 7th November to 6th December 1893.
		„ Barada Charan Mittra, C.S.	From 27th August to 6th November 1893.
		„ R. W. Carlyle, C.S. ...	„ 7th December to 31st March 1894.
	Brahmanbaria	Babu Govinda Chandra Basak.	„ 1st April 1893 to 31st March 1894.
	Chandpur ...	„ Prakash Chandra Sinha	Ditto ditto.
Noakhali ...	...	Mr. Nanda Krishna Bose, C.S.	„ 1st April 1893 to 15th March 1894.
		„ Surjya Kumar Agasti, C.S.	„ 16th to 31st March 1894.
	Fenny ...	Babu Bagala Prasanna Mazumdar.	„ 1st April 1893 to 31st March 1894.
Chittagong	...	Mr. F. A. Slack, C.S. ...	„ 1st April to 19th August 1893.
		„ C. J. Stevenson-Moore, C.S.	„ 20th August to 23rd December 1893, and from 23rd to 31st March 1894.
		Mr. C. P. Caspersz, C.S. ...	„ 24th December 1893 to 22nd March 1894.
	Cox's Bazar...	„ C. F. Manson ...	„ 1st April to 16th May 1893.
		„ W. N. Delevingne, C.S....	„ 17th May to 2nd July 1893.
		„ C. H. Swinden ...	„ 3rd July 1893 to 3rd January 1894.
		„ J. T. Rankin, C.S. ...	„ 4th January to 8th March 1894.
		„ A. J. Fraser ...	„ 9th to 31st March 1894.

II.—TOURS AND INSPECTIONS.

(*a*) Tour of Commissioner.

2. Mr. Oldham was on tour for 121 days, and made all the inspections except Cox's Bazar, which he could not visit because the *Chaffinch*, which was expected to return from the docks on the 31st January, did not arrive till 17th February. I was out for three days in March, and finished the inspection of Cox's Bazar. Mr. Oldham visited Tippera thrice and the district of Noakhali twice. In July he held the annual conference with the Princes of Hill Tippera, the Maharaja being unable to go to Comilla owing to illness. In November he visited Noakhali and the islands to enquire into the effects of the cyclone of the 22nd October, and again in January to examine the progress of land acquisition work on the Assam-Bengal Railway. He went as far as Chaudagram in Tippera to meet Mr. Carlyle.

Rangamati was visited by Mr. Oldham five times during the year. In May he was there to instal the Mong Raja and confer with Captain Shakespear, who had been called down for the purpose. He was again there in September to devise new registers and forms to suit a simple system of procedure, the old registers having been destroyed by fire. In November he went there to hold an examination in the Lushai language, and on his way back he inspected the khas tahsil office at Thandachari. In December he started by land for his annual tour in the South Lushai Hills. He was in those parts from the 17th December to 1st January inclusive; on his way back he inspected the Raojan tahsil office. He was at Fenny on the 23rd and 28th January 1894, Chandpur on the 7th November, and Brahmanbaria on the 9th November, and inspected those subdivisional offices.

3. In Tippera the district officers were on tour for 155 days; Messrs. Greer, Geake, Mittra and Carlyle making 19, 24, 39 and 73 days respectively; 28 days were spent in Hill Tippera. Mr. Geake as Joint-Magistrate spent 17 days in camp.

(*b*) Tours of Collectors or Deputy Commissioners.

Between them they visited every portion of the district and took note of all matters of interest, besides making all the inspections that fell on their way. Mr. Carlyle made a special tour to supervise survey and settlement work in Chakla Roshnabad belonging to the Maharaja of Hill Tippera and the progress of acquisition on the Assam-Bengal Railway.

4. In Noakhali Mr. Nanda Krishna Bose was out for 81 days. During the rainy season he made a special tour through the parts where the crops had suffered to get correct information about the state of the people. His cold-weather tour included the usual inspections and the trial of bad-livelihood cases *in situ*. He visited Char Parbati to overcome the opposition of the tenantry to a survey under the Tenancy Act, and he succeeded in doing so. He inspected all but one thana, all but one khas tahsil office, and 11 sub-registry offices out of 15 in the district. Mr. Surjya Kumar Agasti, who joined at the close of the year, filled up nine days by a short excursion into the mufassal to supervise the working of the Chaukidari Act.

5. In Chittagong Mr. Slack was out for 48 days, doing the usual inspections. Mr. Stevenson-Moore added 34 days, making in addition to inspections special enquiries into complaints against a Rural Sub-Registrar and the rates of compensation for lands acquired for the Assam-Bengal Railway. Mr. Caspersz was out for 24 days visiting different parts of the district.

6. In Brahmanbaria Babu Govinda Chandra Basak was on tour for 91 days, and the second officer, Babu Krishna Dayal Paramanik, on miscellaneous duties for 27 days. In Chandpur Babu Prukash Chandra Sinha was out for 125 days. These two Subdivisional Officers made special enquiries into the state of the crops and the condition of the people, scarcity being anticipated.

(*c*) Tours of Subdivisional Officers.

7. In the Fenny subdivision Babu Bagala Prasanna Mazumdar spent 101 days on his usual tour, exclusive of his journeys to attend the meetings of the District Board at head-quarters.

8. In Cox's Bazar Messrs. Swinden, Rankin and Fraser made between them 90 days' tour, distributed evenly through the year. Mr. Delevingne did not go out while he was in charge from May to July.

9. The tours of the Assistant Commissioner of the Chittagong Hill Tracts and his assistants will be found in the Political section of the report.

10. Mr. Oldham inspected the district offices at Comilla, Noakhali, Chittagong and Lungleh.

(*d*) Inspections of district offices and treasuries.

(1) Commissioner.

11. He inspected the Tippera, Chittagong and Rangamati treasuries. The prescribed form does not apply to the Lungleh treasure-chest, which he inspected minutely. Four sub-treasuries he inspected also.

12. In Tippera the district offices and the treasury were inspected by the Collector twice in the year. In Noakhali Mr. Nanda Krishna Bose inspected them in September and in March.

(2) Collectors.

In Chittagong, beginning in July, Messrs. Slack, Stevenson-Moore and Caspersz finished the necessary inspections of the offices and the treasury twice within the year; but from an explanation received from the Collector it seems that the answers to the prescribed questions were, in one department at least, done by the sarishtadar, which was irregular.

13. Mr. Oldham inspected the subdivisional offices at Fenny, Chandpur, Brahmanbaria and Rangamati, and the sub-treasuries as stated above, leaving Cox's Bazar for me; and I inspected in March the subdivisional office and sub-treasury, as also the khas tahsil office there.

(*e*) Inspection of subdivisional offices and treasuries.

(1) Commissioner.

14. Brahmanbaria was inspected by the district officer in September and again in January, and Chandpur in October and in February.

(2) Collectors.

The Fenny office and treasury were inspected by the Collector in August and in January. The Cox's Bazar subdivision was inspected by Mr. Stevenson-Moore in October, and by Mr. Caspersz in February.

III.—WEATHER AND CROPS.

15. The rainfall in the Division was 131·11 inches against 94·02 the year before. The rainfall of May and June was terrific in Chittagong and in both the hill charges, and did much damage. It was extraordinary elsewhere. The rainfall of July, and again of August, was terrific in Tippera and Noakhali, where it was followed by two sets of inundations, those of August being the highest on record. Elsewhere it was extraordinary, but the floods in the hills did not quite attain the height of those of 1877. A storm swept over the Division on the 22nd October 1893, doing damage everywhere. In Noakhali it was a cyclone, and in the Bay and river over 200 lives were lost. The damage to Government property alone was Rs. 20,000.

Except in Chittagong, where they were not very good, and in the South Lushai hills, the main crops were poor. In Tippera and Noakhali insects did much damage after the cyclone.

The cotton crop in the Chittagong Hill Tracts was a failure, and the rice was not up to the average. Mr. Oldham says he noticed a great increase in hemp cultivation in Chittagong.

16. In Tippera there was great mortality among cattle for want of fodder. About 25,000 are reported to have died.

The Collector of Noakhali reports that the whole district was for some time under water, and the tract of land in the Chagalnya station, lying between the hills streams Matamori and Silonia, was flooded thrice by the overflow from those rivers.

IV.—PUBLIC HEALTH.

17. The health of the Chittagong Hill Tracts and South Lushai Hills was decidedly good. Mr. Oldham says that in the absence of figures his impression was that it was very unusually good elsewhere, and that although the cyclone was followed by the usual cholera, and that cholera and small-pox were constant throughout Chittagong during the year.

According to the Sanitary Commissioner, and, what is more to the point, according to the dispensary figures, Chittagong is the healthiest Division in Bengal, and Mr. Oldham's impression coincides with these deductions. He says perhaps the exposure of the Division for several months to the full force of the south-west monsoon, coming up pure and cool from the Bay of Bengal, may in part account for this, for parts of Tippera and the submontane parts of Noakhali and Chittagong have the conditions for engendering malaria. The physique of the people is generally good, and in some classes and races very fine. The jail population are not fair samples. Except in riot cases, only the physically and morally depraved are found in jails in this Division. Dr. Calvert the late Civil Surgeon, is reported to have said that from his observations in jail, the skull of an ordinary Chittagong Muhammadan was thinner than that of a European. Mr. Oldham says he had heard the same said of the Backergunge people, and remarks:—"The point is so curious that it deserves investigation. The tropical Asiatic skull is generally believed to be half as thick again as the European's."

18. The figures for Tippera are—

	1893.	1892.	1891.
1	2	3	4
Cholera	7,206	3,038	3,796
Small-pox	152	72	48
Fever	27,579	26,763	22,481
Other diseases	7,110	6,444	5,697
Total ...	42,047	36,317	32,022

19. It was an unhealthy year in Tippera. The death-rate according to available statistics, which are, however, by no means unimpeachable, was 25·9 per thousand against 18·6 the year before and 18·5 in 1891-92. The figures for these three years certainly leave an impression on the mind that the last year was more than usually bad, though it may not be possible to rely upon the percentages as accurate. Inundation and high prices of food caused damp, exposure, short and unwholesome diet, which naturally gave an impetus to cholera, fever, and bowel-complaints. Cholera started from Chandpur, spread over the whole district, and was most severe in Brahmanbaria, where the District Board had to depute three doctors on special work. Small-pox also broke out in an epidemic form in thana Daudkandi.

20. In paragraph 18 of Mr. Oldham's Divisional Report for 1892-93 a report was promised to be made this year on Mr. Greer's scheme, which is there noticed. The scheme, it seems, was worked by the Civil Surgeon, and met with partial success. Rupees 176 was contributed by the Nawab of Dacca, Maharaja Durga Charan Law of Calcutta, and the manager of the Sarail estate, and five vaccinators were sent out, who performed 2,779 primary operations. This was a fair beginning, and it will depend upon the Civil Surgeon and the Magistrate to still further develop it.

21. The figures for Noakhali are given below:—

	1893.	1892.	1891.
1	2	3	4
Cholera	5,682	3,506	666
Small-pox	58	7	27
Fever	22,577	23,818	20,178
Other diseases	4,061	3,901	2,559
Total ...	32,378	31,232	23,430

22. The health of the town was unusually good up to October, but a heavy mortality dates from that month after the cyclone and the storm-wave. A cholera epidemic broke out, and medical aid had to be sent promptly to the parts most severely affected. Small-pox is uncommon in Noakhali, and correspondence is going on with the Medical Department as to a proposal emanating from the Deputy Sanitary Commissioner to get Government to extend the law making vaccination compulsory to the whole district. The Ferazi Muhammadans of the district oppose arm-to-arm vaccination on religious grounds, and the majority are unwilling to pay vaccination fees. In some instances the vaccinator had to sue people in the Civil Court for his two-anna fees. The late Magistrate, Mr. Nanda Krishna Bose, was for bovine lymph and gradual introduction of vaccination through the District Board dispensaries. This latter proposal, however, is not feasible. The Magistrate does not seem to have tried to overcome prejudice by his personal influence, as I know from previous experience as Magistrate of Noakhali in 1886 can be done. There is, I believe, a verse in the Koran which some fanatics read as making arm-to-arm vaccination contrary to divine command, but the opinion of the most learned Maulvis is not to this effect. But no one can on the ground of the verse alluded to object to vaccination from bovine lymph. I directed the Magistrate to warn those who oppose vaccination in the villages reported as refractory that if they continued to unreasonably refuse to be vaccinated, it would be necessary to represent their attitude to Government with a view to compulsion. The Magistrate is to report the result of this action after a few months.

23. The Chittagong figures are:—

	1893.	1892.	1891.
1	2	3	4
Cholera	705	6,783	526
Small-pox	105	353	694
Fever	27,465	26,976	22,375
Other diseases	4,311	5,206	4,117
Total ...	32,586	39,318	27,712

24. The general health of the town and the district was better than in the previous year. There was less cholera and small-pox and there was no epidemic of these diseases. Fever claimed the largest number of victims, but the Civil Surgeon thinks that it is difficult to come to any conclusion in this matter, as nearly everything except cholera and small-pox is, by those who report the deaths, called fever. In the town of Chittagong mortality from fever is annually increasing. The figures for 1891, 1892 and 1893 show in each of those years 153, 533, and 431 deaths respectively. Cox's Bazar was generally healthy, and there was no epidemic there.

V.—MATERIAL CONDITION OF THE PEOPLE.

25. Mr Oldham remarks:—

"There is not much to be said under this head with regard to a Division which has been excluded from the purview of the Famine Code. But the year under report was an exceptional one. The natural calamities referred to above diminished the usual prosperity and comfort of the people to no small extent, and petty agriculturists, men with fixed incomes, and the helpless and the widow, felt the pinch in Noakhali, and more acutely in Tippera."

Mr. Carlyle, Magistrate of Tippera, reports that, "owing to the high floods which prevailed, serious damage was done to the aman, with the result that the average outturn for the district was reckoned at 10½ annas, varying from 12 annas in Sadar to 11 annas in the Chandpur and 8 annas in the Brahmanbaria subdivision, according to the official reports. The partial failure of the main food-crop of the district (it is estimated to give nearly 60 per cent. of the food-supply) followed a very poor aus crop (about 10 annas for the whole district). Prices have ranged high, rising, according to the prices-current returns, as high as Rs. 5 per maund of rice in August. They have now fallen to about Rs. 3-4 to Rs. 3-8 per maund.

"The result of the poor crops is that the grain-stocks are very much lower than usual. The aus usually supplies a large part of the home consumption, and a considerable part of aman is exported. This year, on the other hand, rice has been imported in considerable quantities, and the exports have been much smaller than usual.

"Owing to the combination of poor crops and high prices which have not benefited the raiyats generally, as they have had little rice to sell, a good deal of distress has been caused in the part of the district most affected by the floods. The distress does not approach the dimensions of a famine.

"The worst time of the year, however, will be in May and June. The supplies of grain in store after the aman was cut are now running out, and there will be a certain amount of suffering among the more helpless classes till the raiyats commence to harvest the aus some time in June.

"The area affected coincides almost exactly with the Brahmanbaria subdivision and the Muradnagar thana in the Sadar subdivision, covering altogether an area of 994 square miles. The whole of this tract is not uniformly affected; for instance, in Muradnagar the worst portions lie north of the Gumti, especially in the north and north-east of the thana. In Brahmanbaria, again, one of the tracts most affected is the southern portion of

Nabinagar thana adjoining the Muradnagar thana. Another specially affected portion lies in the north-east of the Brahmanbaria subdivision. Probably the majority of the population are very badly off and living from hand-to-mouth; but by far the larger portion have managed by mortgaging their lands, selling some property, or borrowing, to get enough to carry them on till the aus paddy and jute is cut."

26. As evidence of the usual prosperity of this Division, Mr. Oldham has left the following on record:—"In Tippera out of Rs. 6,500 or more subscribed to relieve distress from the inundation, three successive Collectors found themselves unable to spend a single pice up to the 10th September 1893, when I insisted on the money being distributed. In Noakhali similar contributions were only expended on the occurrence of the cyclone and under my direct pressure on the spot." It seems that gratuitous relief, defrayed in part from the funds of the District Board, and in part from private subscriptions to the amount of Rs. 700, was distributed in the Chandpur subdivision in Tippera during the month of November 1893.

27. By oversight, apparently, no report as prescribed in the Famine Code was sent to Government, but I presume that where famine relief becomes necessary, the rules of the Code apply, whether the tracts have been previously considered proof against famine or not.

VI.—EMIGRATION AND IMMIGRATION.

28. The temporary efflux from Noakhali and Chittagong to Arakan for high wages took place as usual. As anticipated, a large number of people from Bihar and Oudh, as also from Ganjam, came to work on the Assam-Bengal Railway.

From Tippera fishermen are reported to go over to Sylhet and Mymensingh to cure fish annually after the rains.

VII.—PRICES OF FOOD AND LABOUR.

29. Labour commands a high price everywhere in the Division, though in Noakhali it is comparatively cheap. The figures for the Chittagong Hill Tracts have been embodied in the statement. Mr. Oldham remarks:—"Mr. Carstairs' Sonthals now come to us for Rs. 6 and rations. In Chittagong a good whole-time labourer cannot be had for less than Rs. 10 a month. If men are found working for less, it is either because they are feeble and below par, or because they do not work whole-time, and attend to cultivation of their own or even do jobs for hire elsewhere."

VIII.—MANUFACTURES AND MINES.

30. There are no mines in the Division.

Articles made of brass and bamboo are manufactured in Tippera. Tea, and coffee as an experiment, are manufactured in Chittagong. The quantity of tobacco exported was 4,140lbs only this year. The rice mill of Messrs. Bulloch Brothers and Company did very little business. The ship-building industry was almost at a standstill. The comparative table below gives the exact information:—

Articles.	1893-94.	1892-93.	1891-92.
1	2	3	4
	lbs.	lbs.	lbs.
Tea	1,119,426	1,078,457	1,262,174
	Mds.	Mds.	Mds.
Rice (milled) ...	70,638	1,82,540	1,78,810
Sea-going vessels (built)	1 vessel.	4 vessels.	8 vessels.

The year was not good for tea, and the quality was not up to the mark.

IX.—TRADE AND COMMERCE.

31. The trade of this Division is water-borne; but the Assam-Bengal Railway under construction will undoubtedly create a more popular, if not

cheaper, route. Cart traffic has not passed its initial stage, but extended, and better road communication may in the future establish it. The record of the transactions at the port of Chittagong is the index of the volume of trade in this Division. As reported before, the staples for export are rice, oilseeds, hides, jute, cotton, betel and cocoanuts, chillies, tobacco, tea, and dried fish. The imports are mineral oils, piece-goods, salt and yarn twist. Railway materials imported in large quantities form an abnormal item. Steamer Companies provided as usual for the goods and passenger traffic of the Tippera and Noakhali districts. Communication with the islands south of Noakhali is still uncertain and intermittent, and the question is annually revived and dropped for want of funds.

32. The following is a comparative table of the foreign vessels that visited Chittagong:—

	Number of Vessels.			Tonnage.		
	Entered.	Cleared.	Total.	Entered.	Cleared.	Total.
1	2	3	4	5	6	7
1892-93	37	29	66	41,751	41,215	82,966
1893-94	34	15	49	32,844	26,694	59,538
	—3	—14	—17	—8,907	—14,521	—23,428

The jute and rice trade being dull, fewer vessels were chartered: hence the decrease.

33. The amount of interportal trade as denoted by the number and tonnage of vessels is given below:—

	Number of Vessels.			Tonnage.		
	Entered.	Cleared.	Total.	Entered.	Cleared.	Total.
1		3	4	5	6	7
1892-93	734	762	1,496	211,362	213,357	424,719
1893-94	626	617	1,243	202,030	208,885	410,915
	—108	—145	—253	—9,332	—4,472	—13,804

It is said fewer vessels brought jute from Narayanganj for shipment to Europe, and this accounts for the decrease.

34. The value of the sea-borne traffic is tabulated below:—

	Value of trade with-				
	Foreign ports.	British ports in other Presidencies.	British ports within the Presidency.	Indian ports not British.	Total.
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Rs.	Rs.
1892-93	88,31,389	16,06,869	1,19,22,852	.....	2,23,61,110
1893-94	90,14,997	16,47,317	1,31,22,473	4,170	2,37,88,957
Difference ...	+1,83,608	+40,448	+11,99,621	+4,170	+14,27,847

The net increase is Rs. 14,27,847, due to the importation of railway materials and kerosine oil from the United Kingdom and America, and of railway sleepers, chillies, and cotton goods from Rangoon and Calcutta.

35. The value and quantity of exports are tabulated below:—

	1892-93.		1893-94.		Increase.		Decrease.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
1	2	3	4	5	6	7	8	9
Foreign.	Tons.	Rs.	Tons.	Rs.		Rs.	Tons.	Rs.

				66,04,849				
Interportal.								
	Cwt.		Cwt.				Cwt.	
Cotton	31,318	5,81,129	11,119	3,00,451	.....	.....	20,199	2,80,678
	Tons.		Tons.				Tons.	
Rice and paddy	10,071	6,18,006	3,510	3,01,402	.....	.....	6,561	3,16,604
	lbs		lbs				lbs	
Tea	975,089	5,07,774	658,619	3,50,775	.....	.....	3,16,470	1,56,999
Hides	.....	2,29,145	.....	2,47,887	.....	18,742	...	.....
	Tons.		Tons.				Tons.	
Salt	5,275	1,65,424	3,625	1,40,577	.....	.....	1,650	24,847
All other articles	.....	15,85,718	.....	29,51,526	.....	13,65,808	.....	.....
				42,92,598				
Total ...	.....	1,20,88,736	.....	1,08,97,447	.....	... ..	.....	11,91,289

The net decrease in value is Rs. 11,91,289. As was to be expected, there were diminished exports of rice, jute, cotton, and tea (interportal).

36. The value and quantity of imports are tabulated below:—

	1892-93.		1893-94.		Increase.		Decrease.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
1	2	3	4	5	6	7	8	9
Foreign.	Tons.	Rs.	Tons.	Rs.	Tons.	Rs.	Tons.	Rs.
Salt	14,205	2,83,130	13,302	3,45,455	.....	62,325	903	.....

				1,04,81,362				
Total ...	.....	1,02,72,374	.....	1,28,91,510	.....	26,19,136	.....	.....

The net increase in value is Rs. 26,19,136, contributed chiefly by large consignments of railway materials and oil—about six times more than what was imported in 1892-93. It is chiefly kerosine oil imported for local consumption. The increase is said to be due to smaller importation in the previous year.

Port of Chittagong.

37. The constitution of the Port Trust remained unchanged. There was one election and three appointments owing to death and resignation. The European electors did not, it seems, know that plumping had been permitted, and so did not plump for a European candidate, which would have, had they done so, secured the election of a European. The Commissioners held 12 ordinary and 1 special meeting, and the average attendance was over 5 per cent.

During the year the Commissioners had to consider the question of acquiring a large area of the river foreshore for future trade requirements. The efforts of the Assam-Bengal Railway to obtain a portion of the river frontage for landing their materials brought this matter prominently to the front. A Committee was appointed by Government in November last to

make enquiries, and it came to the conclusion that it was inexpedient for the Port Trust now to acquire the land for a port line, and that the Railway Company might be allowed to acquire the land and construct a wharf, the former reserving the power of revoking the grant on payment of costs. The Government of India, however, overruling this decision, held that the Port Trust, and not the Railway Company, should carry out all the work of landing and shipping and should construct piers and jetties for general traffic, the Railway Company being permitted to construct only temporary jetties absolutely necessary for landing their material. This policy the Port Commissioners will not be able to carry out without raising a further large sum by way of loan; while a debt of Rs. 1,75,000 for the tug-steamer *Gekko*, and of Rs. 25,000 promised as a contribution to the proposed Seamen's Hospital on the Rungmahal and Flagstaff hills, is already pressing upon them.

38. The *Gekko* is another difficulty with the Commissioners. Though the debt for the tug was reduced during the year from Rs. 2,00,000 to Rs. 1,75,000, her earnings fell very much short of the cost of her up-keep. She earned only Rs. 7,046 against an expenditure of Rs. 38,291, inclusive of interest and repayment of loan on her account. She is very serviceable in the way of carrying stores and affording means for frequent visits to light-houses, &c., but she cannot compete with the Bassein Company's tug *Mary* in towing up vessels, because the latter pays a heavy commission to ship-masters visiting the port for using her, and she only remains here during the busy season when she is frequently employed. A proposal has been made to amalgamate towage charges with port dues to meet this difficulty, and this seems to be the only way out of it.

39. The buoys, tidal gauge, signal flagstaffs, moorings, and jetties had their usual annual fittings and repairs done. The light at Norman's Point worked very well, the clockwork giving no trouble. The Kutubdia light was also satisfactory, though the clockwork gave a little trouble and the revolutions were not quite correct at times.

The Pilot Service was revised during the year, and on the recommendation of the Port Commissioners, Government sanctioned a charge of Rs. 2 per day on all vessels visiting the Moiscally creek for repairs.

40. The scheme for a great central hospital for the benefit of the port, as well as of the municipality and the district generally, referred to in the last report, is approaching completion. The question of funds has been settled, and the plan and estimate are under preparation. As expected, there was some opposition when it was known that the municipality and the District Board would co-operate. But the reasons advanced were unsound and based on imperfect information, and the protests sent up were in consequence rejected.

Hospital port dues.

The health of the port was good throughout the year. There were only three fatal cases of cholera and none of scurvy. The seamen's resort continued to be carried on under the superintendence of Brother Stephen for the benefit of sailors visiting the port, receiving the usual donation of Rs. 500 from the Port Commissioners.

41. The following figures show the financial position of the Port Trust:—

Receipts.

	1892-93.	1893-94.	Increase.	Decrease.
	Rs.	Rs.	Rs.	Rs.
Port Fund ...	70,183	77,584	7,401	...
Pilotage Fund ...	15,040	14,842	...	198

Expenditure.

Port Fund	1,09,024	60,516	...	48,508
Pilotage Fund ...	9,551	11,463	1,912	...

The port dues show decreased receipts, amounting to Rs. 3,590, on account of the dullness of the jute and rice trade during the year.

There were increased receipts under the head Hospital Port Dues. The increased expenditure was incurred chiefly for the establishment of the *Gekko* and the pay of the Surgeon to the Port Fund at the rate of Rs. 125 per month, sanctioned by Government in February 1893.

X.—ADMINISTRATIVE CHANGES.

42. The chief change has been the creation of the Ramgarh-Sitakand Forest Reserve with an area of 130 square miles, and the publication of notifications of several other large areas in Chittagong to be similarly treated. This measure was much needed. Private talukdars were found actively exploiting these Government forests by a system of tolls and farms. Mr. Oldham says: "I repeat with force my remarks of last year about the transfer to District Boards of the Executive Engineer's duties. There have been prominent instances of loss of efficiency in Chittagong and Noakhali. In Chittagong one case (the collapse of the jail wall) was attended with serious loss of life, and Government could hold no one responsible. In a separate order it was held that these District Engineers are not Government servants.

"In Noakhali the District Engineer was refused an allowance (which would not have been pensionable) for the extra work. So the District Board have given it to him by increasing his pay; and in this respect there has been no saving of public funds. The Chittagong District Board, who think the allowance granted to their District Engineer insufficient, contemplate doing the same, and I intended to resist this."

43. The resolution of the Police Redistribution Committee was received towards the close of the year, reorganizing the local force and stations. The changes in the force will be noticed under the head Police. The outposts at Farashganj and Silonia in Noakhali and at Parki in Chittagong have been abolished under these orders.

The collection of the zamindari dák cess has been transferred to the collectorate, and of processes in cognizable cases to the amalgamated staff under the Collector's nazir, thus giving further relief to the Court Sub-Inspector.

44. Among local changes may be noticed the abolition of the Balammara salt pass-station in Noakhali, and the extension of section 34 of Act V of 1861 to Chandpur where there is no municipality.

XI.—STATISTICAL ENQUIRIES.

45. Except the collection of vital statistics, which is closely supervised by the District Officers, and the enumeration of date and Palmyra palm trees for excise purposes reported to have been concluded, no statistical enquiry was undertaken.

Information about hail-storms was called for by the Government of India, but nowhere had any sufficient record been kept.

XII.—CIVIL JUSTICE.

46. Details of the work of the Civil Courts have been given in the prescribed statements appended.

Rent suits at munsifis increased from 31,237 to 32,269. Tippera shows a slight falling off in this respect, but Noakhali and Chittagong show the largest increase. The Judge of Noakhali attributes the increase of litigation to excessive subinfeudation generally; and two of his Munsifs, whom he quotes with approbation, add the provisions of the Bengal Tenancy Act as one of the causes of increase in the number of rent suits. Their remarks, as they illustrate the state of things common throughout the Division, are quoted below. One writes: "The increase is due particularly to the operation of the Bengal Tenancy Act, which has given the raiyats greater security of tenure, and consequently made them indifferent to the punctual payment of their rent. The landlords, on the other hand, bring as many rent suits as possible, so as to harass their tenants and compel them to agree to their terms." The other Munsif attributes the increase in his court partly to the same causes and other effects of the Tenancy Act, such as the limitation of the power to enhance rent and to demand excessive interest on arrears, and partly to the excessive subinfeudation of the land which prevails in the district, and the Muhammadan law of inheritance which divides small holdings among a number of co-heirs. "Such leases in this part of the country," he says, "have given rise to a class of speculators in land, and while the landlord of this type on the one hand makes every attempt to evade the limitation of enhancement and of interest prescribed by the Bengal Tenancy Act, the tenant naturally, on the other

hand, takes shelter under the provisions of the above Act and repudiates his own agreement as having been made under coercion. The habit of opposing such a landlord gives so great a zest that it not unfrequently happens that the tenant resorts to the contrivance of forged receipts in print purporting to be an acquittance in full of all demands for rent." The wealth and litigiousness of the tenantry might have been added, and the large needy and greedy class of low unprincipled touters and mukhtears.

47. With regard to the number of witnesses examined and their detention, the statements referred to give the following information:—

The Judges and Sub-Judges examined 1,684 witnesses during the year, 406 of whom, or 24·1 per cent., were detained over two days.

One hundred and one thousand six hundred and eighty witnesses, against 97,741 the year before, were examined by the Munsifs, and 15,935 witnesses, or 15·6 per cent, were detained over two days. The percentage last year was 16·7. The percentage in Tippera and Noakhali was 13·4, but in Chittagong it was 20·4.

48. It may be interesting to give here figures showing the action of the Divisional Magistracy in this important matter.

Thirty-six thousand two hundred and ninety-five witnesses were examined by them, of whom 1,402 were detained over two days, the average percentage being 3·8. No doubt civil cases are usually more intricate than the average criminal case is, and witnesses in them have to be examined more exhaustively, and thus more time is required for the examination of each individual witness; but by proper foresight this being known, witnesses might be detained no longer in civil than in criminal cases.

XIII.—CRIME.

49. In this Division there are no distinct criminal classes, and the crime reported is always the work of the evil proportion of the ordinary rural population, which is found to exist everywhere. Riots are not uncommon, originating in sudden quarrels about rights to property, occasionally ending in loss of life or grievous hurt. The offences of counterfeiting coin and of incendiarism are also features of the crime of this Division. The cessation of all crime in the inundated tracts of Tippera and Noakhali during the inundation was remarkable.

50. The figures under the main divisions of cognizable and non-cognizable crime for the past two years are given below:—

District.	Cognizable.		Non-cognizable.		Cognizable.		Non-cognizable.	
	1892.	1893.	1892.	1893.	Increase.	Decrease.	Increase.	Decrease.
1	2	3	4	5	6	7	8	9
Tippera	2,143	1,985	7,708	6,936	...	158	...	772
Noakhali	977	1,127	3,272	3,081	150	...	...	191
Chittagong ...	2,279	1,708	3,103	3,105	...	571	2	...
Total ...	5,399	4,820	14,083	13,122	...	729	...	961

51. In Tippera the decrease in cognizable cases falls chiefly under the heads counterfeiting coins, house-trespass, Arms Act, public and local nuisances, and section 110, Code of Criminal Procedure. Only three coining cases were detected, against eight the year before. Cases under the Arms Act dropped from 64 to 10; the Magistrate says the large number of prosecutions the year before made the people more careful. Nuisance cases dropped from 309 to 138, which the Magistrate says was owing to an adverse ruling of the High Court as to what constitutes an offence under section 283, Indian Penal Code, in the obstruction of waterways. The fluctuations under the other heads are slight.

The number of murder cases was nearly the same as in 1892-93, while that of culpable homicide fell from 9 to 5; petty riots and thefts of crops and fodder increased to some extent, as was to be expected in a year of damage by flood and storm.

There was a decrease of non-cognizable cases under all heads except "cattle trespass," probably owing to the people not having money to spend on such cases owing to loss of crops. The Tippera Magistrate thinks that the use of section 106 of the Code of Criminal Procedure has resulted in a decrease of assaults and the like. No doubt it might be more generally had recourse to, not in petty assault cases, but in all cases where the cause of quarrel remains, and is likely to remain, in existence.

52. In Noakhali there was an increase in the number of cognizable and a decrease of non-cognizable cases. Petty thefts, owing to high prices brought about by the inundation and the cyclone, rose from 202 to 318. There was a rise also in the offences of murder and arson from 1 to 4 and 13 to 18 respectively.

The system of referring cases of non-cognizable crime to panchayats, fully reported in last year's report, accounts for the further reduction of offences of this class. This procedure is, I find, not at all novel. It was introduced by Mr. Skrine in Tippera in 1886 while acting as Magistrate there.

53. In Chittagong there was a decrease in the number of cognizable offences, chiefly rioting, trespass, and burglary. It is reported that the enforcement of the preventive sections of the Criminal Procedure Code, and the completion of the general survey of the district, which previously was a fruitful source of agrarian quarrels, have brought about this result. It is also added that trespass in the shape of jooming on Government hills by the people of the Hill Tracts has been effectually stopped. The contraband trade in opium with Arrakan was renewed with fresh vigour last year. A man with a consignment of 7 seers of opium was caught and punished.

Non-cognizable crime was stationary.

XIV.—POLICE.

54. The following changes took place in the police force and outposts in the Division, according to the suggestion of the Police Redistribution Committee, after the close of the year:—

In Noakhali the outposts at Silonia and Farashganj were abolished, and that at Parki in Chittagong. The redistribution of the force is given below:—

District.	Increase.				Decrease.				Remarks.
	Inspector.	Sub-Inspector.	Head-constable.	Constable.	Inspector.	Sub-Inspector.	Head-constable.	Constable.	
1	2	3	4	5	6	7	8	9	10
Tippera ...	...	15	...	...	...	...	13	2	
Noakhali ...	...	...	...	...	...	1	...	19	
Chittagong ...	...	12	...	...	...	...	15	17	

55. The following remarks have been left by my predecessor, Mr. Oldham, on the police:—

"Tippera and Noakhali did the best police work. Tippera was again distinguished by its hearty co-operation with the Magistrates in contrast with the state of affairs in 1891. The superiority of the chaukidars in Noakhali, so often noticed, I find to be due to the efforts made for their organization and improvement by Mr. Westmacott about 12 years ago."

56. The appended Statement X shows the work of the police during the year under report. The percentage of convictions obtained by the police in cases disposed of during the year was 74·9, 78·7 and 83·8 in Tippera, Noakhali

and Chittagong respectively, against 53·6, 81·6 and 70 per cent. in 1892-93. In Chittagong the success gained was principally in the minor cases. With regard to the falling off in the percentage in Noakhali, Mr. Nanda Krishna Bose, the late Magistrate, remarks: "The detective and judicial results this year show a falling off as compared with those of the year 1892, and this is due mainly, if not solely, to the fact that the subordinate police officers could not be so well supervised and controlled. First there was a change of officers at the head of the police; secondly, for some time in the year very junior officers, new to the work, officiated as inspectors; and thirdly, one of the best prosecuting court sub-inspectors was taken away from the district for some time."

57. In coining cases the police of Tippera and Noakhali secured in each of those districts 100 per cent. conviction, and 50 per cent. were convicted in Chittagong. In rioting cases there were convictions in 79·01 per cent. in Tippera, in 90·7 in Noakhali, and in 53·3 per cent. in Chittagong. In "other murder cases" there was no conviction in Tippera in the 2 cases disposed of, though the percentage of convictions in Noakhali was 100, and 80 in Chittagong. There was no real dacoity in Tippera, Noakhali or Chittagong.

58. In Tippera two cases of torture were brought against the police. One case fell through, and in the other four constables were convicted and sentenced to rigorous imprisonment by the Sessions Judge, three for two years and one for one year. In this case the High Court, while upholding the convictions on appeal, reflected unfavourably on the proceedings of the local officials.

In Chittagong a charge of misappropriation of the sale proceeds of an unclaimed boat brought against a sub-inspector fell through. But the man was departmentally punished with dismissal.

In Noakhali two constables were judicially punished, but it is not reported for what offence.

59. In Tippera a special police force had to be quartered at Sonarchur to quell disturbances fomented by the Nag Babus of Barudi; 25 special constables had to be enlisted, 9 at Sonarchur and 16 at Durgapur, the village where an Engineer of the Assam-Bengal Railway was severely wounded in a riot.

60. The new police patrol boat in Tippera was run over by a steamer of the India General Steam Navigation Company, and damaged. Some of the crew were injured, and one died. The serang of the vessel was tried, and acquitted, because it was not proved that the collision was due to his negligence.

Rural Police.

61. In Tippera the new Chaukidari Act was in force, pargana Dollie excepted, where the sole liability of the zamindar to maintain the rural police was under consideration. The question has since been settled. The Magistrate reports that the village police in Tippera as a body were not very efficient and were not of as much help to the regular force as should be the case, but he has not given any details justifying his views.

In Noakhali the chaukidars are recruited from the better class of cultivators, and all of them are said to have a high idea of their position. The Magistrate reports that the improvement in their pay and status has not raised their efficiency in their watch-and-ward duties, which they neglect. I have lately called the attention of the Magistrates to the proper supervision of this important duty of the rural police. Twenty-five chaukidars were rewarded for giving assistance in arresting absconders and recovering stolen property.

In Chittagong the rural police are reported to have worked fairly well. Their minimum rate of pay was raised from Rs. 3 to Rs. 4. The maximum is Rs. 6. Wages being very high in this district, the remuneration offered to chaukidars does not attract sufficiently competent and trustworthy men.

62. The Chaukidari Reward Fund was started at different dates in the districts in this Division. There is no prescribed form for keeping the accounts of this fund. The following figures show the receipts and disbursements in 1893:—

	Receipts.			*Disbursements.*		
	Rs.	A.	P.	Rs.	A.	P.
Tippera	265	0	6	64	0	0
Noakhali	255	12	0	123	0	0
Chittagong	1,384	4	3	58	0	0

A more liberal expenditure in rewards is desirable in Tippera and Chittagong.

No case of employment of chaukidars on menial duties has been reported.

XV.—CRIMINAL JUSTICE.

63. The prescribed statements XI to XV give details of 9,091 cases with 13,199 persons disposed of during the year, of which the Honorary Magistrates singly or on benches tried 1,393, or 15 per cent. The figures for the previous year are 9,157 cases with 13,237 persons, of which the Honorary Magistrates disposed of 1,439. The fluctuation in the statistics for the two years is small; on the average each Stipendiary Magistrate disposed of 290·4 cases with 4·7 witnesses per case. Chittagong, however, shows the highest figure, 310 cases on the average per Magistrate against 252·5 in Noakhali, the lowest figure in the Division. Among subdivisions the largest outturn of work is shown by Chandpur, the Subdivisional Officer there having disposed of 621 cases against 232·5, the average disposal at Cox's Bazar.

The average number of witnesses per case is highest in Noakhali, being 7·7 against 3·3 in Chittagong. For Honorary Magistrates the average disposal was 96·6 cases with 2·7 witnesses per case.

64. All the District Officers have recorded their appreciation of the substantial help rendered by Honorary Magistrates. Mr. Carlyle, Magistrate of Tippera, writes: "Some of the Honorary Magistrates tried a large number of cases, and tried them very well. A few, on the other hand, were very irregular in their attendance."

Mr. Anderson, Magistrate of Chittagong, brings prominently to notice the good work done by Babu Kherod Chandra Das, Honorary Magistrate, who attended eighty times and helped much in the disposal of work coming before the bench. The Magistrate of Noakhali reports that the Honorary Magistrates continued to afford appreciable assistance to the administration of criminal justice.

65. My predecessor, Mr. Oldham, has left the following record of his opinion about the work of Honorary Magistrates and criminal justice in general:—

"Work is most expeditiously done in Tippera and most slowly in Noakhali, but taken all round the Noakhali Bench is the best.

"Messrs. McMinn and Weatherall in Tippera were appointed to act as Justices of the Peace, and were given powers of first class Magistrates empowered to sit alone.

"While casually enquiring into bench work, I found that nearly all junior Magistrates in the district, Stipendiary and Honorary, were in the habit of using the form of procedure, prescribed for warrant cases, in summons cases, instead of the summary procedure, which is more like that in a Small Cause Court. I suspect this error is general throughout the Province, and is answerable in no small degree for delays in petty cases.

"The most dilatory Magistrate in the Division was Babu Avinash Chandra Mukerji at Noakhali."

66. The territorial system of jurisdiction for the subordinate magistracy continues to work well in Tippera, and it is necessarily followed in the islands. It is reported that in the island of Sandwip the deputation of a Sub-Deputy Magistrate during the year produced the doubtful benefit of raising the number of cases from 246 in 1892 to 824 in 1893. In Chittagong it was in abeyance during the latter portion of the year.

Benches.

67. In Tippera there were 34 Honorary Magistrates and three benches at Comilla and the subdivision, all exercising second class powers. Eight Honorary Magistrates sit singly, two exercising first class, four second class, and two third class powers.

The Comilla Bench has got original jurisdiction over a fixed area.

The Honorary Magistrates in Tippera disposed of, between them, 809 cases against 666 cases in 1892. The average success in appeal was 71·4 per cent. against 36 the year before.

In Noakhali there are 22 Honorary Magistrates forming one Bench at headquarters, who disposed of 269 cases against 264 cases in 1892. There were no

appeals against the orders of the Honorary Mgaistartes—a fact which can be interpreted either as a sign of undue leniency or of efficiency.

In Chittagong the obsolete Municipal Bench, most of the members of which were Magistrates on the regular Bench, was abolished during the year as superfluous.

Of the 22 Magistrates, one with second class powers sits singly. They disposed of 315 cases against 509 cases in 1892. The absence of Babu Nitya Nandy Roy, the Magistrate who sits singly, for more than six months from the town, accounts partly for the decrease. He had disposed of 145 cases in 1892, while in 1893 he dealt with 61 cases only. From the result of appeals, the decisions of the Chittagong Bench show deterioration, the average percentage upheld being 50·0 against 65·5 the year before.

Attendance of Bench Magistrates.

68. The Noakhali Bench shows the most regular attendance. Tippera comes last with 68·6 as the average percentage of attendances to calls.

Chittagong owes its high percentage of 84·1 to the frequent attendances, without call, of two Honorary Magistrates.

Munshi Johuruddin, of the Brahmanbaria Bench, whose irregular attendance was noticed in my last report, has resigned. I have picked out the following as extreme cases of neglect:—Munshi Arfar Rahman, of the Comilla Bench, attended only thrice out of twenty days on which his attendance was due; Babu Gopi Mohan Roy Chaudhry, of Nabinagar, and a gentleman of the same name of Boidyakote, Brahmanbaria Bench, attended only twice and thrice out of thirteen and twelve calls respectively.

The extreme cases in Chittagong are those of Maulvi Zulfikar Ali, who attended only 4 out of 24 occasions, and of Babu Prosonno Kumar Roy, who attended on only 2 out of 14.

Results of prosecutions.

69. The results of prosecutions for the last two years are:—

District.	By Stipendiary Magistrates.						By Honorary Magistrates and Benches.					
	Number of persons disposed of.		Number of persons convicted.		Percentage of conviction on total disposal.		Number of persons disposed of.		Number of persons convicted.		Percentage of conviction on total disposal.	
	1892.	1893.	1892.	1893.	1892.	1893.	1892.	1893.	1892.	1893.	1892.	1893.
1	2	3	4	5	6	7	8	9	10	11	12	13
Tippera	4,016	4,406	3,125	2,825	63·5	64·1	798	944	400	475	50·1	50·3
Noakhali	2,818	3,089	1,113	1,240	48·0	40·1	306	293	126	110	41·1	37·5
Chittagong	4,085	3,961	2,186	1,991	53·5	50·2	814	506	100	87	12·2	17·1
Total ...	11,319	11,456	6,424	6,056	56·7	52·8	1,918	1,743	626	672	32·6	38·5

The results in Tippera comparatively are the best. In Noakhali the decrease in the percentage of convictions was due to the large increase of petty offences which were, under Mr. Bose's system of reference to panchayets for enquiry under section 202, Code of Criminal Procedure, settled out of court or compromised. In Chittagong the results of trials before Honorary Magistrates show some improvement. In the case of those before the Stipendiary Magistrates the falling off was in non-cognizable cases, this being due to the number withdrawn compromised.

Results of appeals.

70. The quality of the work of Honorary Magistrates has been referred to above. For Stipendiary Magistrates the record is generally satisfactory. The divisional percentage has risen from 69·1 to 72·6, and the improvement appears in the figures for all the districts, but chiefly in those of Noakhali, where the figures show an improvement from 68·1 to 79·3 per cent. Taking into consideration the number of disposals as well as of appeals, marked individual success was achieved by the two Subdivisional Magistrates of Brahmanbaria and the officer at Chandpur. For one Deputy Magistrate the percentage was as low as 20, 37·5 and 50.

Result of sessions trials.

71. The figures for this year show an improvement in all the districts. The percentage of convictions for the Division was 73·7 against 68·5. In Tippera it was 83·8. The Subdivisional Magistrates of Brahmanbaria were successful at the sessions in all the cases they sent up. In Tippera and Noakhali the records are said to have been carefully scrutinized by the District Magistrate before they were sent for trial by the Sessions Judge.

Detention of witnesses by Stipendiary Magistrates.

72. The tabulated statement below shows that out of 36,295 witnesses examined in the year, 1,402, or 3·8 per cent., were detained over two days. The percentage for 1892 was 5·6. Individual offenders in this important matter have badly affected the general average. In Tippera, for instance, where all the Magistrates appear to have kept in view this part of their duty, the percentage was 9 only, while in Noakhali it was 6·5, because the percentage in the cases of Deputy Magistrates Akhay Kumar Bose and Avinas Chandra Mookerjea went up as high as 15·7 and 12·9 respectively. For the same reason the percentage in Chittagong is not as good as it should have been but for the dilatoriness of Babu Hridoy Nath Majumdar, *ex-officio* Deputy Magistrate, Cox's Bazar, whose percentage went up as high as 19·2. The percentage for Mr. J. T. Rankin, Assistant Magistrate, and Mr. D. N. Mukerji, Deputy Magistrate, at head-quarters, was also 13·5 and 13·1 respectively. The lowest percentage in the Division was ·45, a result obtained by Babu Hemendra Lal Kastagir, who examined 1,104 witnesses.

		Total number of witnesses examined.	Number detained above two days.	Percentage.
1		2	3	4
Tippera ...	1892 ...	17,919	460	2·5
	1893 ...	16,273	153	·9
Noakhali ...	1892 ...	8,666	697	8·03
	1893 ...	10,935	718	6·56
Chittagong ...	1892 ...	9,917	910	9·1
	1893 ...	9,087	531	5·8

73. The figures below show the action of the Honorary Magistrates. Of the 3,843 witnesses examined by them, 309, or 8·04 per cent, were detained over two days. Their percentage for the year before was 12·6. The Chittagong Bench shows marked improvement, the percentage dropping from 46·8 to 17·4. The percentage for Babu Nitya Nanda Roy, the only Honorary Magistrate who sits singly, is 3·4, which is creditable.

		Number of witnesses examined.	Number detained above two days.	Percentage.
1		2	3	4
Tippera ...	1892 ...	2,457	92	3·7
	1893 ...	2,763	142	5·1
Noakhali ...	1892 ...	571	54	9·4
	1893 ...	438	55	12·5
Chittagong ...	1892 ...	693	325	46·8
	1893 ...	642	112	17·4

Remands.

74. In Tippera and in Chittagong more than half the number of A cases were disposed at the first and second hearing, and in Noakhali a little less than half. The percentage of cases remanded six times and over dropped from 3·1 in 1892 to 2·3 in the year under report. In Tippera it was ·6 against 1·6. In Noakhali only one case was remanded six times, and the percentage was ·7 against 1·1, and in Chittagong the precentage was 4 against 5·01. Out of 22

cases disposed of, 5 cases were remanded more than five times by the *ex-officio* Deputy Magistrate at Cox's Bazar, and one Magistrate at head-quarters remanded 6 cases in this way out of 35 he tried. These high percentages have affected the district total.

Fines.

75. This branch of criminal work is sufficiently illustrated by the figures in the statement. The total demand, collection, and balance are very much the same as in 1892. The balances in Chittagong and in Tippera are comparatively heavy.

XVI.—REGISTRATION OF DEEDS.

76. The prescribed Statement XVII shows the details of the working of this department.

There was an increase in the number of registered deeds in Tippera and in Chittagong, and a slight falling off in Noakhali.

In Tippera there was a rise in the number of deeds of sale, mortgages, and leases, probably due to the distress in the district. For the same cause in Noakhali the number of deeds of sale registered is said to have increased.

In Chittagong the number of deeds increased because people whose lands had been taken by the Assam-Bengal Railway had to purchase land elsewhere before receipt of their compensation, and also on account of the growing confidence of the people in registration. The minimum *ad-valorem* fee was reduced during the year from 12 annas to 8 annas. This has affected prejudicially the receipts everywhere.

77. In Noakhali there was, in cases of optional registration, an increase of about 15 per cent., indicating the growing popularity of the system. Three new offices were opened there during the year, and four more have been proposed.

The Tippera offices had the lightest work. The largest number of deeds was registered at the Noakhali Special Sub-Registrar's office, and among rural offices those at Chittagong had the largest share of business. Two new rural offices have been proposed for the district.

In Tippera two persons were convicted for false statements and false personation before Sub-Registrars.

No other offences under the Act were reported as having come to light during the year.

The two matters calling for reform in the registration of deeds are, in my experience, (1) the impunity with which persons can avoid obedience to processes issued to secure their attendance to be examined by Sub-Registrars as to deeds alleged to have been executed by them, in many cases until the eight months has expired after the date of the deed. The procedure under the Code of Civil Procedure after summons has been ineffective is often not known, and no further action is taken. A criminal prosecution under section 174, Indian Penal Code, in all such cases would work a reform quickly. The other matter (2) is the way in which Sub-Registrars admit deeds presented more than four months after date of execution without any proof of "unadvoidable accident or urgent necessity" as laid down in the law.

XVII.—CONDITIONS OF THE DIVISION AS REGARDS LAND AND LAND REVENUE ADMINISTRATION.

78. Statement XVIII shows the position. Mr. Oldham says: "It was a bad year for Tippera and Noakhali. Collections must be bad in the Government estates, as they are mostly *chars* which felt both the floods and the cyclone. In *chars* Durwesh and Gazi the Collector of Noakhali had to stop pressing on collection, and reported this confidentially. The Board were informed. It was a very good one for Chittagong—high prices combined with a decent harvest." The figures showing the percentage of collections are—

	Tippera.	Noakhali.	Chittagong.
	Per cent.	Per cent.	Per cent.
1892-93	98·55	98·5	95·66
1893-94	96·90	96·46	96·28

79. Tippera and Noakhali failed to reach the standard prescribed for private and Government estates. The deficit is accounted for by the failure of crops and the loss of cattle caused by the floods and cyclone.

The balances at the end of the year are compared in the table below according to the classes prescribed by the Government Resolution on the Land Revenue Administration Report for 1890-91:—

	Balance in 1892-93.	Balance in 1893-94.	Percentage of balance in 1892-93.	Percentage of balance in 1893-94.
1	2	3	4	5
	Rs.	Rs.		
Class I ...	4,430	7,906	·22	·40
,, II ...	3,726	9,667	3·51	8·69
,, III ...	55,974	53,555	8·24	8·09
Total ...	64,130	71,128	2·35	2·63

Redemption of land revenue.

80. Only one estate with a revenue of annas 13-9 was redeemed in the district of Chittagong during the year by paying twenty-five times its annual revenue.

81. The system of payment of revenue and cesses by money-orders continues to develop, showing larger operations, and to work satisfactorily, as the following figures show:—

	Number of money-orders received.		Amount of revenue sent by money-orders.		Number of money-orders under reference or objection.	
	1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.
1	2	3	4	5	6	7
			Rs.	Rs.		
Tippera	2,422	2,670	55,208	51,431	49	...
Noakhali	686	913	3,406	4,472	...	...
Chittagong	24,862	25,904	1,09,863	1,11,673	221	...
Toal ...	27,970	29,487	1,68,477	1,67,576	270	...

The falling off in amount of money in Tippera was due to the extensive use of the money-orders by the proprietors of petty estates only, who have to pay small sums as revenue.

The following figures show the payment of rent by money-orders:—

	Number of orders.		Amount covered by them.		Number refused by landlords.	
	1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.
1	2	3	4	5	6	7
			Rs.	Rs.		
Tippera	792	1,224	14,294	18,643	306	347
Noakhali	1,701	1,278	23,478	18,950	445	343
Chittagong	6,517	4,587	20,477	23,136	...	...
Total ...	9,010	7,089	58,244	60,129	751	690

In spite of the large increase in the number of orders in Tippera, the percentage of refusals has fallen from 38 to 28. The Officiating Collector,

Mr. Carlyle, says it is probable that there will be a considerable increase in the number of money-orders sent, as it affords protection to tenants whose relations with their landlords are strained. In Noakhali landlords are said to refuse the remittances when tenants make mistakes in naming taluks or send rents without interest.

Working of the Sale Law.

82. Nine hundred and seventy-three estates or shares of estates became liable to sale, of which 315 were actually sold, 298 in Chittagong alone against 282 in 1892-93. One thousand nine hundred and sixteen tenures were brought to sale in Chittagong, of which 513 were sold. Three estates and 24 tenures were purchased by Government.

In Noakhali six tenures were sold against 11 the year before; two of these were purchased by Government.

In Tippera four estates were purchased by Government.

The number of estates or shares of estates sold in Tippera and Noakhali was 12 and 5 respectively.

The law seems to have been worked without over-severity in all districts of the Division.

There were 48 appeals to Commissioner against revenue sales during 1893-94, of which 5 were rejected and 19 dismissed. In 19 the sales were annulled and 5 were pending disposal at the close of the year.

Working of the Public Demand Recovery Act.

83. The following comparative statement shows the result of the working of the Act:—

	Cases instituted.			Cases disposed of.		
	1891-92.	1892-93.	1893-94.	1891-92.	1892-93.	1893-94.
1	2	3	4	5	6	7
Tippera	3,605	3,231	3,929	3,761	3,583	2,800
Noakhali	1,532	1,002	1,219	1,446	1,198	994
Chittagong	10,732	8,612	9,123	11,093	9,080	9,189
Total ...	15,869	12,845	14,271	16,240	13,861	12,983

The result of the year's work shows an increase in the number of institutions of from 12,826 in 1892-93 to 14,271 in 1893-94.

The increase has occurred in the classes, arrears of rent due to Government, rents due to the Court of Wards, and all other demands under section 7. The total amount covered by the certificates issued last year was Rs. 1,61,060, exclusive of demands for other districts. For 1892-93 the figures were Rs. 1,72,134. The consolidation of the department under recent orders has been taken in hand in all districts.

Road and Public Works cess.

84. The total collections amounted to Rs. 5,11,856 out of a demand of Rs. 5,69,742. The percentages attained by each district were—

	Arrear.	Current.
1. Tippera	87·8	83·4
2. Noakhali	84·81	93·25
3. Chittagong	96·59	91·50

Chittagong alone has attained or exceeded the standard of 90 per cent. on the arrear demand. The current collections in all the districts are below the prescribed standard of 95 per cent.

The short collections are mainly due to short crops, the result of heavy rainfall and floods.

Land Registration.

85. In Tippera 475 applications under section 42 were filed during the year against 587 the year before. The ratio of mutations to original registration was 4·1 per cent. against 5·11 in 1892-93. In Noakhali there were 456 cases against 503 the year before, and a ratio of 5·73 per cent. against 6·32.

In Chittagong the applications increased from 6,571 in 1892-93 to 6,861 in 1893-94, and the ratio from 3·9 per cent. to 4·1 in the year under report.

The department in Chittagong is very heavy, and is managed by two Sub-Deputy Collectors. Eleven thousand five hundred and two transfers were reported by Sub-Registrars and others, and Rs. 6,137-8 were inflicted as fines under section 65 of the Land Registration Act.

Survey and Settlement.

86. Important professional surveys are in progress in Chittagong throughout the district, and in some estates in Tippera and Noakhali. In Tippera four Government estates and six private estates were under survey and settlement. All the four Government estates, excepting one, viz., Gunanandi, are petty. The cadastral survey of Gupanandi has been completed. Of the remaining three Government estates, two are in an advanced state of progress, and in one rates have to be determined. Of the six private estates, survey and khanapuri have been completed in two. In one case the proceedings are in abeyance owing to objections raised by the raiyats to the published draft khatians which are under consideration. In the Palpara and Sonachar estates, measurement and khanapuri have been completed.

The survey and settlement of pargana Sarail were completed at a cost of Rs. 1,28,703 and Rs. 52,376 respectively. In this estate the new jamabandi has been strongly objected to, and it is being revised.

In the Roshnabad estate traverse survey has been completed. The cadastral survey and other work has been done in some villages. The cost incurred up to date is Rs. 69,871 for survey and Rs. 17,904 for settlement.

87. In Noakhali an aggregate of 5,165 acres was surveyed during the year at a cost of Rs. 1,047. The measurement of the four Government estates was completed during the year. A private estate, the area of which is 4,217 acres, was also surveyed during the year at a cost of Rs. 2,038, as also 304 acres of another private estate.

88. Mr. Oldham proposed to have the Government lands in char Toom Madhub, an island of Noakhali in the Bay, created a reserved forest. It has been waste and under jungle since the cyclone of 1876, though let for grazing, and its jungles contain a breed of tame cattle become wild, as well as wild pigs.

89. The demarcation and survey of the district of Chittagong was completed during the year. The areas surveyed was 34·31 square miles in Moiskhal and Teknaf. Besides this an area of 15·43 square miles of Sankholas was surveyed during the year at a cost of Rs. 1,735-11.

90. In Tippera 18 settlement cases were disposed of during the year. None of these presented anything worth mentioning. The cases were all petty. In Noakhali 38 cases were disposed of during the year, in 29 of which summary settlements were effected, 2 were struck off the file as the land was diluviated, 2 cases were transferred to Register 8 of miscellaneous cases, and in 6 regular settlements were conducted. These settlements resulted in an increase of revenue amounting to Rs. 3,887.

The attestation of the khatians and the recording of rents have commenced in the private estate char Parbaty. The settlement proceedings of chars Gazi and Fakira were conducted under the Tenancy Act. The final records of these estates were published during the year, and the proceedings have been nearly completed.

91. In Chittagong the record-writing in the field was completed during the year for all lands with the exception of Sankholas. The khanapuri of 22 villages containing 91,288 plots in Teknaf and Moiskhal was completed. Record-writing in office has also been completed. Attestation had been completed in 641 villages previous to the year under report, and was done in 386 villages during the year, and only 3 villages in Moiskhal remained to be done out of the total of 1,030 villages. The "mahal milan" has been completed in Ramu and Juldi circles, and is making progress in the other circles. Out of the 1,030 villages surveyed, this work had been completed in 282 villages up to the close of the year. Assessment had been completed in Ramu, practically completed in Juldi, and was making progress in the other circles. The total number of tenants for whom fair rents had been settled was 43,456 out of the estimated total of 120,000.

The records of 44 out of 50 villages in Ramu were finally published before the 12th April, so that the new rents might come into force from the commencement of the current agricultural year. The cost of settlement was

Rs. 1,56,757-13-7 against an stimate of Rs. 1,74,532-8, showing a saving of Rs. 17,774-10-5.

XVIII.—WARDS' AND ATTACHED ESTATES.

92. There is no attached estate in this Division. The total number of wards' estates is 15, which was the number also in the previous year—12 in Chittagong and 3 in Noakhali. The total current demand of rent and cesses due to these estates is Rs. 3,74,181, of which Rs. 3,15,159, or 84·2 per cent., was collected during the year. The total collections, both current and arrear, amounted to Rs. 3,70,354, or 74·9 per cent., against Rs. 4,08,184, or 77·4 per cent., the year before.

Mr. Oldham says he would repeat as to Chittagong and as to the Panamia Trust in Noakhali what he wrote last year, viz., of the latter:—"Its management is, because it is compact, entirely satisfactory, and its objects are carried out without a hitch. In Chittagong several improvements were found possible and were effected. The most prominent were the erection and maintenance of sea-dykes, construction of roads, the excavation of tanks, and some agricultural experiments. Chittagong has more wards' estates than any district in the Province, and their component parts lie throughout the length and breadth of the district. The cost of management is high in some estates. This is solely because of the state in which they came on our hands and the fact that they have only so come recently. In all the older estates the cost is very low, and it is to be remembered that not one of these estates has been taken charge of to save the Government revenue. We have them in charge solely for the sake of the proprietors. Considering the amount of administration they involve, the cost is marvellously small.

"My sense of dissatisfaction with the state of the three estates in Noakhali has grown each year of my connection with them.

"For Girinda Chandra Mazumdar's estate we framed a liquidation scheme last year. With the utmost parsimony, bare subsistence for the family, nothing done for the tenantry, and no disturbance, the estate would be clear of debts in 13 years. The cyclone of October last has knocked this scheme to pieces. This is the most unsatisfactory of the estates

"In Bhubanjoy Saha's estate, the old proprietor, who is very well off, sits still while we collect his rents for him and make over to him the profits. He used, moreover, to constantly interfere, and I have had proposals for us to do *mahajani* for him, or to buy in estates in which it was an object for us to default as regards his share *benami*. This, I think, has been stopped, as the estate consists of bits and shares, from shares of interest in mere tenancies to shares of taluks. Nothing for its benefit can be done." It was a mistaken piece of kindness on the part of the late Mr. Barua, while Officiating Collector, taking over the management of this estate. I recollect succeeding him in 1885 at Noakhali, and finding Government let in for carrying on a low money-lending and shop-keeping business with land, including fractional shares of raiyati holdings, &c., &c., and a shamefully false rent-roll. It seems to be but little better now.

Mr. Oldham continues: "Worst of all is the Courjon estate. We have had it now for over 20 years, and beyond some paltry subscriptions have done nothing for the tenantry, while we have been rigorous rent receivers and enhancers. The large amount of claims written off in my time showed in detail how freely and carelessly certificates used to be issued. The excuse for this system is that it came to us with a debt of Rs. 1,25,000, which was fully cleared last year. This debt was absolutely personal, and had nothing to do with the maintenance of the estate or the tenantry. I represented at the same time that at least one portion of the estate in which the operation was practicable at an estimated cost of Rs. 6,000 should undergo a survey and settlement. No reply has been yet received. In this estate the issue of certificates and the process of screwing up the rents, called by the manager applying the prevailing rates, has to be vigilantly watched, and the Collector is now fully alive to this."

93. I had knowledge of this estate also as Collector of Noakhali in 1885—87. I think with Mr. Oldham that both it and Bhubanjoy Shaha's estate might be properly given up.

TRAINING OF YOUNG CIVILIANS IN SURVEY AND SETTLEMENT WORK.

94. In Chittagong Mr. Stevenson-Moore, Joint-Magistrate and Deputy Collector, did some khanapuri near head-quarters, and visited the settlement office to learn to extract areas. He also did some khanapuri in Sitakunda while he was in charge of the *mela* there. In the middle of March he accompanied the Director of Land Records and Settlement Officers while they inspected the office of the Assistant Settlement Officer at Fatikchari. He was out for 12 days on survey and settlement work. Mr. Assistant Collector J. T. Rankin was out for four days and attended the Assistant Settlement Officer's camp at Nhila, where he learnt the khanapuri and attestation work. He did the khanapuri of certain plots of lands and wrote out the khasra and khatian for them. Assistant Magistrate Mr. Kiran Chandra De was out for 55 days. He was employed in the khanapuri of a village the khasra of which has nearly been completed. There were no young Civilians employed in Tippera and Noakhali.

XIX.—EXCISE.

95. From year to year the excise revenue fluctuates for causes which at times are ascertained with tolerable accuracy and at others are somewhat unaccountable. For instance, in view of the general distress in Tippera and Noakhali, no one would have expected an improvement in the revenue from excise; and yet, contrary to all expectations, there was an increase of about Rs. 7,000 in Tippera and of over Rs. 1,000 in Noakhali. The explanations given are more or less stereotyped and do not correctly elucidate the phenomenon. In Chittagong, which was to a great extent free from the calamities that visited Tippera and Noakhali, the revenue decreased by over Rs. 10,000. The introduction of contraband opium is the correct explanation of the decrease of revenue under the head opium. But there was not any considerable increase under any other heads. Country spirits, for instance, showed an improvement of Rs. 244 only, though the Assam-Bengal Railway coolies must have caused an increased demand for liquor. Increased duty on ganja accounts for increased revenue under that head in all the districts. Very little can be expected from the new system of tari excise in this Division. In Chittagong the revenue doubled itself last year, but the original revenue was only about a thousand. There is no taste for tari here, and the revenue therefore cannot ever exceed a few thousand rupees.

96. There was not much detection work done in the district. The police in Chittagong detected a man with seven seers of contraband opium.

In Tippera five cases of smuggling of liquor and ganja from Hill Tippera were detected.

Revenue derived from sale of stamps.

	Non-judicial stamp.		Court-fee stamp.		Total of both kinds of stamps.			
	1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.	Increase.	Decrease.
1	2	3	4	5	6	7	8	9
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Tippera	1,20,971	1,22,677	4,16,316	4,07,046	5,37,287	5,29,723	...	7,564
Noakhali ...	79,541	75,976	2,51,558	2,57,937	3,31,099	3,33,913	2,814	...
Chittagong ...	1,10,707	1,14,626	3,49,726	3,64,515	4,60,433	4,79,141	18,708	...
Total ...	3,11,219	3,13,279	10,17,600	10,29,498	13,28,819	13,42,777	Net 13,958	...

XX—STAMPS.

97. The table annexed shows the fluctuations of revenue under this head with prominent details. The falling off under judicial stamps in Tippera has not been sufficiently explained. It has been surmised that an accumulation of these stamps remaining in the vendor's hands at the end of the previous year told prejudicially upon the sale of court-fees during the year under report. This explanation is admittedly a guess, and the matter requires further enquiry.

In Noakhali the decrease in the sale of non-judicial stamps is said to have been the result of a falling off in the number of perpetual and other leases and bonds executed on account of the general destitution of the people after the cyclone and bad harvests, while the very same cause is said to have stimulated the sale of court-fee stamps, owing to the institution of a larger number of rent suits caused by the raiyats' impecuniosity.

The increase in Chittagong only followed the previous normal course of development of this branch of revenue.

98. There were 25 prosecutions under the Stamp Law, against 20 the year before. Of these 14 took place in Tippera. It appears that intentional evasions are not always followed by prosecutions. Civil courts impounded 928 documents against 734 in 1892-93, and revenue officers 2,577 against 1,935 the year before. These figures indicate probably more careful scrutiny on the part of Government officers than any increase in disregard of the stamp laws by the people.

XXI.—INCOME-TAX.

99. The administrative details of the tax are given below.

The receipts increased by Rs. 5,557, all the districts contributing, but chiefly Tippera. The increase was chiefly under the head "Tax on salaries," due to the number of employés on the Assam-Bengal Railway. The number of assessees in consequence increased from 5,164 to 5,222. This will be temporary. The development of revenue from other sources of income was retarded by short crops everywhere, floods in Tippera, and the cyclone in Noakhali.

The number of objections dropped from 499 to 422, Noakhali showing bad results in this respect. One hundred and fifty-one of these objections were successful. Fewer warrants had to be issued everywhere except at Noakhali, where the distress caused by the damage done by the cyclone resulted in non-payment in time.

There was only the small balance of Rs. 350 outstanding under all heads against a gross collection of Rs. 1,02,624. The tax was for the most part assessed and collected without friction or annoyance.

XXII.—MONETARY ARRANGEMENTS.

100. Monetary transactions were carried on by means of money-orders, currency notes, remittance transfer receipts, supply bills and cash. Hundis are very rarely used. The Chittagong Treasury received currency notes worth Rs. 3,51,525, and with the balance in hand at the beginning of the year issued Rs. 3,54,630 worth. In Tippera the receipts and issues were Rs. 2,42,750 and Rs. 2,48,230. In Noakhali the transactions in notes were limited.

The Chittagong Treasury did not receive any remittance from any treasury during the year, and it had to remit Rs. 7,00,000 to Akyab. It issued to the public Rs. 48,802 worth of small silver coins, and Rs. 14,211 worth of copper coins, and it paid Rs. 56,000 on supply bills and telegraphic money-orders and Rs. 40,481-15-11 on remittance transfer receipts.

These details show the comparative magnitude of monetary operations in Chittagong.

The Tippera Treasury received over forty-three lakhs and disbursed about the same amount. The receipts in Noakhali were over twenty-seven lakhs, and over thirteen lakhs were remitted to Dacca. Supply bills for Rs. 1,35,900 were issued there chiefly to the Bhuluah zamindars. The limit of the amount having been raised from Rs. 600 to Rs. 2,000, it is reported traders do not generally come forward for these bills. The demand for half pice still continues there.

XXIII.—RAILWAYS AND OTHER PUBLIC WORKS.

101. I quote the following from Mr. Oldham's note:—"The bank is three parts finished. The Engineers are sanguine that if all goes well the permanent-way, except for the two big bridges, will be finished in this Division by the end of next working season."

There was a serious riot in Tippera in July, due to the Railway taking up homestead lands. In that district these lands are so scarce that a good deal of hardship has been caused by this. The Agent has been very considerate, and has given way and diverted wherever it was possible for him to do so. In other places, particularly in Noakhali, disturbances have also been threatened and were averted by the tact and patience of the Executive Engineer, Mr. Brounger. The chief cause was delay in paying compensation, and it arose from the zamindar's reluctance to come to terms and the impossibility meanwhile of making them with the tenants, who in Maharaja Durga Charan Law's estates have all permanent leases.

In Tippera there was an uneasy feeling that sufficient waterway had not been provided by the Railway Company for the flow of the surface drainage across the line. At places the raiyats would, it came to the Magistrate's ears, if the necessity should arise, cut a passage for the flood water through the embankment. Professional opinion, however, was obtained that there was no ground for anxiety, and nothing further has been heard about the matter.

102. As regards the commercial prospects of the line, Mr. Oldham says that he does not hesitate to record that his views are the same as those expressed by Mr. Cotton in 1884, in contrast with the sanguine views taken by the Bengal Government, and subsequently by his predecessor. Mr. Cotton's alternative of steamer communication with Narayanganj, he says, is not practicable. The Navigation Companies have tried it again and again, and are not able to devise a steamer of any size which would at the same time be fit for the sea passage and have a draught light enough for the river channels.

103. In Chittagong a ballast train has already begun to run about four miles of the way, and will, it is said, run about 24 miles in a few months. The construction of houses for the railway officials and of worskops has begun. The railway officials' quarters will add a small suburb to Chittagong.

The construction of the road was delayed owing to very heavy and continued rain during the first week of March. The work of land acquisition was also tardy owing to various causes. The land along the Karnafuli for the Port line being covered with houses, has taken the Deputy Collector a long time, and the delay was causing the Railway Company loss and inconvenience, which gave rise to growing impatience at the end of March.

104. The only public buildings of importance completed during the year were the District Board's office and the Faizanessa Hospital at Comilla. Several of the thatched court-houses in Noakhali which had been blown down during the cyclone, were reconstructed.

XXIV.—COMMUNICATIONS.

105. Very little was done in extending road communication during the year, except in the way of making petty village roads. The resources of the local bodies were directed chiefly to the maintenance, metalling, and bridging of existing roads, and the making of masonry causeways.

In Chittagong three costly bridges were put up on three important roads, and two wooden bridges in Noakhali. Three miles of the important road from Chittagong to Rangamati near the boundary of the Hill Tracts had been almost wholly neglected, and the omission caused much dissatisfaction, especially as the other portions of the road had been kept in excellent order and the gap near the Hill Tracts broke the continuity of an otherwise excellent line of communication. It was ruled during the year that the Arakan authorities should pay the Chittagong District Board one-fourth of the income of the Ukhia and Mangdo ferries for the maintenance of the roads leading to them from the Chittagong side.

In Tippera the daily steamer service between Daudkandi and Narayanganj was given up in August last, and a line between Maniknagar and Brahmanbaria was started in its place, and the daily cart service between

Comilla and Daudkandi was in consequence transferred to the new line. The steamer service between Noakhali and Barisal was maintained thrice weekly, the District Board paying the Steamer Company a monthly subsidy of Rs. 200. Communication by steamer with the islands of Hatiya and of Sandwip off the Noakhali coast has not yet been established for want of funds. It is much needed.

Planting of trees on road-sides.

106. In Tippera nothing was done in the way of planting new trees, and it cost Rs. 1,704 to maintain the trees already planted.

In Noakhali about three miles of road were planted with new trees, some of the plants being brought from the Botanic Garden at Sibpur. Rupees 917 were spent on this, and Rs. 1,196 on the maintenance of trees already planted. The cyclone did considerable damage to the trees along the roads everywhere.

In Chittagong the maintenance of old trees cost Rs. 1,227, and there was no new plantation.

XXV.—WORKING OF THE LODGING-HOUSE ACT.

107. This Act is in force only at Sitakund in Chittagong. Owing to the weather the attendance at the *mela* last year was below the average. The usual arrangements were made by the Magistrate, and there was no cause for complaint for house room or sanitary precautions. The improvement of the water-supply of the place is still receiving attention. It is proposed to start a dispensary there with an Assistant Surgeon, who will then be available as Health Officer during the *mela*. There was only one case of cholera among the pilgrims last year.

The fund at the close of the year stood at Rs. 6,534-6-4.

XXVI.—EDUCATION.

108. Some of the prominent details in connection with this department are that over four lakhs were spent on education, 5,379 schools were maintained, and 135,670 pupils were taught last year. The decrease of over a thousand schools is due chiefly to the exclusion from the Noakhali return of the Musalman schools known as maktabs, which numbered 1,054 in 1892-93.

Tippera, as reported in previous years, still takes the lead. More than half the number of schools in the Division is maintained there, and about two lakhs of rupees are expended there on education. The District Board gives liberal aid, expending over Rs. 30,000, against Rs. 26,201 spent in Noakhali, and only Rs, 14,846 in Chittagong. On primary education Tippera spends about Rs. 23,000, against only Rs. 5,155 devoted by the Chittagong District Board to an object of such great importance.

Noakhali in this respect is by no means behind hand. The District Board there very liberally spent over Rs. 21,000 on primary education. The percentage of boys of school-going age receiving education is 43·1 for the Division, Tippera being represented by 40·5, Noakhali by 43·2, Chittagong by 38·6 per cent.; the half-civilised Chittagong Hill Tracts bring up the rear with a percentage of 6·1 only. Each pupil in the Division costs Rs. 2-9, the

Rs.

being

109. Coming now to details, it appears that in Tippera one additional high English school was started at Sarail and some of the middle class English schools were reduced to vernacular schools. There was thus four English schools of the middle class less than three vernacular schools more.

The zila school, it is reported, maintains its reputation, though its success at the last two Entrance examinations was not so brilliant as a previous year. The Victoria School, a private institution, is becoming its rival.

The middle class schools, it is reported, were not very successful during the year. The floods compelled many of the schools to close shortly before the annual examinations, and the results were not satisfactory.

The floods and high prices are reported to have affected prejudicially the primary schools, causing a decrease of 317 schools with 8,076 pupils.

Each upper primary school had on an average 35 pupils costing Rs. 112 per year, Rs. 39 of which was borne by public funds. The lower primaries are subsidized by rewards given on results. The allotment, however, being exceeded by the rate, had to be reduced to 2 annas in the rupee. Each lower primary had on an average 20·5 pupils costing Rs. 49 per year, of which Rs. 6 was paid from public funds. The results of examinations were not very successful.

Female education is represented by the Faizunessa High Class Girls' School at Comilla. There was a noticeable reduction in this branch of education, resulting in a decrease of 56 schools with about 200 pupils. Still 6,447 girls received instruction during the year. Three girls passed the upper primary, one carrying away a scholarship, while 22 passed the lower primary, of whom one was a Muhammadan, five getting scholarships.

The building of the Elliott Artizan School was completed at a cost of Rs. 3,163, the Maharaja of Hill Tippera and Maharaj Kumar Benoy Krishna of Calcutta bearing more than half the charges. There were 29 pupils against 34 the year before, 5 of whom received certificates of proficiency.

110. In Noakhali the number of high schools remained stationary. Middle English schools increased from 8 to 11, and middle vernacular from 37 to 38. A great falling off is observable in the lower primary schools, the number dropping from 1,225 to 1,185. It is reported that the high prices of food and the cyclone of October last are answerable for this. The children of the poorer classes were detained for work, and several of the pupils and gurus died of cholera that followed the cyclone.

The zilla school at the last entrance examination passed 11 out of 12 candidates sent up, and the Private Jubilee School 7 out of 10.

The results of the middle English and vernacular schools are fairly good; 36 and 83 passed respectively out of 45 and 114 sent up.

The number of pupils on an average at the upper primary schools was 35 and 21 at the lower. They were maintained by monthly stipends and rewards given on results. The percentage of success at the examination was 65·8 for the upper and 48·5 for the lower primary schools.

The number of girls' schools fell from 59 to 48 during the year, and only 3,657 girls received instruction against 5,441 the year before. One girl passed the upper primary examination and six the lower. The District Board have granted two scholarships to the girls for the encouragement of other girls to qualify.

The technical school at Noakhali shown in the return has been closed from the beginning of the current year. The average attendance was only two or three. The Board very rightly closed the school, and have instead awarded two scholarships of Rs. 10 each, tenable at the Sibpur Engineering College for five years by two natives of the district. Muhammadan education in this district is progressing favourably. It is doubtful whether the Koran schools, which have increased from 1,054 to 1,116, impart any education in the sense in which the word is generally understood. But the results in the recognized schools indicate gradual improvement. It is reported that three-fourths of the pupils of the Division are Muhammadans. Out of 83 who passed the middle vernacular examination, 33 are Muhammadans. Their number at the upper and lower primary examinations was 74 and 333 respectively, out of 245 and 607 passed.

There was a proposal to encourage Sanskrit learning in Noakhali by subsidizing tols. This was negatived by Mr. Oldham, on the ground that the encouragement of the study of Sanskrit in a purely Muhammadan district would have been a misuse of the public money.

111. In Chittagong there was no fluctuation in the number of high and middle class schools. But the success of their pupils at the examinations was far from creditable. Out of 93 candidates at the entrance examination, only 24 passed, and out of 242 who appeared at the middle scholarship examination, only 134 passed. Primary education, however, is gaining ground, and is being gradually diffused more widely. There was an increase of 108 to the number of schools. But still even this is very much behind Tippera. The system of maintaining these schools is the same as in the other districts.

One thousand four hundred and thirty-eight pupils went up for the examination and 733 passed.

Female education also shows a slight improvement. Thirty-one against 25 schools the year before were maintained, and 2,528 girls were taught. Twenty-two girls passed the prescribed examination. The special schools in the district are the Normal School for training vernacular teachers, three guru-training schools, and six Madrassas. Two of the last are maintained by Government, one at Chittagong and the other at Cox's Bazar.

The proposal for closing the Normal School has been negatived, and a new site for the College Boarding School has been sanctioned. The superannuation of the Superintendent of the Chittagong Madrassa came prominently to notice during the year, and my predecessor, as President of the Madrassa Committee, had many occasions for dissatisfaction, and has left the following record:—

"The unsatisfactory state of the Chittagong Madrassa has been under notice for some time, and I had begun communication with the Director of Public Instruction about it, and to suggest that the Superintendent, who is considerably past 55, should be superannuated. This is the opinion of the Muhammadan community, and I have had much evidence of his inability to carry on his duties. His health is bad. The institution recently has been far from successful. Though the Commissioner is President of the Local Committee, he, on it, can exercise practically no control, and I cannot recall an instance in which the Committee's recommendations have been followed."

The following details show the state of Muhammadan education in the district. The percentage of pupils of this class is 58. Three of them passed the entrance examination, 19 middle, 39 upper primary, and 180 lower primary examinations. In my report I have not included the Koran and other indigenous schools which swarm in the district, not so much to provide secular as religious instruction.

XXVII.—DISPENSARIES AND HOSPITALS.

112. Tippera under the initiative taken by Mr. Greer still takes the lead in this department. The District Board there spent 7·4 per cent. of its income in maintaining these good institutions, while Noakahli and Chittagong devoted only 2·8 per cent. to this purpose. There has been an awakening, however. Noakhali and Chittagong have each started a new dispensary, the former after the close of the year, and in the latter it is proposed to start two more.

In Tippera 4·8 per cent. of the population obtained relief, while the percentage for Noakhali and Chittagong was 1·9 and 2·9 respectively.

In Chittagong there was much opposition to the scheme for erecting a central hospital on the Rangmahal Hill from funds partly contributed by the municipality and by the District Board. The rate-payers and others impugned the wisdom of the proposal on the score of reckless extravagance, and sent up memorials against it to Government. After enquiry as to the objections raised, the scheme has been sanctioned, and it only remains for the estimates and plans to be sanctioned to begin the work. In Tippera the Faizunnessa Hospital has been completed and furnished, and will shortly be in working order.

Sixteen dispensaries were maintained in the year in Tippera, 13 of these receiving support from the District Board. The Comilla and the subdivisional dispensaries receive indoor patients. The number treated, however, is comparatively small, being only 351 out of a total number of 86,657 patients.

The Chandpur dispensary received over Rs. 400 private subscription for its support, against only Rs. 10 the year before.

113. In Noakhali the dispensary at Fenny began to receive indoor patients during the year. Both the Fenny and the Harispur dispensaries were badly damaged by the cyclone, and there was considerable expenditure on repairs. The Hatia dispensary is gaining in popularity, standing second in the district, while the Dalal Bazar dispensary, maintained entirely by private charity, is deteriorating. This is to be regretted.

114. The Chittagong District Board liberally subsidizes six dispensaries, which are reported to be very popular.

The Maghs, who are averse to the English method of treatment, are said to be getting over their prejudice and to have attended the Cox's Bazar dispensary in larger numbers than before.

XXVIII.—LIBRARIES.

115. The Birchandra Public Library at Comilla is the only institution of the kind in this Division. It is administered by a managing committee of which the District Magistrate is the Chairman. It is maintained by subscriptions, and has got a reserve fund of Rs. 2,000.

XXIX.—MUSEUMS.

116. There are no museums in this Division.

XXX.—LOCAL SELF-GOVERNMENT INSTITUTIONS.

117. An election of Municipal Commissioners took place in all the districts during the year, and was attended with much interest everywhere, and with some excitement at Brahmanbaria. There is not much to be added to the remarks made in previous reports as regards the working of municipal bodies. So far as their means allowed, and according to their lights, they have tried to do useful work. In Chittagong they have asked for a loan of Rs. 45,000 to erect a commodious public hospital on a salubrious site in the town, conjointly with the District Boards, the Port Commissioners also contributing.

In Tippera they propose to undertake an extensive drainage scheme, which will cost about Rs. 50,000. Noakhali, with its small income of about Rs. 5,000, spent about Rs. 3,000 on improving the sanitation of the town. But, as may be supposed, there is still much to be done. The scavenging and conservancy of the towns require considerable improvement. Commenting on the defective drainage of the town, the Magistrate of Noakhali writes:—"I must say the Municipal Commissioners have not the courage of their convictions, and do not choose to risk unpopularity by enhancing the incidence of taxation." This remark applies with more or less qualification to many other municipalities besides that of Noakhali.

The survey of Chittagong Municipality was completed during the year by the Settlement Officer, and the question of apportionment of the expenditure is under discussion. My predecessor, Mr. Oldham, inspected the Chittagong Municipal Office, and was able to submit a satisfactory account to Government.

District Boards.

118. The District and the Local Boards continue to maintain their reputation. They have worked satisfactorily, but have failed to carry out the wishes of Government in some matters. The District Engineers, notwithstanding the strain put on them by the transfer of the Public Works charge, have generally done good service; but in Chittagong Mr. Oldham says a portion of an important provincial road was neglected. The following table shows the prominent details of District Board administration:—

District Boards.	Income.	Cost of establishment.	Percentage.	Amount spent on—	
				Education.	Public works.
1	2	3	4	5	6
	Rs.	Rs.		Rs.	Rs.
Tippera ...	1,77,409	17,067	9·6	44,833	72,932
Noakhali ...	1,40,012	15,783	11·2	29,021	89,952
Chittagong ...	2,12,300	29,326	13·8	22,903	65,005

The high percentage of establishment charges is a feature calling for the attention of the Chittagong District Board. Tippera is comparatively the most economical, though it spends most liberally on education and the medical needs of the district. Chittagong has begun to try to follow its example, but (it must be said) at a long distance behind.

XXXI.—EMPLOYMENT OF MUHAMMADANS.

119. Appended statement XXXII gives details of the distribution of Muhammadan officers and menials in the different offices. The matter of giving them due encouragement has not been lost sight of. The Collector of Tippera writes that competent Muhammadan candidates are not always forthcoming.

XXXII.—POST OFFICE AND TELEGRAPH.

120. As usual, these institutions enjoyed the unbounded confidence of the public. The development of the banking business of the Postal Department may be estimated from the fact that in a small district like Noakhali money-orders covering Rs. 11,52,301 were issued during the year.

XXXIII.—ZAMINDARI DAK.

121. The Postal Department has the sole management of this department, and there was no change in the year under report.

122. The important fairs in the Division are the Sitakund fair, held in February on the occasion of the Shivaratri festival; the Mahamuni fair, where the hill people come in numbers, held in April; and the Panchpukuria fair held in October in the district of Tippera. The last has usually the largest gathering of about 10,000 people. All of them passed off well, without any outbreak of disease or any outrageous crime being committed.

Fairs.

123. The figures showing the administration of the pounds are given below. There was a falling off in revenue in all the districts, but chiefly in Tippera, where, owing to a heavy mortality among cattle after the floods, a large amount had to be remitted.

Pounds.

In Noahali, however, which suffered from the effects of inundation and the cyclone of October as well, the decrease is almost inappreciable, and it is reported that the percentage of collection of rent was above 98.

In Chittagong some petty pounds had to be closed, and the revenue decreased.

Pounds.

District.	Number of pounds.		Income.		Expenditure.	
	1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.
1	2	3	4	5	6	7
			Rs	Rs.	Rs.	Rs.
Tippera	123	119	12,484	9,810	1,061	738
Noakhali	80	89	7,522	7,435	469	34
Chittagong ...	80	76	6,314	5,801	314	445

XXXIV.—SOCIAL AND POLITICAL INSTITUTIONS.

124. The political institutions are those reported last year. In Chittagong the United Schools Athletic Institution was started during the year to create and improve a taste for physical exercise among students. Foot-ball is the game it patronizes most. Exciting tournaments were held between the students of the different schools in the town, and the prizes were given away by my predecessor, Mr. Oldham. The Purity Association held one or two meetings to discuss temperance subjects.

The Islam Association in Chittagong met once to welcome two maulvis who had been converted from Christianity.

In Tippera the People's Association met once to protest against the proposed transfer of the Chittagong Division to Assam. These are the only outward signs of life the associations exhibited during the year. They did not exhibit much energy or enthusiasm.

The Oldham Institute and a similar institution in Tippera, are a sort of club intended to offer recreation in the shape of games and light reading to

native gentlemen after the day's work is done, and in this they have been successful and are appreciated.

STATE OF PUBLIC FEELING AND THE PUBLIC PRESS.

125. Public feeling, that is, feeling common to any large section of native society, hardly exists.

Politics proper are seldom discussed or criticized, but local topics sometimes create a temporary agitation. The proposal to transfer this Division to Assam, though only a small part of the population realized what it meant, began to cause a ferment of objection which, however, the shelving of the project for the present brought to an end.

The survey and settlement operations going on in Chittagong have ceased to excite any lively interest. They have come to be taken as a matter of course.

The proposal to erect a central hospital on the Rungmahal Hill, evoked some discussion and one or two memorials to Government protesting against the municipality raising money on loan for the project.

In Tippera an increase in the amount of the chaukidari tax and the question of providing sufficient waterway in constructing the Assam-Bengal Railway, created some local dissatisfaction. The lattter, on the Collector's report, I brought to the notice of Government, with the result that the Consulting Engineer for State Railways for Assam declared that the waterway provided would be ample.

In Noakhali arm-to-arm vaccination and the realization of the vaccination fees—the latter especially—was opposed with some obstinacy by the orthodox Ferazis of the district. The Deputy Sanitary Commissioner proposed to me to get the Government to make vaccination compulsory ; but I declined, until it was shown that all other methods had been tried in vain.

The remarks in last year's report of my predecessor, Mr. Oldham, on the state of the relations of the people of this Division with the Agents of Government, may again be referred to. The Chittagong district exhibits the characteristics described most strongly, owing perhaps to some degree to the large number of small land-owners. Peasant proprietorship is to be found in the Chittagong district widespread.

The mass of the middle and lower classes of Noakhali are Ferazi Musalmans, and morally furnish a striking resemblance to the Pharisees of Judea in the first half of the first century.

In Brahmanbaria a Bengali newspaper called *Usha* was started during the year. It gives the local news and discusses social and religious matters. The *Sansodhini* in Chittagong appears by fits and starts, and carries no weight whatever in public estimation. Calcutta papers freely circulate in the Division. Those most in favour are the *Bangabasi* and the *Sanjivani*.

XXXV.—SUBORDINATE EXECUTIVE ESTABLISHMENT AND CHARACTER OF OFFICERS.

126. The information has been given in the prescribed statement.

XXXVI.—CONDUCT OF ZAMINDARS.

127. In Tippera some of the absentee zamindars gave trouble, and a special police force had to be quartered to keep the peace in certain localities on their estates. The Maharaja of Hill Tippera, the Dacca Nawabs, and the zamindar of Ganga Mandal, Maharaj Kumar Benoy Krishna Dev Bahadur, gave liberally to meet the distress caused by the floods of August last, and the acknowledgments of Government were notified in the official Gazette. Nawab Faizunnessa Saheba of Tippera has maintained her reputation as a liberal and public-spirited lady. In Noakhali the great zamindars are absentees, and their relations with their tenants were not always satisfactory. About the local landholders the Collector writes: "As a class they are extremely uneducated and unenlightened. They do not display the least public spirit, and are perfectly indifferent to the well-being of the district."

XXXVII.—GENERAL REMARKS.

128. Damage to crops by flood and storms caused a fall from the usual standard of prosperity among the masses. Rice, instead of being available for export, had to be imported, a good deal coming from Burma. Prices of food-grains were high, and there was a fall in export of country produce from Chittagong.

Crime generally decreased excepting in Noakhali, where petty thefts increased considerably, owing to the scarcity prevailing. Progress was made but slowly in the construction of the Assam-Bengal Railway.

A redistribution of the police force was made to carry out the investigating centre system. The amended Village Chaukidari Act seems to promise good results. The Chaukidari Reward Fund was started in all the regulation districts. Honorary Magistrates did a large amount of work in court satisfactorily. The revenue was collected with fair punctuality, the losses of the raiyats considered. The salo law was enforced with moderation. The survey and settlement in Chittagong made good progress towards completion. The income-tax receipts increased owing to the tax paid by employés of the Assam-Bengal Railway. The municipal elections took place quietly.

Having taken charge of the Division at the end of February, I have not been able to report from personal experience.

XXXVIII.—POLITICAL SECTION.

129. The political charge of the Commissioner of this Division comprised the South Lushai Hills, Chittagong Hill Tracts, and Hill Tippera.

I.—THE SOUTH LUSHAI HILLS.

A separate report on the administration of the South Lushai Hills has been submitted, and it will suffice to say here that peace prevailed throughout the district and the full amount of tribute due was collected without much difficulty and that expenditure was reduced considerably. To effect further economy a civil police force 86 strong for Demagri was started, and a contract was entered into for the transport of rations to Lungleh and beyond. The heavy rainfall of 1893 injured the Barkal tramway, and it was not put in proper order again till December, which delayed transport of rations at that point, and unusual and severe rain and storm in the first week in March seriously delayed the transport of rations from Demagri to Lungleh, and caused much loss to the contractor. During the year there was broached a proposal to transfer the South Lushai Hills to Assam, but this, for financial considerations, was put off till by the completion of the Assam-Bengal Railway through communication should be established between Assam and Chittagong, and this whole Division be annexed to the Chief Commissionership. Other notable occurrences of the year were the capture of the absconding recalcitrant Chief Longcheyva and the capture and deportation to the Chittagong Jail of the Lushai Chieftainess Ropui Lieni and of her son Lalthuama, thus eradicating two possible sources of disturbance in the future. A number of Lushais were allowed to visit Demagri, and some went as far as Rangamati to trade under passes granted by the Superintendent. Enquiry brought to light the fact that mismanagement has brought to an end the supply of caoutchouc from the Lushai Hills.

II.—THE CHITTAGONG HILL TRACTS.

130. In previous reports the peculiar character of the administration of this hilly tract, the nature and habits of the people, their institutions, and the resources of this portion of my charge, have been described. The present report records the progress that has been made in the development of the country and its people by the gradual extension of the operation of the rules of 1892.

Mr. C. S. Murray, C.I.E., was in charge from April to June and again from the 8th November to the close of the year, Mr. Cave-Browne, Assistant Superintendent of Police, acting for him in the interval in addition to his own duties as Assistant in charge of the Bohmong's Circle.

The former was on tour for 84 days, inspecting police-stations, schools, dispensaries, the Bohmong's circle office, holding conference with the local Chiefs, and explaining to them the new mauza system, and examining the progress of plough cultivation and the new jamabandis. Mr. Cave-Browne was out for 101 days visiting plough lots, making assessments and collections in the mauzas, holding sales of sun-grass, Gurjan kholas and fishery lots, and inspecting police stations in his jurisdiction.

Weather and crops.

131. The rainfall was very heavy both in the beginning and towards the close of the year, and its effect upon the crops was very injurious. The outturn of paddy, cotton, oilseeds, and sugarcane was consequently scanty; that of tea was very much the same as in 1892-93. Scarcity was felt as the year was closing in, and applications for relief were received from different quarters, which the local Chiefs were told to deal with. It was proposed to the men to go and work as coolies in the South Lushai Hills, but to this they would not consent, being naturally averse to leave their jooms and subject themselves to methodical labour. Considerable damage to crops was done in the Bohmong's circle by wild elephants.

Emigration and immigration.

132. Nomads as the hillmen are by nature, marriage, search for joom land, desire to join friends and relatives as well as to avoid debts and liabilities, are the principal causes of emigration.

There was much less emigration during the year to Arakan, Hill Tippera, and Chittagong than in 1892-93. There were also, as usual, inter-tribal movements. The grass farms or "sankholas" are said to have been injured by neglect on the part of the lessees by the year. I have directed their letting for terms of three years as an experiment to remedy this.

Prices of food and labour.

133. Notwithstanding short crops, the price of food-grains was comparatively lower, owing to increased import from Arakan. But the hill people, as their own crops had failed, had not the money to buy imported food, and therefore suffered to some extent. They rely on their rice crop for food, and on the sale of their cotton for the purchase of luxuries. There is no local skilled labour, and even hired cooly labour has as a rule to be imported.

Trade and commerce.

134. The principal imports are piece-goods, rice and paddy, salt and dried-fish, and the exports are paddy, tobacco, and cotton. India-rubber and garjan oil have ceased to be articles of export. Owing to the exhaustion of the supply, the Lushais do not bring india-rubber to the Damagri bazar as before, and the extensive use of kerosine oil and the indiscriminate felling of garjan trees for timber have greatly reduced the production of garjan oil. It is noticeable that there was a larger importation of piece-goods than in 1892-93, which Mr. Murray ascribes partly to a growing taste for foreign manufactures and partly to the failure of the indigenous cotton from which the hill women weave the clothes worn by their families. For reasons stated above, the import of paddy and rice was almost double and the export much less than in 1892-93, and the export of tobacco, cotton, mustard, and til seeds fell considerably owing to the same cause.

Civil and criminal justice.

135. Justice is administered to some extent by the Government officers, but for the most part according to the tribal custom by the three circle Chiefs.

The civil suits were chiefly for damage done to "sankholas" by stray cattle, the recovery of loans and of joom rent. There was not much of crime among the hill people. There was not a single case beyond the powers of a Magistrate during the calendar year 1893.

Police.

136. As there is not much crime in these parts, the work of the police does not call for much notice. They failed to detect the perpetrators of the few burglaries which took place in the bazar. Mr. Oldham contemplated organising a body of village watchmen to be remunerated by a grant of service land. At present the arrangements for securing a knowledge of what goes on in the interior are defective, but it is probable that a chakran chaukidar would be entirely under the influence of his headman. Meantime criminal absconders can hide in comparative safety.

Khedda operations.

137. Under India Government order No. 413, dated 20th January 1894, received with Bengal Government No. 688For., dated 6th February 1894, the Superintendent of Kheddas has been requested to keep the Commissioner of Chittagong informed of the results of his operations in the Hills. Formerly this was not done. But as cultivation spreads and the country gets more settled, it is necessary that local officers should be more and more associated with these operations. The ravages by wild elephants to crops in the southern portion of the Bohmong's circle have been already mentioned above. The people there are unwilling to carry on plough cultivation unless they are better protected.

Public health.

138. The year is reported to have been a healthy one. The returns of the Rangamati and Bandarban hospitals were comparatively favourable. As usual, there were malarial fever, sporadic cases of cholera, and a few cases of small-pox. Vaccination operations resulted in 16,962 cases, of which 9,849 were successful.

Education.

139. There were altogether 36 schools, including three girls' schools, and 611 pupils, against 43 schools and 721 pupils in 1892-93. The falling off is said to be due partly to the movements among the tribes and partly to want of sufficient grant-in-aids to primary schools. There was one school on the average for every 150 square miles, and one boy was taught to every 15 and one girl to every 139 of children of the school-going age. The total cost of primary education was Rs. 2,536, Rs. 2,388 of which was contributed by the Provincial revenues. In education the Chakmas take the lead; 240 of them are at school against 127 Tipperas, 115 Maghs, 16 Tonchengyas, 12 Mros, 3 Reangs, and 3 Kukis. The Rangamati High School achieved some success at the last Entrance examination. For the first time last year boys from that school were sent up. Four went up and two passed. One of them is the young Chakma Chief, Kumar Bhuban Mohan Ray. This must be considered an event not only in the history of the tribe, but of the Hill Tracts. The mode of his further education is under the consideration of Government. A Chakma girl also passed the lower primary scholarship examination from the Rangamati School. These are significant indications. There was some correspondence last year as to the language which should be taught in the primary schools. Because the population in the Hill Tracts is altogether a mixed one, though the general leaning is towards Bengali manners and customs, local opinion was for adopting the Bengali language.

Wards' and attached estates.

140. The only estate of the minor under Government management was that of the Chakma Chief managed by Dewan Krishto Chandra. The Mong Chief, Neuprusain, having come of age, was formally installed as the Chief of his circle at a Darbar held at Rangamati in May 1893. To assist him in the management of his property, Babu Purno Chandra Das, the late Manager, was lent to him for a year. The management, as in previous year, was satisfactory.

Conduct of Chiefs.

141. The Chakma Chiefs are minors, and the Mong Chief has just begun to exercise his powers. Their managers worked satisfactorily.

The Bohmong caused dissatisfaction among his people by large calls on them for labour, money and produce, which he made by way of feudal service, or '*begar*.' These demands were made most heavily from those who, while living in the area forming the khas mahal, escaped, while that system existed, their tribal contributions. As reported before, the r medy for the malcontents is to move off to another circle or to the South Lushai Hills.

Land revenue system.

142. Under the rules of July 1892, the fiscal divisions in the Hill Tracts are the three circles of the Bohmong, Chakma and the Mong Chiefs, the taluks in 33 blocks, and the mauzas which the Hill Tracts officers are forming with the headmen, service lands, and plough cultivation.

The number of mauzas has increased from 61 in 1892-93 to 113 in 1894. For most of these new mauzas headmen were appointed and service lands allotted them. It will be seen from the Statements A, B and C appended that exactly 50 acres of service lands could not be allotted in every case, possibly

from a misunderstanding of the expression "best arable land" used in Rule XIII. It was explained to the Hill Tracts officers by my predecessor that much land now lying waste would, if brought under cultivation, be very good arable land, and might therefore be demarcated as service lands. It has been proposed also to allot pasture as service lands where arable land was not available.

The mauzas hitherto found are reported to vary in area from 1½ to 20 square miles, in compact blocks capable of being enclosed in a ring-fence.

The jamabandies were in most cases drawn up in the presence of Government officers.

Two taluk dewans were appointed in the Mong Chief's circle within the year, the Chief himself offering to be one of them. No other taluk dewans were appointed.

The land revenue of the Hill Tracts falls under the heads of plough cultivation, bazar rent, san and garjan khola rent, joom rent, and miscellaneous, viz., fisheries, &c. The increase of plough cultivation is shown by the fact that the acreage increased from 6,427 acres in 1892-93 to 7,672 in the year under report, and the revenue demand from Rs. 3,276 in 1891-92 to Rs. 8,251 in 1892-93 and Rs. 8,943 in 1893-94. The largest increase was in the Mong circle.

The majority of the plough holdings were examined, and jamabandies were revised in several cases, surplus land being charged; and an attempt was made in every case to get the acquiescence of the parties affected.

Receipts from bazar rents are insignificant.

The sankhola demand fell in the Chakma and Bohmong's circles; partly for want of proper weeding, some of them became less productive, and partly because in 1892-93 the prices were forced up by extravagant bidding. The joom rent paid by the Chiefs is to some extent stationary. It is in contemplation, however, to raise the Chakma Chief's revenue.

The collection of the revenue is made partly by headmen and chiefs, and partly by Government officers. It was collected fully and punctually. There was a balance of Rs. 505, under head Land Revenue Rs. 203, miscellaneous Rs. 436. The former has since been realised.

The Assistant Commissioner reports that the jooming area in most places has been so exhausted that the hill people have shown a perceptible tendency to settle down to plough cultivation. A decrease in the Chief's income and the increase of assessment work may therefore be anticipated.

General remarks.

143. The Deputy Commissioner's office at Rangamati, to which the Assistant Commissioner had succeeded, was burnt down, with all its records, books and furniture, on the early morning of the 5th May last. Mr. Oldham says: "No clue to the cause of the fire has been obtained, though Rs. 500 reward was offered. I am still disposed to regard it as a blow aimed at the new settlement by some or one of those Chakma Dewans, whose unlawful *human* taluks (of capitation tax) the settlement is discovering and destroying.

"On the whole I regard this fire as a benefit. The loss caused by it was estimated at Rs. 17,000. All the accommodation, furniture, and books required were replaced at a cost of less than Rs. 1,000, while the Rs. 500 or so a year which the maintenance of the old building cost is saved. The fire destroyed an unarranged mass of the most useless and profitless records and discussions and tabulations and statistics which I have ever seen, and so far from impeding the new settlements, has cleared the ground for the operations. The Police Office, in which the real history of the Hill Tracts is preserved, was not injured, nor was the treasury.

"I took advantage of this occurrence to entirely recast the registers and forms in use in the Hill Tracts. This turned out to be a much heavier task than I expected, as I had to do it absolutely single-handed, and it is not yet finished, though very nearly so. The object was to make the forms more effective, to simplify them and diminish their number (for which there was much room), and to adopt the Bengal printed forms, whether Government, Board of Revenue, or High Court's, when applicable, and for this, too, there was a good deal of room. The registers of all kinds have been cut down from over 100 to 36 in number. In my last report I was mistaken in saying that the word *sarbarakar* had not been used for 20 years as the proper official title of the Chiefs in their fiscal positions. It was used by the Bengal Government in

1884 in a printed letter received by Mr. Cotton when Commissioner. The letter was to lay down the position of the Chakma Chief (who had been giving much trouble) as regards the supply of labour. It was again used by Mr. Lyall in February 1886, when he declared in Darbar the present minor Bhubon Mohan to have succeeded to the sarbarakarship, and he describes his having done so in his report for that year. It was of course the term used by me when I installed the Mong Chief Neuprasain last May. It is of the greatest importance to adhere to the use of this term, and to reaffirm periodically the exact fiscal position of the Chiefs, and that their only right in lands is as tenants under Government, who have been let into lands for plough cultivation, and that they can never occupy the position in the Hill Tracts of talukdars, still less of zamindars. It is to be remembered that their claims to such a position are actively fostered by their superior clansmen like the Chakma Dewans, who, if their Chiefs were acknowledged to be zamindars, would themselves easily become talukdars."

The development of plough cultivation seems to portend the cessation of jhooming in the near future. The new rules and system of land revenue worked satisfactorily. Local opposition seems to have died out. The only dissatisfaction apparent was on the part of lessees of land to whom the anti-subletting clause of the rules of 1892 was applied with retrospective effect, with the result that their leases were cancelled, their improvements confiscated, and their lands let on enhanced rents to actual cultivators. Some of these grants had been made to influential hillmen or Bengalis of the plains, and the application to such leases with retrospective effect of the anti-subletting clause of the rules of 1892 seemed to me inequitable. The previous rules forbade transfers except of the entire grant and with registration in the Deputy Commissioner's office. Transfer, however, I take it, cannot be held to include subletting.

III.—HILL TIPPERA.

144. I have not got much information to give about Hill Tippera. Personally I do not know much as yet about the country, and I am waiting for the report of the Political Agent. He has given me a very brief note, saying that the administration of the State during the year was uneventful. The existing arrangement under which the business of the State is carried on by the Jubraj and the Bara Thakur under the supervision of the Maharaja, appears to have worked smoothly and satisfactorily on the whole. More use is now made of the native element in administering the country, though very little change has been made in the general lines on which the administration is carried on. The Jubraj and the Bara Thakur met the Commissioner of the Division at Comilla in July 1893, the Maharaja being, it is said, unable to come personally owing to a death in his family and to bad health.

AMENDMENT OF THE BENGAL MUNICIPAL ACT III OF 1884.

Cir. No. 34M., dated Calcutta the 27th August 1894.

From—C. W. BOLTON, Esq., Offg. Secretary to the Government of Bengal,
To—All Commissioners of Divisions.

AT page 15 of Part III of the *Calcutta Gazette* of the 15th August 1894, it is announced that His Excellency the Governor-General in Council has signified his assent to the Bill to consolidate and amend the law relating to municipalities in Bengal, which was passed by the Bengal Legislative Council on the 28th April 1894. The Bill is printed in full in the Gazette of the same date; but, in order to draw attention to the alterations and additions which have been effected, a special set of copies has been printed, which I am now directed to forward to you for information and for communication to the officers subordinate to you, showing in italics the new matter added by Act IV of 1894 and indicating by the method of black underlines the passages in the old Act which have been omitted or altered. I am also to invite your attention to the following observations on the chief points in the new Act.

2. The sections of the Bill naturally divide themselves into two groups, viz. (*a*) those which make administrative changes of a more or less important character; and (*b*) those which are merely corrective, which repair omissions, give effect to the decisions of the Law Courts, recast the wording of old sections, and repeal those which are no longer necessary. The latter form, of course, far the larger group, but they need little notice, as for the most part they explain themselves.

3. The matters on which Government, on behalf of the rate-payers or for the better administration of the country, has felt itself obliged to assume larger powers than it possessed before are few in number, and in each case careful safeguards are provided. First comes the power taken in sections 9 and 9A to disestablish a municipality, or to alter its boundaries when it no longer fulfils the conditions which originally justified its creation; then follow the power to appoint Commissioners *ex-officio* section 14), the power given to Commissioners of Divisions to remove Commissioners (section 20), the delegation to Commissioners of Divisions of certain of the smaller powers of Government (section 29A); the appointment of a special Auditor when the accounts are in confusion (section 82 ; and, lastly, the power to appoint an assessor when it has been proved that the affairs of the municipality require it, and when the Commissioners will not move of themselves (section 111A).

4. On the other hand, the powers and responsibilities of the Commissioners have been advanced in many ways. They will now be able to order a survey (section 223A), and to organise a fire-brigade (sections 349A and B). Their financial powers are increased by the provision that the Commissioner of the Division shall not finally pass orders on their Budgets till they have had an opportunity of replying to his criticisms (section 76), and their income may be considerably developed in several ways; the maximum of the water-rate is increased to $7\frac{1}{2}$ instead of 6 per cent. (sections 86 and 279); they may levy in the same municipality both the tax on persons and the rate on holdings (section 84); arable lands are no longer exempt from assessment where the personal tax is in force (section 87); property in their temporary possession may be turned to pecuniary advantage (section 200); licenses may be issued at burning-ghats and burial grounds (section 260A), and the latrine rate may be levied from vacant holdings (section 322). Not less important than their increased financial powers are the larger powers of administrative control now confided to Municipal Commissioners. They may control the water-supply where its purity is suspected, even when private rights are affected (sections 199-199A); they will exercise larger powers over ruined and dangerous houses, walls and trees (sections 208, 210, 210A); their powers in regard to building regulations may be greatly increased at their option (sec-

tions 237 to 242), and they have been enabled to frame wider bye-laws and to enact rules of business for their own guidance (sections 350, 350A and 351A).

5. Turning next to the most important sections of the Bill in detail, I am to direct your attention in the first place to sections 9, 9A and 9B of the Act. Under the old law a place which had once been made a municipality, however little it might be entitled to claim municipal government, could be removed from that category, or could have its limits varied, only upon the recommendation of the Commissioners at a meeting, a course which for obvious reasons was very seldom adopted: the new law does not take from the Commissioners this power of recommendation, but provides that, where the conditions laid down in section 10 as to amount or density or character of population no longer exist, the Lieutenant-Governor, after affording full opportunity for objections to be made, may exercise in this respect, without recommendation from the Municipal Commissioners, the powers which ordinarily he would only use upon the recommendations of that body.

6. Section 14 of the Act as amended provides that the appointed Commissioners may be appointed either by name or by official designation. The object of this provision is to avoid the inconvenience which sometimes occurs when an official is transferred who has been appointed by name only. As vacancies take place among the appointed Commissioners of municipalities in your division, it is for you to consider in each case whether the new nominee should be appointed by name or by his official designation. This change of principle involves petty changes in sections 17 and 23 of the Act.

7. By the amendment of section 15 of the Act, an important provision is added which enables Government to lay down by rule the authority who shall decide all election disputes under the Act. The question of amending the election rules is still under discussion, and orders on this point will issue hereafter. A proviso at the end of the section safeguards such jurisdiction as the Civil Courts may now be deemed to have in respect of these disputes. The franchise is extended by the same section to a class of persons whose exclusion hitherto has been felt to be anomalous, viz., those who, being in receipt of a monthly salary of Rs. 50 or more, which implies intelligence and education, have yet had no vote because they were not independent ratepayers. The number of voters added to the list by this section will not be large, but they should all be citizens of weight and importance. A new clause added to this section also declares what shall be included in the term rates—a point which has not hitherto been decided.

8. Section 20 of the Act has been recast so as to enact clearly on what grounds a Municipal Commissioner may be removed, and who shall pass the order for his removal.

9. Section 23 of the amended Act gives to the Local-Government power to appoint the Chairman of a municipality entered in Schedule II by name or by official designation. In clause 2 of this section it is made quite clear that when the Commissioners of a municipality in Schedule I have once asked Government to appoint a Chairman, they do not thereby permanently surrender their right of election, but are entitled to exercise it on the occurrence of any future vacancy in the post of Chairman.

10. The alterations in section 26 of the Act enable a Chairman whose term of office under the Act would ordinarily have expired to carry on his duties till a proper and effective meeting is convened to elect his successor or ask Government to appoint him. By the same section the old body of the Commissioners will continue in office until the first meeting of their successors. Section 26A provides for certain subsidiary but necessary formalities in the same connection. By section 26B leave may be given to a Chairman or Vice-Chairman, and an omission in the present Act, which has not infrequently caused inconvenience, is thus repaired. As a corollary, section 28 authorises the grant of leave allowances to these officers when they are in the receipt of salary. Section 27A defines clearly the procedure to be followed when a Chairman, Vice-Chairman or Commissioner desires to resign.

11. By section 29A certain minor powers, which have hitherto been exercised by Government, may now be delegated to the Commissioner of the Division.

12. Two important alterations have been made in section 30. One has reference to the ruling of the Calcutta High Court in *the Chairman of the Naihaty*

Municipality vs. *Kishori Lal Gossami*, I. L. R., 13 Calc, 38, and *Modhu Sudan Kundu* vs. *Promodu Nath Roy*, I. L. R., 20 Calc., 732, where it was pointed out that the absolute property in the soil of a road was not vested in the Commissioners. This will no longer be the case. The object of the other alteration is to provide that a road, bridge, or drain need not be entirely excluded from the provisions of this Act, but only from the operation of certain specified sections.

13. The important provisions of the new sections 37A to 37M were very carefully framed by the Select Committee before they were accepted by Council, and the Lieutenant-Governor trusts that they will receive at the hands of local authorities the same careful consideration. It is hoped that recourse will be fully and frequently had to these sections in the larger municipalities which have not yet been provided with a wholesome water-supply, and that they will facilitate the execution of a much-needed reform with the least possible risk of discord or extravagance. It will be noticed first that compulsion will not be employed by Government, except in the last resort (section 37K), and not until the local authorities have had ample opportunity afforded them of taking action spontaneously, and, secondly, that even then the representations of a substantial and undisputed majority will suffice to procure the abandonment of the scheme.

14. Section 59 requires the consent of Government to the *ad interim* election of a Chairman, and section 66A provides for the settlement of disputes between a municipality and its external neighbours, such as another municipality or the District Board.

15. Some additions have been made to sections 68 and 69 of the Act, which allow the municipal fund to be expended on the maintenance of Municipal Benches and on the payment of an officer who may be specially deputed to revise their accounts.

16. Section 76 of the Act is more remarkable for what it omits than for what it enacts. An effort was made when the Bill was passing through Council to confine the supervision of the Commissioner of the Division to the major heads only of the annual budget estimate, and the refusal of the Council to accept this proposal has been commented upon with some acerbity. It has been alleged that Government insisted on a retrograde step which deprived Municipal Commissioners of a privilege they already possessed. The exact contrary is the case: the Commissioner of the Division has been invested with no new powers, but on the contrary an important, though reasonable, concession has been made in the provision that the Commissioner can no longer alter a municipal budget without affording the Commissioners an opportunity of considering and replying to any modifications which he may think desirable in their estimates.

17. Section 82 of the Act has been recast so as to provide for the appointment of a special officer to examine and report upon the accounts of a municipality whenever the yearly audit has shown that the accounts are in great confusion and the Municipal Commissioners, after due notice, have failed to set them straight.

18. Two important changes in the law on municipal taxation have been introduced in sections 85 and 86 of the Act. Both the tax on holdings and the personal tax may now be levied in the same municipality, provided that both are not levied in the same ward. But where a municipality is not divided into wards, it must be considered as consisting of one ward only, and both these taxes cannot, therefore, be in force there at the same time. By the second section quoted the maximum percentage for water-rate has been raised from 6½ and 5 to 7½ and 6 respectively. In section 87 of the Act it is now provided that in assessing the personal tax arable lands held by the assessee may be taken into account, but not any public burial ground or burning ghat. It was understood by the Council that, as a matter of fact, Municipal Commissioners when assessing a man's means and income are unable to leave out of consideration the income he derives from arable land, and it was deemed advisable to sanction this practice by legal enactment. Moreover, it was pointed out that, in the absence of such a provision, arable land within the boundaries of a municipality escaped taxation altogether.

19. As regards the rate on the value of holdings, some changes have been made in sections 97, 98 and 99 of the Act which explain themselves.

20. A new section, 111A, deals with the appointment of an assessor of municipal taxes—a question which has probably given rise to more discussion than any other embodied in the Bill. The provisions of the section as they now stands have been very carefully considered, and a power, the want of which has sometimes been very acutely felt, has been placed in the hands of Government with the minimum of inconvenience and the greatest possible regard to the dignity of Municipal Commissioners. The authority now conferred will, in fact, be exercised only when the necessity for action admits of no question, and it may be hoped that the very existence of this power in the statute book will make its exercise unnecessary.

21. The importance of the alteration in section 116 should not be overlooked. In accordance with the spirit of the decision of the High Court in the case specified in the margin, section 116 now provides that the decision of the Commissioners or of a Committee appointed by them under section 114 shall be final only as regards the amount of assessment or rating: the larger question of liability to be assessed or rated will now be left to the decision of the Civil Courts.

Appeal under section 13 *of the Letters Patent No.* 23 *of* 1893.
Chairman, Barisal Municipality ... *Defendant-Appellant*
versus
Srimutty Addya Soondury Mittra and others *Plaintiffs-Respondents.*

22. In section 121 an important proviso has been added on the subject of distrained property, and the addition to section 125 provides a punishment for the breach of the orders in the earlier part of the section. Similarly, the addition of sections 141A and 147A is intended to correct what is an omission in the old law, and the same may be said of the addition of the word "sewage" in section 187 of the Act.

23. Important additions have been made to the sections which deal with the control of bathing and washing places, wells and tanks. In the first place, in section 199 wells have been brought under the control of Commissioners to the same extent as other sources for the supply of water for drinking and culinary purposes, and secondly, the last clause of that section has been rewritten so as to define with greater precision the powers of Municipal Commissioners in respect of the private portion of any water-course which forms part of the public water supply. Section 199A gives to the Commissioners the power of prohibiting the use of unwholesome water, the absence of which power has often been extremely inconvenient, and the Lieutenant-Governor hopes that it will be freely exercised. It will now be possible for municipalities to close a source of water-supply which may be suspected, and to maintain this prohibition until the purity and wholesomeness of the water is established by chemical analysis in accordance with the rules laid down in the Sanitary Commissioner's circular No. 342 of the 25th June 1894. The reference may be made by the Commissioners, but would ordinarily be made by the person aggrieved by the closing of the well or tank.

24. By section 200 as now enacted, when an unwholesome tank or other source of water-supply has to be put in order, the Commissioners may call upon the owner or occupier to do one of three things, *i.e.*, either to re-excavate, fill up, or cleanse the place to their satisfaction. If the owner or occupier does none of these things, the Commissioners may do any one of them for him, and by the clause now added, if they re-excavate or fill up, they may retain possession of the property and turn it to profitable account until the expenses thereby incurred have been realised. The Commissioners are not entitled by the law to dictate to the owner which of the three courses open to him he is to pursue.

25. Section 208 has been rewritten so as to give the Commissioners power in respect of trees, hedges, &c., which are likely to cause damage or obstruction, or to foul the water of any well or tank.

26. The powers of the Commissioners in regard to buildings in a dangerous state have been a good deal extended in sections 210 and 210A, and these sections should be carefully noted. The Commissioners can now interfere to protect the inmates of a building against the consequences of their own apathy or neglect. The Lieutenant-Governor has no doubt that the good sense of the local authorities throughout the province will prevent the powers now given from being misused to the annoyance of individuals.

27. The penal provisions of section 217 have been extended to section 199A; those of section 218 to sections 206 and 207; and those of section 219

to section 210A; and persons infringing the provisions of those sections can now be punished for so doing.

28. The addition to section 220 should be noted. It is now formally declared by law that wherever the whole of the provisions of any one of the Parts VII, VIII or IX of the Act of 1876 were in force when Act III of 1884 became law, the whole of each of the corresponding Parts VI, XI or X of this Act shall be considered to have been in force. This provision was necessary in order to remove doubt as to the continued application of these Parts. Where only a portion of the provisions of any one of Parts VII, VIII and IX of the Act of 1876 was in force when Act III (B.C.) of 1884 became law, its continuance was secured by the provision of section 1 of Act III of 1884, as further explained by the additions made to section 2 by the present amending Act IV of 1894. The result is that all notifications or orders passed, and all rules made under Act V of 1876, are still in force, unless expressly rescinded, even although the number of the Parts or sections quoted in them may have been altered.

29. By section 223A of the Act power has been given to make a survey, the cost of which is chargeable to the municipal fund under section 69 (9).

30. The sections which refer to building regulations (sections 236-244 of the Act) have been considerably expanded and should be carefully perused. The provisions of section 241 are suitable only to large municipalities, which include many masonry buildings; and while all the remaining sections of this group came into force on the passing of this Act in every municipality in which the corresponding sections of Act III of 1884 were in force at the time, it will be observed that the provisions of section 241 are expressly exempted from the operation of this general rule, and that this section will not take effect in a municipality until it has been specially extended thereto at the request of the Commissioners at a meeting.

31. Some small alterations have been made in the sections relating to burial and burning grounds, and it is believed that some income might be derived from the licenses which may now be granted under section 260A. These receipts might well be devoted to the improvement of these places which are often allowed to remain in very bad order.

32. Three important additions have been made to the provisions of sections 261 and 262, which deal with certain offensive or dangerous trades or occupations. Places for the storage of rags or bones or both have been added to the list of those for the use of which a license is necessary, and the last clause of the section has been so rewritten as to safeguard, as far as possible, persons following any one of the specified trades or occupations from having to pay unreasonable and unsuitable fees for the privilege. It is important to note that in future no fees can be levied under this section until the scale has been approved by the Commissioner of the Division. No time should, therefore, be lost in submitting the scale for sanction. Lastly, section 262A, empowers the Commissioners to prohibit the burning of bricks, etc., for private purposes within defined limits. Under section 263, as now amended, any person who keeps even one horse or pony or one head of cattle for the purpose of trade or business may be required to take out a license. The object of this change is not to raise an income from the poor, but to bring under control all the places where such animals are kept.

33. The additions in the penal sections—270, 271, and 273—merely give effect to provisions in other parts of the Act.

34. The alterations in Part VII of the Act, which deals with water-supply, are the outcome of prolonged and elaborate discussion. The maximum amount of the water-rate has been raised from 5 and 6½ per cent. to 6 and 7½ per cent. respectively. The principle on which it is to be calculated is carefully defined; and a fair share of the cost of collection and of general supervision has been made a legitimate charge against the fund: lands used exclusively for agricultural purposes are exempted from assessment, and power is left to the Commissioners to make special arrangements for the supply of water to persons beyond the limit up to which a water-rate can be levied.

35. A new section has been added (section 318A) making the lighting rates into a separate fund and defining how they may be expended.

36. Important changes have also been made in Part IX which deals with the cleansing of private privies and cess-pools. It is now clearly laid down

that this Part does not deal with public latrines, which should be provided under section 186 as part of the general scheme of conservancy in the town, but with the cleansing of private privies and cess-pools only. It was at one time proposed to substitute for the existing rate a scale of fees for service rendered, but after the fullest consideration the proposal was abandoned and the existing arrangements maintained. Cess-pools have been brought within the scope of this Part, as it appears that in some cases it was difficult to distinguish between a cess-pool and a privy. No privy rate will be assessed on a holding which does not contain a dwelling-house (section 321), nor on certain public buildings (section 334A), nor will it be levied from a shop-keeper twice over (section 322). Lastly, remissions or refunds will be allowed for vacant holdings. The effect of these changes ought to be to lighten the fees charged under this Part to the poorer residents of the municipality.

37. The effect of the additions made to section 339 in Part X (regulation of markets) is to protect the proprietors of old markets from arbitrary treatment. The section compels Commissioners to renew year by year licenses for markets lawfully established at the time of the extension of this Part to the municipality, so long as the Chairman continues to give year by year the certificate required by section 340 that the land is fit for use as a market for the sale of provisions. When a market is established after the extension of this Part to the municipality, no such compulsion exists, and the Commissioners may give or withhold the license as they please.

38. Part XI-A is entirely new and empowers Municipal Commissioners to make arrangements for the extinction and prevention of fire. The cost of these arrangements is declared to be a legitimate charge upon the municipal fund by section 69(8).

39. It has been found that the wording of section 350 of Act III of 1884 was not sufficiently specific, and that, as a matter of fact, many bye-laws have been made from time to time, and have been accepted by Government which do not, strictly speaking, fall within the scope of the section as it formerly stood: The wording has, therefore, been recast, and the matters in regard to which bye-laws may properly be made have been more clearly defined. At the same time an opportunity has been taken in section 350A to give to hill municipalities more stringent powers over private owners of land as regards cutting down timber and excavation of building sites. A new section (351A) has been added, empowering the Commissioners of all municipalities to make rules for the conduct of business in the same way as District and Local Boards have been empowered under Act III (B. C.) of 1885. The Lieutenant-Governor proposes to circulate for adoption by Municipal Commissioners a set of model bye-laws and one of model rules of business. Meanwhile the bye-laws which have already been passed by each municipality and confirmed by Government will continue in force until repealed or altered in the proper manner. Power has been taken by the Lieutenant-Governor to cancel any bye-law which he has sanctioned: an omission in the former law, which can only have been due to oversight.

40. The last section to which it is necessary to refer is 365, which now extends to offences against bye-laws as well as those against the Act itself, and allows certain selected servants of a municipality to exercise the powers of a police officer under the section.

RESOLUTION ON THE REPORT ON THE ADMINISTRATION OF THE INCOME-TAX IN BENGAL FOR THE YEAR 1893-94.

FINANCIAL DEPARTMENT—SEPARATE REVENUE.

Calcutta, the 28th August 1894.

RESOLUTION.—No. 4688S.R.

READ—

The Report of the Board of Revenue on the financial results of the Administration of the Income-tax for the year 1893-94.

The principal administrative change in the working of the Income-tax Act during the year was the appointment of a whole-time officer as Collector of the tax for Calcutta, in the place of an officer who also discharged the duties of another office. The system under which the pay of assessors is personal, not local, so that they can be promoted without transfer, is reported to have worked well, but occasional transfers are advantageous, and can be made under the rules. The amalgamation under a single assessor of the district of Hooghly with Howrah, of Bankura with Birbhum, and of Manbhum with Singhbhum, is reported not to have been successful. If this result is confirmed by further experience, the Government will be prepared to reconsider the arrangement, on the receipt of a special report from the Board. The scale of the clerical and assessing establishments was revised, in accordance with a suggestion of the Government, and made more elastic and commensurate with the work done, the scheme resulting in an immediate saving of Rs. 2,004 per annum, and a further gradual saving of Rs. 2,640 per annum.

2. The following statement compares the financial results of the income-tax during the last two years :—

	1892-93.	1893-94.
	Persons.	Persons.
Number of persons originally assessed, excluding Government servants	106,142	107,741
Number of persons finally assessed, excluding Government servants	103,894	105,476
Number of persons finally assessed, including Government servants	111,858	113,770
Number of assessees, including Government servants, who paid the tax within the year	108,818	110,483
	Rs.	Rs.
Final demand of income-tax for the current year	41,73,554	43,51,144
Final demand, including penalties, fines, and arrears of previous years	44,50,299	46,06,032
Collections of income-tax within the year ...	40,60,705	41,97,022
Total actual receipts, including advance and excess payments and after-adjustments ...	42,25,366	43,48,453
Charges	1,80,171	1,76,272
Percentage of charges on total actual receipts	4·3	4·1
Net revenue	40,45,195	41,72,181

The net revenue shows an increase of Rs. 1,26,986, or 3 per cent., against a decrease of 1·8 per cent. in the preceding year. Including advance payments and excess collections, and making allowance for various adjustments, the actual receipts at the close of the year amounted to Rs. 43,48,453, against Rs. 42,25,366

in the previous year. The receipts on account of the current demand for 1893-94 amounted to Rs. 42,27,219, which is Rs. 1,40,792 in excess of similar receipts in the previous year.

The increase in the final demand occurred in every district, except Howrah, the 24-Parganas, Khulna, Darjeeling, Mymensingh, Cuttack, and Singhbhum, and is attributed to fresh and enhanced assessments resulting from more careful and systematic enquiries on the part of the assessing officers. In Howrah the decrease was insignificant, and in Mymensingh it amounted to only one per cent. of the former demand. In the 24-Parganas, however, the percentage was 9·6, in Cuttack 6·8, in Singhbhum 6·2, in Darjeeling 4·6, and in Khulna 3·7. Various causes are alleged for the large decline in the 24-Parganas, but the Lieutenant-Governor is not disposed to accept the explanation without reserve. Failure of crops in Khulna, decline of trade in Cuttack, and an outbreak of rinderpest affecting the incomes of cart-owners and dairy farmers, and the removal of a number of contractors on the completion of certain large works, in Darjeeling, are assigned as the causes of the decrease in those districts. In Singhbhum it is probable, as the Board think, that the reduction is due mainly to the negligence of the assessors. The Board mention that Mr. Lyall, while inspecting the Puri Income-tax Office, found that the ground-rents liable to taxation had not been taxed, and that, as the result of this discovery, ground-rents in municipal areas have since been brought under assessment in all the districts in Orissa.

3. *Demand, collections and balances.*—The following statement shows the original demand, the revised demand, and the percentage of collections from assessees exclusive of Government servants:—

Year.	Original number of assessees.	Revised number of assessees.	Original demand.	Final demand after revision.	Amount of final demand collected.	Percentage of final demand collected.
1	2	3	4	5	6	7
			Rs.	Rs.	Rs.	
1892-93	106,142	103,894	38,17,869	36,97,623	35,84,774	96·9
1893-94	107,741	105,476	39,90,291	38,58,026	37,03,904	96·

The outstanding balance at the close of the year, including penalties, &c., aggregated Rs. 2,66,987, against Rs. 2,48,747 in 1892-93. Of this balance, Rs. 60,742 are reported to be good and under realization, Rs. 1,19,464 doubtful, and Rs. 86,781 bad and irrecoverable.

4. The only districts which succeeded in collecting the entire demand within the year were Balasore and Puri. In the following districts the collections on account of the current and arrear demand, including penalties, &c., were below 95 per cent.:—

Manbhum	94·4	Darbhanga	86·3
Muzaffarpur	93·9	Gaya	84·7
Purnea	93·3	Khulna	83·4
Hooghly	93	24-Parganas	78
Birbhum	89·6	Singhbhum	69·4
Calcutta	87·2		

With the exception of Manbhum, Hooghly, and Birbhum, the same districts failed to attain the prescribed standard in 1892. In Gaya, Hooghly, Calcutta, the 24-Parganas, Singhbhum, and Birbhum, the collections of the current demand of the tax also fell short of the standard in the past year, and the explanations furnished are generally unsatisfactory. The Lieutenant-Governor must again impress on the officers concerned the importance of energy and promptitude in both the assessment and the collection of the tax, and he will look for evidence of marked improvement in the next report. The large outstanding balances are attributed in Birbhum and Calcutta to the completion of the assessments towards the end of the year, but it is not explained why such delay occurred. It is obviously essential to success in collecting the

largest possible percentage of the tax within the year, that the assessments should be concluded two or three months before the close of the year, and every effort should be made to achieve this result.

5. *Assessments.*—The number of assessors employed during the year was reduced from 52 to 49 in consequence of the amalgamation of certain districts already referred to. The assessors visited 70,992 villages and 542 streets in Calcutta, against 78,447 and 512 streets in Calcutta in the previous year. The decrease in the number of villages appears to be mainly due to the fact that previously in some districts villages which were not actually visited, but regarding which enquiries were made in their neighbourhood, were returned as visited, and villages visited by both the Deputy Collector and the Assessor were shown twice. The Board have rightly issued orders stopping this practice. The general explanation of the local officers in regard to the cases where the visits to villages were really fewer than in the previous year is that more attention was given to towns and villages which were known or believed to contain persons liable to taxation. The Lieutenant-Governor agrees that this is the sound principle, and that time should not be spent in visiting small and purely agricultural villages which can be better employed in making more careful assessment elsewhere. Enquiries must, however, be extended to all villages in which any likelihood exists of the discovery of new assessees.

6. The number of persons finally assessed was 105,476, against 103,894 in 1892-93, the percentage of exemption (2·1) being the same as in the previous years. Calcutta also partly recovered its position with an increase of 248, against a decrease of 516 in the preceding year. A few districts show a reduction, but nowhere exceeding 90, save in the 24-Parganas, where the number was 487. This large decrease is attributed to depression in some trades and closure of business, but it appears partly due to want of energy on the part of the establishment.

7. *Objections.*—The statistics of objections to assessment are shown in the following table:—

Year.	Number originally assessed.	Number of objections.	Percentage of objections.	Number of successful objections.	Percentage of successful to total number of objections, column 4 to column 3.
1	2	3	4	5	6
1892-93	106,142	11,640	11·	4,205	36·1
1893-94	107,741	12,269	11·4	4,593	37·4

The percentage of objections to assessment was again highest in Gaya (31·6) and Puri (23). The percentage of successful objections exceeded 50 in the 24-Parganas (64·8), Darjeeling (62), Purnea (61·9), Khulna (53·8), and Calcutta (52·6). These percentages are not creditable to the officers against whose assessments the objections were preferred. After full allowance for the difficulty of estimating profits in the absence of accounts, it is clear that the assessments were hasty and injudicious in many cases. Closer and more constant supervision should be exercised over the work of the assessors while the assessments are being revised.

8. *Incidence of the tax.*—Excluding the tax on interest of Government securities and the salaries of officials, the average incidence of the tax on the whole population of the province was Re. 1 to every 18·4 persons, against 19·2 in the previous year. Without Calcutta, the average was Re. 1 to every 35·7 inhabitants, against Re. 1 to every 36·9 inhabitants in 1892-93. Darjeeling again shows the highest mufassal average (Re. 1 to every five persons) and Cuttack the lowest (Re. 1 to every 82 persons). In Calcutta the average incidence was Re. 1 to every ·4 persons, and one person in every 39 persons was assessed to the tax, the proportion for the whole of Bengal being 1 in 674, against 1 in 684 in the previous year.

9. The following statement illustrates the distribution of the tax between Calcutta and the rest of the province under the present Act and under former Income-tax and License Acts :—

Years.	Act imposing tax.	Number of Persons assessed in—			Amount of Tax realized in—		
		Calcutta.	Rest of province.	Total of columns 3 and 4.	Calcutta.	Rest of province.	Total of columns 6 and 7.

* Figures not available.
† Exclusive of the tax on salaries, &c., recovered by the Accountant-General and the tax on the interest of Government securities.

The figures show a gradual increase in collections in both Calcutta and the districts since 1887-88, Calcutta contributing in the past year 47.8 per cent. of the whole. The percentage of the final on the original demand and of objections on the total number of persons assessed has also steadily improved, with a slight falling off in the year under review, indicating gradual improvement in the working of the law.

10. *Coercive measures.*—The coercive measures which had to be taken for the realization of the tax are shown in the following statement :—

Year.	Number of persons finally assessed.	Distress Warrants.		Cases of Distraint.		Cases of Sale.	
		Number	Percentage to column 2.	Number.	Percentage to column 2.	Number.	Percentage to column 2.
1	2	3	4	5	6	7	8
1891-92 ...	103,176	6,450	6·2	2,329	2·2	333	·3
1892-93 ...	103,894	5,559	5·4	2,460	2·4	362	·3
1893-94 ...	105,476	5,920	5·6	2,290	2·2	288	·3

In the majority of cases payment is made on the issue of the warrants, while in the remainder distraint suffices and sales are rare. Wilful recusancy doubtless accounts for a large proportion of the warrants, but the number in some districts is excessive. The Collectors should give attention to the matter. Earlier completion of the assessments would obviate the issue of coercive process, which is often found necessary towards the close of the year.

The proportion of warrants issued on the number of persons assessed was above 10 per cent. in the districts of Singhbhum, Jessore, Khulna, Muzaffarpur, Noakhali, Gaya, and Jalpaiguri. The first four districts showed a high percentage in 1892-93 also. In eight districts no sales took place, while they were most numerous in Jessore, Rangpur, and Khulna. In Calcutta distress warrants were issued in 1,499 cases, but in one case only was sale found necessary.

11. The amount of tax collected under section 9 (2) of the Income-tax Act, which permits private employers to undertake the collection of the tax from their employés on receipt of a commission from the Government, was Rs. 2,66,584, against Rs. 2,47,918 in the previous year. The number

of companies, &c., who undertook to collect the tax again fell from 324 to 307. The Board are inclined to recommend an increase of the commission allowed, in order to offer greater inducement to companies and other employers to enter into agreements with the Government. The present rate of commission does not appear to the Lieutenant-Governor inadequate for the small trouble imposed, but he will be prepared to consider any proposals, which the Board may desire to submit. This special provision of the law cannot be expected to work with advantage where the number of employés liable to taxation is very small. With a large number of such employés the commission offered is remunerative to the employer, and also repays the Government by the amount of relief given to the collecting establishment.

12. *Expenditure.*—The expenditure incurred in the working of the tax fell from Rs. 1,80,171 in 1892-93 to Rs. 1,76,272. In view of the increased collections and the appointment of a whole-time officer as Collector of Calcutta, the decrease is very satisfactory.

13. The system of payment by money-order continues to gain in popularity. Only one case of embezzlement of a very trifling character was discovered during the year. The Board devote a paragraph (52) to evasions of the stamp law detected by income-tax assessors. The information is useful to the Stamp Department, and should be regularly furnished to that Department for the annual report. Its inclusion in the present report may be dispensed with in future.

14. The names of the Deputy Collectors specially reported by the Board as having done good service will be communicated to the Appointment Department. The remarks regarding the unsatisfactory work of some officers will not, the Lieutenant-Governor trusts, be ineffectual. The principle of keeping a Deputy Collector in exclusive charge of Excise and Income-tax has been definitely laid down for all districts except the few in the third class, in which the work is not sufficient for a whole-time officer. In those cases the Collector should not place the Deputy Collector in charge of duties which entirely preclude travelling for excise and income-tax purposes.

15. Popular feeling in regard to the tax remains the same. It is greatly disliked, and efforts to evade it by a variety of devices are still common among certain classes of assessees.

16. The thanks of Government are due to the Board for their supervision of the collection of the tax during the year.

By order of the Lieutenant-Governor of Bengal,

C. W. BOLTON,

Offg. Secretary to the Government of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 25th August, 1894.

30	Champaran „ 25, '94	3·52	Weather—cloudy. Transplantation of winter rice in progress. Prospects of *bhadoi* crops fair. Common rice selling at 13 seers per rupee. Fodder and water sufficient.
31	Muzaffarpur „ 25, '94	5·09	Weather—seasonable, with showers almost daily. Transplantation of paddy being vigorously pushed on. Standing crops in Mahuwa thana in Hajipur subdivision damaged somewhat by excessive rain and also flood; otherwise prospects very favourable. No cattle-disease. Fodder and water plentiful. Rice selling on an average at 11 seers per rupee.
	Hajipur ...	1·64	
	Sitamarhi ..	0·17	
32	Darbhanga 25, '94	8·78	Weather—cloudy, and rainy during latter part of the week. Prospects of *bhadoi* continue very favourable. *Makai* crop approaching maturity. Heavy rain which has fallen this week will enable cultivators to complete transplanting operations. Fodder for cattle sufficient. Price of common rice remains stationary.
	Samastipur ..	1·90	
	BHAGALPUR DIVISION.		
33	Monghyr „ 25, '94	2·43	Weather—hot and cloudy, with occasional showers, and east and west winds. Transplantation of winter rice nearly completed. *Makai, marua*, and other standing crops have suffered much at Begusarai and Sadar owing to the unusual flood of the Ganges and excessive rain. Indigo and sugarcane doing well. Fodder and water sufficient. Cattle-pox reported from Jamui and Sadar. Prices of common rice:—
	Begusarai ...	2·43	
	Jamui ...	1·93	
			Srs.
			Monghyr ... ... 11¾ }
			Begusarai ... ... 11 } per rupee.
			Jamui ... ... 13¾ }
34	Bhagalpur „ 25, '94	1·94	Weather—seasonable. Prospects of crops good. Outturn of *marua* estimated at 20 annas and *bhadoi* rice 16 annas in the north of the district. About the same in other parts of the district. Common rice selling from 13 to 15 seers per rupee.
	Banka ...	0·88	
	Madhipura ..	2·49	
	Supaul ...	2·24	
35	Purnea „ 25, '94	4·64	Weather—rainy. Harvesting of *bhadoi* and transplantation of *aghani* progressing satisfactorily. Fodder and water plentiful. Cattle-disease reported from Araria. Rivers are again rising after a fall. Prices of common rice:—
	Kishanganj ...	0·86	
	Araria ...	1·94	
			Srs.
			Sadar ... ... 15 }
			Kishanganj ... ... 12 } per rupee.

	Inches.
The mean pressure of the seven days	29·661
The average pressure of the corresponding period for 24 years, Surveyor-General's Office	29·601
	Hours.
The total number of hours of bright sunshine	10·7
The maximum possible number of hours of sunshine	89·2
	°
The mean temperature of the seven days	81·6
The average temperature of the corresponding period for 24 years, Surveyor-General's Office	83·1
The extreme variation of temperature	12·3
The maximum temperature	87·5
	Miles.
The highest velocity of the wind in one hour	12
	%
The mean relative humidity	89
The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office	87
	Inches.
The total fall of rain from 19th to 25th August 1894	0·84
The average fall of the corresponding period for 24 years, Surveyor-General's Office	3·17
The total fall from 1st January to 25th August 1894	34·37
The average fall of the corresponding period for 24 years, Surveyor-General's Office	46·83

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 85, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers; t, thunder; <, lightning.

METEOROLOGICAL OFFICE, GOVT. OF INDIA; J. H. GILLILAND,

Calcutta, the 27th August 1894. *For Meteorological Reporter to the Govt. of India.*

* Mean for 6 days.

Explanation.—Summary—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the
The *humidity* of the atmosphere is expressed at percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The
mean are the numerical means or average of the rainfall in that district determined from the returns sent in by the [illegible] monitors
stations in the district sending in returns divided by the number of stations.

for the week ending Saturday, the 25th of August 1894.

Variation from normal mean.	Mean 8 A.M. temperature.	Average humidity at 8 A.M.	Average cloud amount at 8 A.M.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. OF WEEK. Mean for district.	Normal mean.	Average number of rainy days.	Normal number of rainy days.	RAINFALL. Since 1st of month. Mean for district.	Normal mean.	Variation.	Since 16th May 1894. Mean for district.	Normal mean.	Variation.	District.

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received the corresponding space is left blank. If any of the returns are omitting the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 10 inch of rain has fallen.

CALCUTTA, *the 28th August* 1894.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 25TH OF AUGUST 1894.

DURING the previous week a barometric depression had passed through Bengal, moving in a west-north-westerly direction, but without intensifying in any way. It had then advanced to near Nowgong, and on the last day of the week it was rapidly filling up, so that on the 19th or the first day of the present week it had practically ceased to exist. In the rear of the feeble depression, however, a steady and fairly strong monsoon current was blowing, and hence at the close of the past week the monsoon conditions were fairly strongly developed over Bengal. On the 19th or the first day of the present week pressure was rising slowly, but it was still comparatively low in West Bengal and Chota Nagpur, where there was a tendency for a feeble low pressure area to be produced. Ordinary monsoon winds however, continued to flow in over the province, and rainfall was fairly general except over parts of Bihar and Orissa. On the 20th pressure had fallen slowly in South Bengal and Orissa, while elsewhere it had risen, and hence the tendency to the formation of a depression was somewhat more marked, while there was also a feeble tendency for winds to circulate round the low pressure. On the 21st pressure rose briskly over the whole province, the increase usually equalling from 0·07 inch to 0·09 inch; the very feeble depression in the south-west of the province quite disappeared, and pressure also became in excess by small amounts at practically all stations. This increase of pressure continued on the 22nd, the rise at the south-eastern stations equalling 0·08 inch, and pressure hence became above the normal by rather large amounts, the excess being larger than a tenth of an inch at a few of the south-eastern stations. On the 23rd the increase of pressure had continued at all except a few of the north-eastern and eastern stations, and pressure was more largely in excess than on the 23rd. On the 24th the pressure changes were small, and the general pressure distribution was practically unaltered, while on the 25th, or the last day of the week, a small increase in pressure had again occurred, and pressure was therefore very considerably above the normal, the excess ranging up to more than a tenth of an inch at many stations.

The pressure changes therefore during the greater part of the week have been towards the establishment of a pressure distribution which is decidedly unfavourable for the free flow of the monsoon current over Bengal. For the greater part of the week, however, notwithstanding the adverse pressure conditions, the monsoon current has continued to give good general rain over almost the whole province, and on the last day or two particularly heavy rain was received at the eastern and northern stations. There were, however, at the close of the week very distinct indications of the falling off in strength of the current, and winds at the inland stations had become very light, though at the head of the Bay moderate monsoon winds were blowing. The pressure and other conditions, however, which obtained over Bengal at the close of the week, were those which usually precede a short break in the rains.

Pressure.—Owing to the large increase of pressure during the second half of the week, and to the establishment of the high pressure area, the mean pressure for the week has been in very considerable excess. This excess has been largest in the south and east of the province, where it has equalled about 0·03″ and 0·04″, while it has been smallest in the extreme west of the province, where it has equalled about 0·02″. In Assam the mean pressure has been about 0·03″ above the normal.

Temperature.—Owing to the fairly abundant rainfall during the week, the mean temperature has generally been decidedly below the normal, and the defect for the whole province has averaged 1·3°. The largest defects have been registered in East Bengal, where they have slightly exceeded two degrees, while in South-West Bengal, North Bengal and Bihar they have equalled about a degree and-a-half.

In Assam the general defect for the week has equalled about 2°.

Rainfall.—Very heavy rain has been received in East Bengal, the stations in which have averaged nearly seven inches during the week or a fall twice as large as usual. In North Bengal an average fall of four and a half inches is reported, or nearly two inches more than usual, and in Bihar an average of nearly four inches has been received, or more than an inch in excess. Falls of rather more than three inches have been recorded in South-West Bengal and Chota Nagpur equal to about the usual amount, while Orissa has received rather less than two inches, or about thirty per cent. less than usual.

Expressed as percentages of the normal rainfall, the actual falls during the week have equalled the following amounts:—South-West Bengal 112 per cent., North Bengal 171 per cent., East Bengal 208 per cent., Bihar 154 per cent., Orissa 69 per cent., and Chota Nagpur 95 per cent. Taking each Division to have an equal value in the calculation, the rainfall of Bengal for the week has equalled 134 per cent. of the normal fall.

In the case of the smaller districts exceedingly heavy falls have been received in the districts of Burdwan, Midnapur, Murshidabad, Rajshahi, Jalpaiguri, Dacca, Mymensingh, Faridpur, Tippera, Noakhali, Saran, Champaran, Darbhanga and Sonthal Parganas. On the other hand the falls have been comparatively light in Bankura, Hooghly, Howrah, Calcutta, Nadia, Cuttack, Balasore and Puri.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 25th of August 1894:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1894.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

RESOLUTION ON THE ANNUAL GENERAL ADMINISTRATION REPORT OF THE RAJSHAHI DIVISION FOR THE YEAR 1893-94.

GENERAL DEPARTMENT.—MISCELLANEOUS.

Calcutta, the 4th September, 1894.

RESOLUTION—No. 2962.

READ—

The Annual General Administration Report of the Rajshahi Division for the year 1893-94.

The Lieutenant-Governor considers that Mr. Nolan's Report on the Rajshahi Division is an extremely useful and interesting document. Mr. Nolan has hit the happy mean as to length; the statistical information is well compiled and explained by the letterpress; and the Report contains many remarks and suggestions which are the result of trained experience, and well deserve the attention of all District Officers.

2. In six of the seven districts of the Division, the Magistrate and Collector was unchanged throughout the year, with the exception of a brief interval of privilege leave. The Division therefore enjoyed an unusual immunity from the vicissitudes usually due to ill-health, ordinary furlough, and promotion. The favourable reports of the work done by Mr. Tute, Colonel Boileau, and Mr. Greer merit the recognition of Government.

3. The Lieutenant-Governor calls attention to Mr. Nolan's remarks in paragraph 8 on the desirability of laying out the tours of Subdivisional Officers with a view to carrying on special enquiries, and fixing them "so as to interfere as little as possible with the hearing of judicial cases." He desires all Collectors to give specific instructions to Subdivisional Officers as to what they should inspect during their tour.

4. The information given in Section IX, as to the Trade and Commerce of the Division, is important, as helping to confirm and correct the impressions received by District Officers as to the well-being or otherwise of the people and the character of the crops. The statistical tables have been compiled with great clearness and ability.

5. The Commissioner's remarks in paragraph 39 on the conduct and condition of the Police are weighty, but gloomy. He recognises in "other branches of the administration a progress which in the case of the Police is not discernible." Bad traditions prevail not only in the force, but also among the public as regards what is to be expected from the force. The treatment of police officers in regard to punishment and promotion must be made to accord with that which is prevalent in other departments. "The record of punishments inflicted from year to year on an officer who has risen by slow steps to the top of his service and occupies a position of great trust, often reads like the history of some notorious criminal. The promotions also have not the regularity which elsewhere gives an assured prospect to public servants." Sir Charles Elliott commends these observations, and the whole paragraph, to the careful attention of the Inspector-General of Police and of all District Magistrates and Commissioners.

6. The Lieutenant-Governor concurs in the views expressed by the Commissioner in paragraph 66, that young Sub-Deputy Collectors should be more commonly put in charge of the treasury, or excise, or engaged in trying petty criminal cases, instead of being at once employed on settlement work, since the fixing of judicial rents is more difficult work than these are, and requires more experienced men.

7. The largest estates under the Court of Wards were those of the Dighapatia brothers, which were released during the year. Mr. Nolan's account of these young gentlemen (in paragraph 71), and the training they have received, is encouraging. Altogether over Rs. 31,000 were spent in material improvements in these estates, and the Lieutenant-Governor would have been glad if more information had been given as to the nature of these improvements. The same point should be borne in mind in writing of the management of Government estates or khas mahals, where a special grant is always made by the Board for this purpose.

8. The outlay in tanks and wells recorded in paragraph 81 is very satisfactory, but the Lieutenant-Governor would have been glad to hear what the District Boards have separately done in this direction, apart from private liberality. Attention is drawn to the remarks in paragraph 100 on ferries. His Honour agrees with Mr. Nolan that as a rule the District Board (or the Government if it is a Government ferry) should supply the ferry boat and the platforms of access to it, as the wants of public traffic are not likely to be well served if these are provided by a farmer who has only a temporary tenure of the lease.

9. Mr. Nolan's paragraph 103 on the state of public feeling deserves attention. His remark that those who know English tend to constitute a caste whose exclusive privilege it is to hold public offices and to criticise Government is acute, and helps to explain the increasing prevalence of a criticism which is less candid and intelligent than might have been expected.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Secretary to the Government of Bengal.

ANNUAL GENERAL ADMINISTRATION REPORT OF THE RAJSHAHI DIVISION FOR 1893-94.

No. 537Rct., dated Darjeeling, the 30th June 1894.

From—P. NOLAN, Esq., Commissioner of the Rajshahi Division,

To—The Secretary to the Government of Bengal, General Department.

I HAVE the honour to submit the General Administration Report of the Rajshahi Division for the year 1893-94.

I.—CHARGE.

2. The following officer was in charge of the Division during the year:— (a) Division.

P. Nolan, Esq.

3. The subjoined statement gives the names of the officers who were in charge of the districts of the Division during the year under report:— (b) Districts.

DISTRICTS.	Officers.	For what period (both days inclusive).
1	2	3
Rajshahi ...	Mr. J. C. Price ...	From 1st April 1893 to 31st March 1894.
Dinajpur ...	,, A. C. Tute ...	Ditto ditto ditto.
Jalpaiguri ...	Lieut.-Col. H. Boileau ...	From 1st April 1893 to 23rd August 1893, and again from 27th October 1893 to 31st March 1894.
	Mr. B. B. Newbould ...	From 24th August to 26th October 1893.
Darjeeling ...	,, R. M. Waller ...	,, 1st April to 8th July 1893.
	,, H. G. W. Herron ...	,, 9th July to 4th August 1893.
	,, R. T. Greer ...	,, 5th August 1893 to 31st March 1894.
Rangpur ...	,, E. B. Harris ...	,, 1st April 1893 to 31st March 1894.
Bogra ...	,, A. E. Harward ...	Ditto ditto ditto.
Pabna ...	Kumar Gopendra Krishna Deb	Ditto ditto ditto.

4. The statement below gives the names of the officers who were in charge of subdivisions in the several districts during the year:— (c) Subdivisions.

DISTRICTS.	Subdivisions.	Officers.	For what period (both days inclusive).
1.	2	3	4
Rajshahi ...	Nator ...	Babu Jnanendra Nath Lahiri	From 1st April 1893 to 31st March 1894.
	Naugaon ...	,, Ganendra Nath Pal ...	Ditto ditto ditto.
Dinajpur ...	Thakurgaon ...	,, Baroda Kant Ganguli ...	From 1st April to 16th July 1893.
		,, Purna Chandra Gupta	,, 17th July 1893 to 31st March 1894.
Jalpaiguri ...	Alipur ...	Mr. W. H. W. Mackenzie ...	,, 1st to 22nd April 1893
		Babu Fatick Chandra Dass, Sub-Deputy Collector.	,, 23rd to 28th April 1893.
		Babu Nibaran Chandra Ghattuck.	,, 29th April 1893 to 31st March 1894.
Darjeeling ...	Kurseong ...	Mr. B. B. Newbould ...	,, 1st April to 18th August 1893.
		,, H. G. W. Herron ...	,, 19th August to 8th November 1893.
		,, L. F. Morshead ...	,, 9th November 1893 to 31st March 1894.
	Siliguri ...	,, P. T. Rebello ...	,, 1st April to 4th October 1893, and again from 25th October 1893 to 31st March 1894.
		Babu Benode Behari Sarkar	,, 5th to 24th October 1893.
	Gaibanda ...	,, Ganga Narayan Ray ...	,, 1st April to 12th November 1893.
		,, Jogendra Nath Bandopadhaya.	,, 13th November 1893 to 31st March 1894.
	Nilphamari ...	,, Akhoy Kumar Chatterji	,, 1st April to 13th June 1893.
		,, Akhoy Kumar Bose ...	,, 14th June 1893 to 31st March 1894.
Rangpur ...	Kurigaon ...	,, Priya Nath Mukerjee	,, 1st to 2nd April 1893.
		,, Jagat Durlav Bysack	,, 3rd April 1893 to 14th March 1894.
		,, Jagat Chandra Bose ...	,, 15th to 31st March 1894.
Pabna ...	Serajganj ...	Mr. N. D. Beatson-Bell ...	,, 1st April to 13th September 1893.
		,, C. A. Bell ...	,, 14th September 1893 to 31st March 1894.

II.—TOURS AND INSPECTION OF OFFICES.

(a) Commissioner's tour.

5. I spent the early part of April in the Duars, where I inspected the Falakata tahsil, the Alipur Subdivision, and the Buxa Cantonment, dealing also with certain points connected with the settlement then in progress. About the middle of the month I met the Lieutenant-Governor at Kuch Bihar, and afterwards accompanied him to Buxa and Jalpaiguri, thus taking His Honour through the district from south to north and from east to west. At Buxa Sir Charles Elliott met an envoy from the Tonsa Penlop, and came to an understanding, subsequently confirmed by the Government of India, on the points in dispute as to the Bhutan frontier, which had been recently surveyed. No objection has since been taken to the arrangements made by the Government of Bhutan. During the rains I inspected the district of Rangpur, the subdivisions of Serajganj, Kurigram, and Kurseong. After the monsoon I visited Gantok and there reviewed with the Assistant Political Officer the questions pending as to the administration of Sikkim. I also communicated with the members of Council and all chief officials of the State. I descended from the hills by the Daling Pass, now traversed by an excellent bridle path, arriving in the centre of the Jalpaiguri tea tract. I was much struck by the excellence of the cultivation and the prosperous appearance of the coolies in the different gardens I visited. After making some stay at Jalpaiguri I inspected Pabna, Rampur Boalia, the territorial jurisdiction recently created in Dinajpur, the head-quarters of that district and Thakurgaon, returning to Jalpaiguri for the transaction of business. During my march I saw a good deal of the country, and paid special attention to the working of the police and chaukidars. I spent more than three weeks at Jalpaiguri, and then made a second tour in the Duars, where I inspected Falakata tahsil again and the Mainaguri tahsil, also the Salbari and Mainaguri thanas. In March I inspected the Siliguri, Nilphamari, Naugaon, and Nator subdivisions, the Jaipur and Gourgram settlements, and Bogra district, where I spent the last days of the official year. The only subdivision or district I failed to visit was Gaibanda. As I had spent an unusual time in it during each of the two preceding cold seasons, and it is not on any line of march, I thought it possible to omit it from my programme on this occasion.

I spent altogether 128 days on tour.

(b) Tours of District Officers.

6. The statement below shows the period spent on tour by each District Officer:—

Districts.	Officers.	Period spent on tour.		Remarks.	
		Months.	Days.		
1	2	3	4	5	
Rajshahi ...	J. C. Price, Esq.	4	8		
Dinajpur ...	A. C. Tute, Esq.	3	16	Months.	Days.
Jalpaiguri ...	Lieutenant-Colonel H. Boileau ...	3	5	3	7
	B. B. Newbould, Esq. ...	...	2		
Darjeeling ...	R. M. Waller, Esq.	...	9	3	27
	R. T. Greer, Esq.	3	18		
Rangpur ...	E. B. Harris, Esq.	4	3		
Bogra ...	A. E. Harward, Esq. ...	2	28		
Pabna ...	Kumar Gopendra Krishna Deb ...	3	2		

The tours exceeded the minimum limit prescribed in every case, except that of Mr. Harward who suffered from bad health.

The District Officers enquired as to the condition of the people and the state of crops, inspected the roads, subdivisional offices, jails, dispensaries, thanas and outposts, municipalities, excise shops and ganja golas, sub-registry offices, pounds and ferries, wards' estates, tahsil offices, and settlements, where there were any, and the working of the new Chaukidari Act.

In the rains Mr. Price prosecuted his tours in a boat, thereby having easy access to, and visiting places to which no roads lead, and which are difficult of approach in the dry weather. During his inspection of Rampur Boalia and Nator Municipality he specially considered the distribution of work among the Municipal Commissioners, the assessment, collection and arrears of municipal taxes. He spent more than a week at Nator in August, enquiring judicially into the circumstances of a riot inside the Rajbari during which a man was killed. Mr. Tute prosecuted enquiries as to the condition of the cattle, which eventually resulted in his getting up a movement to import Burma cattle into Dinajpur. He opened a new dispensary at Bochaganj founded by Rai Setab Chand Nahar Bahadur, which was specially brought to the notice of Government. On the 10th January Colonel Boileau paid the annual subsidy to the Bhutan Government. Mr. Waller inspected the West Tista Khas Mahals in connection with their resettlement and visited the Maharaja of Sikkim at Kurseong in June, and Mr. Greer also visited the Maharaja in December, and in January tested the maps of the Terai jotes on the ground, examined the workings of the Terai Patrol Police Scheme and the Chaukidari Act. Mr. Harris and Kumar Gopendra Krishna Deb visited every part of their respective districts and inspected all the settlements in progress. Kumar Gopendra Krishna visited all the Government and resumed estates under khas management and also enquired into several boundary disputes in respect of land which, though appertaining to certain Government estates, were claimed by private proprietors.

Except in the case of the officer whose health, as has been stated, obliged him to curtail his tour, and also diminished its usefulness, I am satisfied that every Collector performed this part of his work with efficiency and success.

(c) Tours of Joint and Assistant Magistrates.

7. The following table shows the periods spent on tour by Joint and Assistant Magistrates:—

Districts.	Officers.	Period spent on tour.		Remarks.
		Months.	Days.	
1	2	3	4	5
Rajshahi ...	L. Palit, Esq., Joint-Magistrate	...	13	
Jalpaiguri ...	B. B. Newbould, Esq., Joint-Magistrate	3	23	
Darjeeling ...	H. G. W. Herron, Esq. ...	1	10	
Rangpur ...	F. McBlaine, Esq.	...	12	

The object of Mr. Palit's tour was to test the works of the Batwara amins; he happened to be at the time in charge of the Batwara Department as Partition Deputy Collector. Mr. Herron was too short a time at Dinajpur to be out on tour. In October Mr. Newbould was out for a day to make a local enquiry as to a sensational cow-killing case between the Muhammadans and the Marwaris at Damdim. From 14th December 1893 to 31st March 1894 he was placed in charge of the territorial subdivision at Mâl, where he tried criminal cases and rent suits arising within the jurisdiction of that subdivision. He also inspected some of the Government roads and markets. Mr. Herron, who was employed at the Sadar station of Darjeeling, also held charge of the Kurseong office from 19th August to 8th November. The period during which he was absent from the head-quarters was mainly spent in travelling to and from Kurseong. He spent two days in June in inspecting the excise office at Kurseong, two days in January in inspecting the excise shops at Batamtom, and three

days in March in inspecting the ganja warehouses and excise office at Siliguri. During the period Mr. McBlaine was in camp he visited Kakina, Tusbhundar, and Bhotnari, and made enquiries about chaukidari matters.

8. The following statement shows the period spent on tour by the Sub-divisional Officers:—

(*d*) Tours of Subdivisional Officers.

Subdivisions.	Officers.	Period spent on tour.		Remarks.
		Months.	Days.	
1	2	3	4	5
lator ...	Babu Jnanendra Nath Lahiri ...	3	10	
laugaon ...	Babu Ganendra Nath Pal ...	3	9	
hakurgaon ...	Babu Baroda Kanta Ganguli ...	1	...	
	„ Purna Chandra Gupta ...	2	27	
		3	27	
lipur ...	Babu Nibaran Chandra Ghatak...	3	29	
urseong ...	B. B. Newbould, Esq. ...	1	19	
	H. G. W. Herron, Esq. ...	...	...	
	L. F. Morshead, Esq. ...	2	6	
		3	25	
liguri ...	P. T. Rebello, Esq. ...	3	17	
	Babu Benodo Behari Sarkar ...	...	1	
		3	18	
urigram ...	Babu Jagat Durlabh Bysack ...	3	2	
ibanda ...	Babu Ganga Narain Roy ...		22	
	„ Jogendra Nath Bandyapadhaya.	2	21	
		3	13	
lphamari ...	Babu Akhoy Kumar Chatterji	...	7	
	„ Akhoy Kumar Bose ...	2	20	
		2	27	
ajganj ...	N. D. Beatson-Bell, Esq. ...	...	29	
	C. A. Bell, Esq. ...	2	28	
		3	27	

All the Subdivisional Officers except Babu Akhoy Kumar Bose, whose camping fell short by three days only, made tours of the prescribed length. Babu Akhoy Kumar attributes the deficiency to an attack of fever in December—an explanation which does not appear to be very satisfactory, as he could have made up the arrears in the three months following.

In regard to the employment of Subdivisional Officers on tour, the Collector of Rangpur remarks that they visited all parts of their subdivisions

and inspected schools, outstills, fairs, &c., looked into chaukidari matters, and did their usual criminal business.

I do not myself attribute the same importance to subdivisional as to district tours. The former were necessary when the officers in charge were young Europeans, who had to learn the ways of the country and to perform much of the executive work now entrusted to Boards. Under existing conditions it is very desirable that the Collectors should see that the tours of their subordinates are so arranged as to interfere as little as possible with the hearing of judicial cases, and that a full equivalent is obtained for the inconvenience of this nature which is inevitable. I should certainly like to see greater signs of specific advantage derived from the subdivisional tours. They seem to yield little fruit. I will suggest that during the coming touring season Subdivisional Officers revise the lists of chaukidari panchayats village by village, test the accuracy of the mortuary returns, and examine the income-tax assessment, noting any alterations to be proposed for the ensuing year.

(e) Inspection of district and subdivisional offices and treasuries.

9. The table below shows the number of inspections of district and subdivisional offices and treasuries made by the Commissioner and District Officers during the year:—

Districts.	District and subdivisional offices and treasuries.	Inspection of district and subdivisional offices made by—		Inspection of treasuries and subtreasuries made by—	
		Commissioner.	Collector.	Commissioner.	Collector.
1	2	3	4	5	6
Rajshahi ...	Rajshahi ...	1	2	1	2
	Nator ...	1	3	1	3
	Naugaon ...	1	1	...*	1
Dinajpur ...	Dinajpur ...	1	2	1	2
	Thakurgaon ...	1	2	1	2
Jalpaiguri ...	Jalpaiguri ...	1	2	1	2
	Alipur ...	1	1	1	1
Darjeeling ...	Darjeeling ...	1	2	1	2
	Kurseong ...	1	2	1	2
	Siliguri ...	1	2	1	2
Rangpur ...	Rangpur ...	1	2	1	2
	Gaibanda ...	...	2	...	2
	Nilphamari ...	1	2	1	2
	Kurigram ...	1	2	1	2
Bogra ...	Bogra ...	1	1	1	1
Pabna ...	Pabna ...	1	2	1	2
	Serajganj ...	1	2	1	2

* The treasury was closed on the day when I inspected the offices.

From the foregoing table it will be seen that all the Collectors observed the standing orders of Government in respect of the inspection of their own and subdivisional offices, treasuries and sub-treasuries, with the exception that the District Officers of Rajshahi and Jalpaiguri did not inspect the Naugaon and Alipur subdivisional offices and treasuries, and that the Collector of Bogra did not inspect his own office and treasury twice, as required by the rules. Mr. Price and Colonel Boileau have furnished no explanation as to their failure to inspect twice the Naugaon and Alipur offices respectively. Mr. Harward was ill, and could not inspect either the office or the treasury during the second-half of the year.

The result of the inspections was generally satisfactory.

In the subdivision of Nator it was ascertained that the poddar had received money irregularly, keeping it in his own hands for a time and afterwards

crediting it to Government. For this he was dismissed, and the head clerk was degraded for failing to stop a practice so irregular and dangerous.

III.—WEATHER AND CROPS.

(*a*) Weather.

10. At the commencement of the official year the ground was unusually moist owing to copious showers in the preceding month. In April the rainfall was heavy and the temperature cool. The following figures show that in May and June the conditions of the different districts varied greatly:—

Districts.	May.		June.	
	Actual rainfall.	Variation from normal.	Actual rainfall.	Variation from normal.
1	2	3	4	5
Rajshahi	11·30	+ 5·43	17·94	+ 6·74
Dinajpur	7·91	+ 1·81	16·57	+ 2·95
Jalpaiguri	5·88	— 6·08	15·33	—13·09
Darjeeling	7·90	— 2·95	26·56	— 2·55
Rangpur	5·51	— 5·72	19·80	— 1·50
Bogra	12·54	+ 4·75	15·37	+ 2·60
Pabna	16·14	+ 9·03	17·97	+ 6·82

It will be observed that there was an excessive rainfall in the southern districts, Pabna, Rajshahi, and Bogra, accompanied by some defect in the north of the Division. During the remaining part of the monsoon the rainfall was everywhere sufficient, without being so great as to cause floods. It closed somewhat early in October, and the cold season was very dry.

(*b*) Crops.

11. The heavy rain in the beginning of the year seems to have damaged the jute crop in Pabna, Bogra, and Rajshahi, where it is estimated at 12 annas only; elsewhere it was up to the average. The bhadoi rice was also poor in these districts, and was good only in Rangpur and Dinajpur. Taking the Division as a whole the outturn of bhadoi rice was 13·8 and jute 14·6 annas only.

The heavy rainfall was favourable to the winter rice crop, and the outturn is variously estimated from 15·5 annas in Jalpaiguri and Darjeeling to a bumper crop in Dinajpur, giving a divisional average of a little over 17 annas.

The rabi crops were more or less injured by the failure of the cold-weather rains. Tobacco was adversely affected by the same climatic conditions. Its divisional outturn may be estimated at 12·5 annas. Sugarcane was injured by the excessive rainfall during the monsoon season, and it is estimated to have yielded a crop of 12·5 annas.

The ganja crop in Rajshahi gave a poor outturn (10 annas) owing to the failure of the cold-weather rains.

I commented in last year's report on the tendency among those who originally supply estimates of crops to use the accepted common measure of annas in the commercial and popular as distinguished from the official sense, and of District Officers to fail in making the necessary translation. I believe that this still continues and affects the published estimates, at least in regard to certain localities.

IV.—PUBLIC HEALTH.

12. The following table shows the mortality of the year in the several districts of the Division as compared with the preceding year:—

NAMES OF THE PREVAILING DISEASES OR OTHER CAUSES.	RAJSHAHI.				DINAJPUR.				JALPAIGURI.				DARJEELING.			
	Number of deaths reported.		Deaths per mille.		Number of deaths reported.		Deaths per mille.		Number of deaths reported.		Deaths per mille.		Number of deaths reported.		Deaths per mille.

There has been an increase in reported mortality in Rajshahi, Bogra, and Pabna, the three southern districts in which the rainfall was excessive. The Collector of Rajshahi states that the close of the rains was followed by a serious epidemic of fever all over the district both in the Barind and in the low lands. In Bogra the increase is nominal, and registration there is so defective that no inference can be drawn from the variation. There was a very large increase in deaths from cholera in Pabna. On the other hand, health was better in the Terai districts of Jalpaiguri, Dinajpur, and Rangpur. The health of the Darjeeling district underwent little change.

The returns can be considered as useful only for the purpose of comparing the results of one year with those of another, on the assumption that in each district the defects in registration are uniform. It must not, for instance, be supposed that because Rajshahi shows a mortality of 43 per thousand and Rangpur of 26 per thousand therefore the former district is the more unhealthy. On the contrary it is probably the better of the two, and the real rate in each may very well have exceeded 45 per thousand. According to the census Rangpur has declined in population during the last 20 years, and this result could have been attained in a country where food is abundant and early marriage a universal custom only by a mortality such as I have indicated. Neither can I attach much value to the classification of deaths which is made by the chaukidars—men who have not the habit of accuracy or any motive for careful discrimination. According to the returns nearly all the deaths are caused by fever. The observations so accurately made in our jails show very different results. If we could trust the reports we would have to believe that bowel-complaints are hardly ever fatal in Rajshahi, whereas they notoriously cause a large proportion of the deaths: many are doubtless set down as caused by cholera; others are brought under the general head of fever.

(a) Accidental and sudden deaths.

13. The figures showing the total number of accidental and sudden deaths in 1893 were as follows:—

Districts.	Men.	Women.	Children.	Total.	Total figures of 1892.	Remarks.
1	2	3	4	5	6	7
Rajshahi	298	478	69	845	894	
Dinajpur	191	223	325	739	787	
Jalpaiguri	96	51	97	244	265

V.—MATERIAL CONDITION OF THE PEOPLE.

16. For most administrative purposes the Rajshahi Division may be divided into four regions. On the north is the Himalayan range, which stretches to the plains from the line of perpetual snow dividing the watershed of India from that of Tibet, and is inhabited by races of Mongolian origin or connection. The Deputy Commissioner considers that the labourers in this tract

are as a rule well off. The cultivators he describes as happy and contented when undisturbed by contact with outsiders "and free from the iron fetters of the money-lender." I have observed that authorities as experienced as Sir John Edgar and Mr. Paul have agreed in attaching great importance to the evil done by usurers in the hills, and I quite concur in thinking that the precautions against the abuse of power by this class found useful elsewhere should be extended to Darjeeling; but I hold that modern influences, including that of commercial credit, enforced in regard to just debts by the ordinary courts, have on the whole operated for good in Darjeeling. The population in the hills has increased by 61 per cent. during the last decade, partly by the natural growth which is one of the most obvious signs of prosperity, partly by immigration from Nipal, Bhutan, and Tibet—a movement which indicates the opinion of the people themselves as to the comparative advantages of two rival systems. I should certainly classify the cultivators of the hill tracts, including Sikkim, as prosperous according to the Himalayan standard. They live in a stimulating climate under a Government the protection of which they or their ancestors have in most cases voluntarily sought, and their industry is fairly remunerative. Immediately to the south of the hills, enclosed between them and the rising ground of the Barind, lies an extensive tract of Terai country, including Jalpaiguri and part of the districts of Darjeeling, Rangpur, and Dinajpur. Throughout this tract the raiyats have always enjoyed a full measure of tenant-right, including the privilege of free sale, and their holdings are sufficiently large to yield a comfortable subsistence. They are probably as well off as any members of their class in India. Labourers are few in number and the wages sufficient to attract immigrants from distant places. In the Darjeeling Terai the holdings are too large to be cultivated by one family, their size having been regulated by the facility for clearing jungle attaching to a system of extensive grants to men of some capital, and this has caused the growth of a class of under-raiyats imperfectly protected by the law, and described by the Deputy Commissioner as little better off than labourers. It must, however, be remembered that even labourers are, comparatively speaking, well paid in the Terai. The ease with which subsistence is obtained in this part of the Division is hardly a subject for congratulation with reference to its cause. Population has there attained the stationary state, or, more correctly speaking, there is a slight tendency to a decrease, not entirely counteracted by immigration. All the inhabitants suffer more or less from malaria, and the majority have as a consequence some constitutional disease, such as enlarged spleen. It is this that prevents wages being kept down and holdings unduly subdivided under the influence of competition. The Barind is a slightly elevated country, of older formation than the alluvial plains of Bengal, stretching through parts of Rangpur, Rajshahi, Dinajpur, and Bogra. It seems subject to great vicissitudes both as regards health and the success of cultivation, and shows signs of having at one time supported in prosperity a much larger population than it could now maintain. In recent years the tendency is towards the partial restoration of its former satisfactory condition; the raiyats are increasing in numbers, and though ignorant are not poor. On the south of the Division lies the favoured plain of the Ganges, where the most intelligent part of the population has established itself to enjoy the greater amenities which life there presents. It is there that cultivators and labourers feel the pressure of population on the means of subsistence. The crops, moreover, were below the average this year, and the high price of food affected the landless classes. Here, too, the owners of fixed incomes are found in the greatest number; they all suffer from the depreciated value of the rupee.

VI.—EMIGRATION AND IMMIGRATION.

17. (*a*) Emigration. The District Officers have not observed any emigration during the year, except a little from Darjeeling on military or police service. Two hundred Nepalis were engaged in that district for labour on the tea gardens of Chittagong. It appears, however, from the census report that there is considerable emigration from Rangpur to Assam, Kuch Bihar, and Jalpaiguri, apparently for the purpose of reclaiming waste, 55,774 natives of Rangpur having been registered in those places. Nearly eleven thousand persons born in Dinajpur were entered in the

Sonthal Parganas—a clear proof that many descendants of the colonists that district sends forth return to their original country. If the District Officers would refer to the census report before dealing with this subject their remarks would be more to the point. The immigrants found in the Division on the night of the 29th February 1891 numbered 436,239. They may be divided into three classes—in the first are to be placed what the planters call "cold-weather birds," who come from the west at the commencement of the healthy season and return with their earnings before the rains set in. These I estimate at 124,933. Then there are the coolies employed on tea estates, who come to stay a few years only, but often remain for life. Lastly, there are the cultivators, permanent settlers, by whom the waste land of Darjeeling, the Terai, and the Barind is being rapidly reclaimed. The two latter classes are not easily distinguished in the census returns, as they include many persons from the same districts. Taken together, they number 311,306. The following statement shows the places from which the immigrants come:—

Native Province.	Immigrants.		
	Male.	Female.	Total.
1	2	3	4
Kuch Bihar	23,855	20,557	44,412
Nepal	61,248	47,275	108,523
Bhutan	1,451	1,427	2,878
Sikkim	3,110	2,946	6,056
Sonthal Parganas and Chota Nagpur ...	37,648	31,348	68,996
Bihar	72,107	21,275	93,382
North-Western Provinces ...	21,269	4,692	25,961
Central India	2,046	2,204	4,250
Punjab	1,205	135	1,340
Bengal	49,182	29,740	78,922
All other places	801	718	1,519
Total ...	273,922	162,317	436,239

18. The following statement shows in what districts the immigrants settle, those only being counted as immigrants who come from other divisions:—

(b) Immigration.

Districts.	Total population.	Immigrant population.	Percentage of population which has immigrated.	Remarks.
	2	3	4	5
Rajshahi ...	1,313,336	42,013	3·2	
Dinajpur ...	1,555,835	79,207	5·09	
Jalpaiguri...	681,352	98,611	14·5	
Darjeeling...	223,314	119,769	53·6	
Rangpur ...	2,065,464	36,685	1·8	
Bogra ...	817,494	23,670	2·9	
Pabna ...	1,362,392	37,284	2·7	
Total	8,019,187	436,239	5·4	

It will be observed that the current of emigration sets from west to east, and this is true of Upper India generally. The surplus population of the

healthier tracts flows to those malarious districts where sickness is always making room for more.

The large proportion of the population of the northern districts, Darjeeling Jalpaiguri, and Dinajpur, which consists of immigrants is worthy of notice.

VII.—PRICE OF FOOD AND LABOUR.

(a) Prices of food.
(b) Prices of labour.

19. The staple food-grains of the country, and in particular of common rice, continued during the year to sell at what in the last generation would have been thought the famine rate of twelve to fourteen seers the rupee. This is not due to any deficiency in the local harvests, which for two years have been fairly good. There has been partial failure elsewhere, but I have no doubt that the change has been mainly in the value of the rupee. We cannot expect to get as much for a coin worth a shilling as we did for a florin. Wages are also rising, but at a slower rate, and only in some trades and places. In Rangpur, Bogra, and Pabna there has been no increase. Boys and superior carpenters get the same as they did everywhere; in the other occupations a rise may be noticed in one or more of the districts.

VIII.—MANUFACTURES AND MINES.

(a) Manufactures.

20. The manufactured articles used in this Division are for the most part imported, the equivalent being given in rice, jute, tea and other agricultural products. I doubt if the world can show a tract of country with the population of eight millions where so little is produced that requires skill other than that of the cultivator; and I think that the disposition to rely on traffic for the supply of such goods tends to increase rather than to diminish. I observed at the Jalpesh fair in the Duras, where the buyers are all cultivators, that European commodities were most affected by the young. The children's shoes, toys and dolls, for instance, come from England. Some of the most important industries classified as manufactures—those connected with silk, tea and cinchona—are in the hands of European planters, and like the preparation of molasses and sugar are so subsidiary to agriculture as hardly to be counted under any other category. The subjoined table shows the outturn of indigo during the past three years:—

Districts.	1891.	1892.	1893.	Remarks.
1	2	3	4	
	Mds. s. ch.	Mds. s. ch.	Mds. s. ch.	
Rajshahi	1,721 0 0	357 20 0	542 30 0	
Dinajpur	4 0 0	9 4 8	10 0 0	
Rangpur	49 20 0	25 17 10	41 25 0	
Pabna	50 3 12	18 26 8	6 20 0	
Total ...	1,824 23 12	410 28 10	600 35 0	

The year 1893 was more favourable for indigo than the preceding year. The outturn of manufactured silk in Rajshahi was 141,406lbs against 79,900 lbs. Endi cloth (coarse silk) is manufactured in small quantities for home consumption in Dinagpur, Ranjpur, Bogra, and Jalpaiguri. Molasses are manufactured in all the districts. They are largely exported from Rajshahi. Sugar is made at Pachagar in Jalpaiguri, and after meeting the local demands it is

exported to Bhutan and neighbouring districts. Gunnies are prepared in all the districts of the Division and at the Sirajganj Jute Mills on an extensive scale and exported to Calcutta. It is, however, a fact that most of the gunny-bags used are imported. As stated in the previous year's report, cotton cloth is manufactured by hand-looms in Pabna, but this industry is not in a very thriving condition. Brass and bell-metal utensils are manufactured at Kalam in the sub division of Nator of the district of Rajshahi. These articles are said to be exported to other districts. Lotas and other brass utensils are made at Gomnati in the Nelphamari subdivision of the Rangpur district. Brass utensils are also manufactured to a small extent at Pachagar in Jalpaiguri and in Pabna, principally to supply the local demand.

Setalpati mats are made in Bogra and Pabna to meet the small local demand. Satrangies (carpets) are made in the Sadar subdivision of the Rangpur district.

Beer and porter are brewed in Darjeeling.

21. The number of tea gardens in the districts of Jalpaiguri and Darjeeling, the area under cultivation in acres, gross yield in pounds, and the average yield per acre from mature plants, are shown in the following table:—

DISTRICTS.	Number of gardens.			AREA UNDER CULTIVATION IN ACRES.						Gross yield in pounds.			Average yield per acre from mature plants.		
				Mature plants.			Immature plants.								
	1891.	1892.	1893.	1891.	1892.	1893.	1891.	1892.	1893.	1891.	1892.	1893.	1891.	1892.	1893.
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Jalpaiguri	177	183	184	27,201	27,980	33,322	8,406	10,603	9,633	14,731,546	18,278,628	18,524,210	541·5	653·2	555·9
Darjeeling	179	184	184	40,889	40,618	54,808	6,329	5,820	5,304	10,958,000	10,581,601	11,145,074	268·01	260·5	205·2
Total ...	356	367	368	68,090	68,598	87,630	14,735	16,423	14,937	25,689,546	28,860,229	29,669,284	377·2	420·7	338·5

The decrease in average yield per acre from mature plants in Jalpaiguri is attributed by the Deputy Commissioner to the insufficient rainfall and leaf disease. The decrease in Darjeeling is said to be due to the low outturn in the hills, the weather being exceptionally cold and wet. The bushes were also injuriously affected by blight during a greater part of the year.

22. The following statement shows the condition of cinchona cultivation in Darjeeling during the year of report and previous year:—

DISTRICT.		NUMBER OF PLANTS.			GROSS YIELD IN POUNDS.			PROFITS.		
		1891-92.	1892-93.	1893-94.	1891-92.	1892-93.	1893-94.	1891-92.	1892-93.	1893-94.
1		2	3	4	5	6	7	8	9	10
Darjeeling ...	Government Plantation	4,369,971	4,087,650	4,426,000	294,336	304,390	425,010	Rs. 7,963	Rs. 3,171	Not furnished.
	Private ditto ...	1,429,870	1,270,470	200,000	150,000	154,842	8,000	Not available.		
	Total ...	5,799,841	5,358,120	4,626,000	444,336	459,232	433,010	7,963	3,171	...

A decrease is noticeable in the gross yield in the case of private plantations. The most important of them, viz. Nimbong, owned by the Bhutan Cinchona Association, was relinquished to Government during the year, the fall in the price of the drug having rendered the work unprofitable.

(*b*) Mines.

23. No mine was worked during the year. Appendix V is therefore blank.

IX.—TRADE AND COMMERCE.

(*a*) Exports.
(*b*) Imports.

24. The trade of the Division is chiefly with Calcutta. From that port we receive cotton piece-goods and twists, salt, gunny-bags, and kerosine oil, exporting in exchange food-grains, jute, oilseed, tea, silk, sugar, and tobacco. The statistics are registered with care at the different approaches to Calcutta

There was an increase in the steamer traffic under both the heads of import and export. The Sirajganj jute mill worked almost throughout the year without cessation; hence the increase in the export of gunny-bags. The price of raw jute was low for greater part of the year, and to this fact may be attributed the large increase in the export of this article.

(*d*) Trade with Bhutan.

27. No change was made during the year in the system of registering the trade between Jalpaiguri and Bhutan, which continued to be carried on at the three stations of Buxa, Hantoopara, and Ambari. The details of the import and export trade are given in following statement:—

Articles.		Total imported through the different registering stations from— Bhutan. 1892.	1893.	Increase.	Decrease.	Total exported through the different registering stations to— Bhutan. 1892.	1893.	Increase.	Decrease.	Value of total imports. 1893.	Value of total exports. 1893.

The increase in the value of Bhutanese blankets imported, from Rs. 23,991 last year to Rs. 28,643 this year, is worthy of notice. The Deputy Commissioner observes that Bhutanese are showing more activity in bringing their wares for sale; at all fairs numbers of them are to be seen. The Bhutanese blankets owing to their thickness and durability are much appreciated by the poorer people.

(*e*) Trade with Tibet, Sikkim, and Nepal.

28. The trade of the district of Darjeeling with these States continued to be registered in the registering stations. An additional station was opened from 4th November 1893 at Singla for registering traffic with Sikkim carried across the Raman river. The increase in the traffic passing through that part of Sikkim owing to the construction of a bridge over the Raman river warranted the establishment of this registering station as a tentative measure. The principal article of import from Tibet is wool, raw and manufactured, and those of export to Tibet are cotton piece-goods (European), silk piece-goods, tobacco, and wool (manufactured). The chief articles registered as imported from Sikkim during the past year were coal, Indian piece-goods, grain and pulses, other grains, hides, silk piece-goods, and wool (manufactured). The principal articles of export to Sikkim during 1893 were as follows:—European piece-goods, rice, salt, tobacco, and wool (manufactured).

The principal commodities of traffic imported from Nepal were Indian cotton piece-goods, grain and pulses, hides, ghee, and wool (manufactured), and the chief items of export to Nepal during the past year were cotton piece-goods (European and Indian) and tobacco.

29. The following statement shows the details of import from and export to Tibet, Sikkim, and Nepal during 1893 as compared with 1892. There was a considerable increase in the trade with these States on the whole:—

X.—ADMINISTRATIVE CHANGES.

30. The opening of five new offices for the registration of deeds is reported—one at Balurghat in the district of Dinajpur, one at Mithapuker, and one at Kishorganj in Rangpur, one at Sara, and one at Ullapara in Pabna. During the cold weather an experiment was made by deputing a judicial officer in Dinajpur and another in Jalpaiguri to live in camp with territorial jurisdiction over a defined tract of country. The system worked well for the

by rail and water, and are published in the gazette, from which I have had the following tables compiled:—

25. The amount of piece-goods imported should be an index to the degree of prosperity enjoyed by the people, but the trade is affected by other causes with which I am imperfectly acquainted. I regret that I am unable to account for the falling off under this head in all the districts of the Division. No explanation has been offered by the Collectors. It may be that the continued fall in exchange checked imports of this class of commodities, as also of cotton twist and salt. The increase in gunny-bag imports is due to the greater quantity of rice exported.

The increased export of rice is due to the fact that the figures for 1892 were largely affected by the partial failure of the harvest in 1891. In the great staple of jute there has also been a marked increase, particularly noticeable in Dinajpur, Jalpaiguri, and Rangpur, the northern districts. Rajshahi and

Bogra show a great falling off, due to the poor outturn of the crop in these places. As to Pabna I suspect that the entries include much jute coming to Sirajganj from other districts in hanks, and these are re-exported in drums; it is doubtful whether there was any increase in the local produce. There was a marked failure in regard to tobacco.

Sirajganj steamer service.

26. The total quantity and value of the articles carried upwards and downwards by this service during the past two years are shown in the following table:—

	Quantity.		Value.	
	1892.	1893.	1892.	1893.
	Mds.	Mds.	Rs.	Rs.
Export ...	21,46,228	24,86,703	1,37,58,289	1,72,35,047
Import ...	5,15,835	7,72,430	25,88,378	36,25,023

The statement given below shows in detail the import and export trade of Sirajganj and other marts of the Pabna district carried by the Sirajganj steamer service:—

convenience of the localities, but involved in each case the addition of another man to the executive staff, which must have caused a loss in efficiency elsewhere. There is a disposition in more than one of the Government departments to get a special lien on the service of a Deputy Collector in each district as Excise Officer, Treasury Officer, Settlement Officer, and so forth, with the result that no one is available for general duty. This is the great bar to the extension of the territorial arrangement, which is to some extent in conflict with the departmental system. Under this head I may notice the growing difficulty felt by new arrivals in finding house accommodation at the different civil stations, and the consequent pressure for permission to occupy the circuit-house, to the inconvenience of inspecting officers, for whose use these buildings are maintained. Some officers, especially those on small pay, are inclined to avoid the expense of maintaining houses regularly all the year round; they engage for occupation by the month only, and are ready to abandon the arrangement during the camping season, or when they are about to take short leave. When they do so the houses pass to others, and they or their successors find no place in which to live. Under the circumstances Government is occasionally compelled to build houses for its officers. I am by no means sure that this will meet the difficulty, as, when one house is built in this way, there is a probability of another falling out of occupation.

XI.—STATISTICAL ENQUIRIES.

31. No special statistical enquiries of any importance were undertaken during the year.

32. The following statement shows the number of births and deaths registered in the several municipalities in the Division:—

Names of Districts.	Name of Municipality.	Number of births registered—		Number of deaths registered—	
		1892-93.	1893-94.	1892-93.	1893-94.
1	2	3	4	5	6
Rajshahi ...	Rampur Boalia ...	558	725	696	761
	Nator ...	225	239	308	449
Dinajpur ...	Dinajpur ...	214	214	396	382
Jalpaiguri ...	Jalpaiguri ...	141	261	203	246
Darjeeling ...	Darjeeling ...	112	289	204	214
	Kurseong ...	75	93	191	141
Rangpur ...	Rangpur ...	226	240	372	424
Bogra ...	Bogra ...	161	161	268	241
	Sherpur ...	80	82	139	178
Pabna ...	Pabna ...	495	376	475	387
	Serajganj ...	692	637	459	652
	Total ...	2,979	3,317	3,711	4,075

There has been an increase in the number of both births and deaths registered in Rampur Boalia, Nator, Jalpaiguri, Darjeeling, Rangpur, and Sherpur, and an increase of births only in Kurseong. The Dinajpur, Kurseong, and Bogra Municipalities show decrease in deaths, and Pabna and Serajganj show a decrease in births. Generally speaking, there has been an increase in both births and deaths. The increase may be attributed to better registration.

There were 77 prosecutions under Act IV (B.C.) of 1873 in the Darjeeling Municipality and 3 in Kurseong. Sixty-six persons (66 cases) were convicted, and Rs. 47-14 were realized as fines. There were also three prosecutions in Serajganj, and Rs. 4 were realized as fines.

The number of births registered in rural areas in the several districts of the Rajshahi Division during the year 1893-94 and the previous year is shown in the table given below:—

Districts.	Births registered in rural areas—		Population of rural areas.	Births registered per mille—.		Remarks.
	1892-93.	1893-94.		1892-93.	1893-94.	
1	2	3	4	5	6	7
Rajshahi	44,692	52,225	1,282,744	34·8	40·7	
Dinajpur	41,852	66,510	1,543,631	27·1	43·07	
Jalpaiguri	18,294	25,905	671,670	27·2	38·5	
Darjeeling	2,695	3,489	(*b*) 205,647	13·1	16·9	
Rangpur	52,930	81,002	2,041,248	25·9	39·6	
Bogra	(*a*) 25,472	(*a*) 28,789	(*b*) 806,973	31·6	35·6	
Pabna	(*c*) 45,445	(*a*) 53,207	(*b*)1,322,639	34·4	41·22	
Total ...	231,380	311,127	7,874,552	29·4	33·7	

(*a*) These figures are for calendar year.
(*b*) Revised figures.
(*c*) The figures are for official year 1892-93.

Nowhere has the number of births registered reached what is supposed to be the normal rate, 47·8 per mille. In districts where population is stationary or decreasing, such as Rangpur, the death-rate must equal that of births, and if the former has been correctly calculated, it is obvious that our reporting in regard to deaths is generally incomplete.

Measures were taken during the year to ensure the registration of births and deaths occurring on tea estates in Jalpaiguri and Darjeeling, the reports of such events being transmitted in writing by the agency of chaukidars. The Lieutenant-Governor drew special attention to the defective system previously in force in these districts and intimated an expectation that improvement would be effected. In Darjeeling the deaths reported were 40·41 per mille in 1892 and 40·28 in 1893. The proportion is large for a district which includes much healthy country and a population with an unusual number of immigrants in the prime of life. The figures do not suggest that there have occurred many omissions. The Deputy Commissioner observes:—

"The reports do not appear to be untrustworthy. The recent introduction of the Chaukidari Act into the Terai has materially aided the work of collecting vital statistics. Under the orders of Government the Act is not applicable to tea gardens, and managers submit reports regularly. The police have devoted attention to the subject and have visited the registering circles. In the Kalimpong subdivision the khas mahal mandals continue to report vital statistics. The district is now provided as far as can be expected with reporting agencies for recording complete statistics."

As to Jalpaiguri the Civil Surgeon writes:—

"During the year 1893-94, 26,166 cases of births were recorded in district against 19,434 in 1892-93, or a ratio per mille of 38·40 against 29·40 of the previous year. The number of deaths was 22,128 against 20,868 of the previous year, giving a ratio of 32·48 against 30·63 per thousand of population. The ratio of births as compared with that of deaths was 38·40 against 32·48 of 1893-94, and 29·40 against 30·68 of 1892-93. The year under report is the first year in which the ratio of births exceeds that of deaths (by 9 per thousand), which shows that much improvement has been made towards the registration of vital statistics, because from the census of 1881 the population was 582,390, and in 1891 it was 681,349, proving that the population is increasing, whereas up to the present year the number of deaths registered has been in excess of the number of births. The same will be seen as regards the registration in the municipality and in the rural areas as appears in the statement attached. The new scheme has also worked satisfactorily as regards the tea gardens, though,

as this has only been in force for one year, there are no figures for comparison with previous years. The reports have been regularly and punctually received from the tea gardens, and from enquiries I have made from the managers of several gardens, they have told me that they personally supervise the sending of the reports, and that they may be relied upon as correct. The registration has been checked by the vaccination inspecting staff at the various thanas with the following results which have been reported to the Deputy Commissioner from time to time when any discrepancies have been detected, and in those cases where the chaukidars have been found at fault they have been dealt with departmentally by the District Superintendent of Police."

It will be seen from the above that the measures adopted to improve this branch of the district administration have been attended with marked success. Much credit is due to the local officers, and the planters have carried out their agreement in a manner very satisfactory.

Model farms and gardens.

33. A model farm was started in November 1892 at Mynaguri in the Duars for the experimental cultivation of crops. During the year under report a sum of Rs. 502-9 was spent on this farm, and it is estimated that an income of Rs. 214 will be obtained from the sale of the produce. The sericulture in Kalimpong promises to be successful.

XII.—CIVIL JUSTICE.

34. There were altogether 37¼ judicial officers in the Division, namely, 4 District Judges, 6¼ Subordinate Judges and Small Cause Court Judges, and 27 Munsifs. These officers among them disposed of 58,495 suits and examined 78,481 witnesses, *i.e.*, disposed of 1,570·3 suits and examined 2,106·8 witnesses per officer.

The four District Judges disposed of altogether 43 title suits and 2 money suits, and examined 656 witnesses as shown below:—

Names of Officers.	Suits disposed of—		Witnesses examined.	Ratio per cent. of witnesses examined, detained over two days.
	Title.	Money.		
1	2	3	4	5
B. C. Seal, Esq. ...	9	...	119	19·3
D. Cameron, Esq. ...	10	...	357	4·2
A. W. Mackie, Esq. ...	10	2	128	3·9
J. F. Bradbury, Esq. ...	14	...	52	...
Total ...	43	2	656	6·5

The 6¼ Subordinate Judges and Small Cause Court Judges disposed of altogether 5,316 suits and examined 8,360 witnesses, 3·6 per cent. of whom only were detained over two days. Each officer thus disposed of 850·5 suits and examined 1,337·6 witnesses. The number of cases disposed of and that of witnesses examined by each officer on each working day of the year were therefore 3·6 and 5·7 respectively. Of the 5,316 suits disposed of by this class of officers, 922 were contested. Each officer thus disposed of 147·5 contested suits in the year, or ·63 case on each working day.

The District Judges and Subordinate Judges and Small Cause Court Judges together disposed of 5,361 suits and examined 9,016 witnesses against 5,858 suits and 8,771 witnesses in the preceding year, showing a decrease of 497 suits disposed of and increase of 245 witnesses examined. The ratio of witnesses detained over two days per cent. of witnesses examined was 7·1 against 13·7,

and the ratio of cases pending per cent. of cases disposed of was 93·8 against 82·6 in the preceding year.

The details of the work done by the District Judges and Subordinate Judges and Small Cause Court Judges are given in Appendix VI.

There were 27 Munsifs in the Division, the number having been the same in the preceding year. These officers altogether disposed of 35,477 ordinary cases and 17,657 Small Cause Court cases—in all 53,134 against 34,212 ordinary cases and 16,668 Small Cause Court cases—in all 50,880 cases in the preceding year. Of the cases disposed of, 9,069 were contested against 8,797, and 44,065 cases were otherwise disposed of against 42,083 in the preceding year. Thus the same number of Munsifs disposed of 1,265 ordinary cases and 909 Small Cause Court cases—in all 2,254 cases more in 1893 than in 1892. Of these 2,254 cases, 272 were contested, and the remainder, viz. 1,982, were otherwise disposed of. The number of cases disposed of per Munsif was therefore 83·5 more in 1893 than in 1892, the figures of the two years being 1,967·9 and 1,884·4 respectively. The ratio per cent. of cases pending on 31st December 1893 to total disposed of was, however, slightly more than on 31st December 1892, viz. 14·8 against 13·3.

The number of witnesses examined was 69,465 against 69,104, showing an increase of 361 men against the increase of 2,254 cases. The ratio per cent. of witnesses detained over two days to total number examined was 10·4 against 14·8.

The number of cases disposed of by each Munsif was 1,967·9. The number of witnesses examined by each Munsif appears to be 2,572·7. Thus each Munsif disposed of 8·5 cases and examined 11·1 witnesses on each working day of the year. The number of witnesses examined in each case appears to have been 1·3. There were 9,069 contested cases during the year. Thus each Munsif disposed of 335·8 contested cases, *i.e.*, 1·4 contested cases on each working day of the year.

The details of the work done by each Munsif are given in Appendix VII.

35. The following statement compares the work of the year 1893 with that of 1892:—

Districts.	Year.	Number of officers in the district.	Number of cases disposed of—			Increase.	Decrease.	Cases in columns 4 and 5 how disposed of.		Classes of cases in columns 4 and 5.			Number of witnesses examined.	Ratio per cent. of witnesses detained over two days to total number examined.	Ratio per cent. of ordinary and small cause cases pending on 31st December to total disposed of.	Number of cases disposed per Munsif.
			Ordinary.	Small Cause Court.	Total.			Contested.	Otherwise disposed of.	Money.	Rent.	Title.				
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17

Bogra	1893	2	2,970	2,813	5,783	663	...	881	4,902	3,655	1,808	320	5,793	14·0	14·6	2,891·5
	1892	2	2,538	2,582	5,120	...	...	814	4,306	3,423	1,493	204	6,014	22·6	12·7	2,560
Pabna	1893	4½	4,614	5,879	10,493	999	...	2,015	8,478	7,411	2,209	873	15,738	4·2	22·1	2,468·9
	1892	4	4,238	5,256	9,494	...	...	1,956	7,538	6,752	2,180	562	13,818	6·9	24·2	2,373·5
Divisional Total ...	1893	27	35,477	17,657	53,134	2,318	64	9,069	44,065	29,653	20,128	3,353	69,465	10·4	14·8	1,967·9
	1892	27	34,212	16,668	50,880	2,254	...	8,797	42,083	29,440	19,135	2,305	69,104	14·8	13·3	1,884·4

Except in Rangpur, the ratio per cent. of witnesses detained over two days to total number examined was much lower everywhere compared with 1892. In Rangpur the ratio increased from 9·7 to 13·2. The lowest ratio was in Darjeeling (3·9) and highest in Jalpaiguri (23·8).

The number of cases disposed of per Munsif was highest in Bogra (2,891·5), Pabna occupying the second place. But "in Bogra" the District Judge, Mr. Bradbury, writes: "Litigation is comparatively simple;" "it is otherwise with Pabna, where litigation is of a ofally different character, and trials,

notably those of suits of the class of title and other suits, are infinitely more protracted than they are in Bogra." Barring Darjeeling, Jalpaiguri occupies the last place.

For the first time in 1893 suits on mortgages were, under the High Court's circular No. 17, dated 6th September 1892, classed as title and other suits instead of suits for money; hence the figures representing cases on money and title disposed of during 1893 bear no fair comparison with the corresponding figures of 1892. Rent suits in the two non-regulation districts are tried by Deputy Collectors, and are shown in a separate Appendix (VIII) which will be reviewed later on. In the five regulation districts rent suits decreased in Dinajpur, and increased more or less in the remaining four districts.

Turning to columns 4 and 5 it is observed that the number of Small Cause Court cases decreased in Rajshahi and Rangpur, and that of ordinary cases decreased in Jalpaiguri and Darjeeling. With these exceptions, cases increased in every district, resulting in a net decrease of 64 cases in Rajshahi and increase in the other districts, giving a net increase of 2,254 cases in the Division. The increase in Pabna was the largest, Bogra taking the second place.

The increase in the number of suits in Dinajpur is chiefly owing to the increase in the number of suits instituted at Raiganj. The District Judge, Mr. Cameron, considers this to be "mainly due to the growing commercial importance of Raiganj and other villages in the vicinity, and to the high prices of paddy and other produce prevailing since the last scarcity."

The increase in Jalpaiguri was almost entirely in Small Cause Court suits.

There was a large increase in rent suits in Rangpur. Part of this increase is put down to the bad feelings existing between two landlords and their tenants, and to disputes between the sharers in a zamindari and the Maharani Swarnamai.

Regarding the increase in Bogra and Pabna, Mr. Bradbury remarks thus:—

"Litigation continues to increase in the districts of Pabna and Bogra. The increment of 1892 has not been matched. That was hardly to be anticipated, but the excess over 1892 attained the respectable figure of 1,097, and is attributable to the growing indebtedness of the mass of the population. 1893 proved a bad year for all classes. For years the crops have been at best indifferent, but the beginning of 1893 excited hopes of a revival of prosperity The winter and spring crops were good in both districts and prices fair, but there the good fortune ended.

"Taking the Judgeship as a whole, there was no decline in any class of litigation. Suits for money and moveables, despite the transfer of the 524 mortgage suits to another head, rose from 11,355 to 11,490, and rent suits from 3,728 to 4,114."

The Munsif of Jalpaiguri remarks as follows regarding the nature of suits between landlords and tenants and the propriety of introducing the Bengal Tenancy Act into the district of Jalpaiguri:—

"The suits between landlord and tenant instituted in this Court are title suits which generally fall under the one or other of the following three heads:—

(1) Suits for ejectment.
(2) Suits by tenant against landlord to contest the order of the Revenue Court for ejectment on establishment of the tenant's right of occupancy.
(3) Suits by tenants to set aside the sale of their jot in execution of rent decree of the Revenue Court on the ground of fraud.

"Frequent disputes arise in this district between the jotdar landlord and his tenant in consequence of the unsettled state of the rent law as to which of them would be the occupancy *raiyat*, and the *raiyats* or the actual cultivators mostly suffer in such disputes. The last paragraph of my letter No. 4, dated the 10th instant, alluded to suits which fall under the classes Nos. 1 and 2 noticed above wherein the right of occupancy is in dispute. During the short period of two months from the date of my joining my post at this place on 11th November last and the date of my submitting the annual

statements, no less than 14 suits for ejectment came up before me for trial. On examining the register of suits I found that altogether 22 suits of this nature were instituted during the past year. The plaintiffs in such suits are jotdars, and the defendants are cultivators holding land under them. The peculiarity of these suits is that the jotdar landlord and his undertenant, who is the actual cultivator, both claim the right of occupancy, and the point at issue in such cases is which party has the right of occupancy. Such disputes are apparently due to the unsettled state of rent law, for Act X of 1859 is in force in this particular portion of this district on the south (west ?) of Tista which was formerly included within the district of Rangpur, and it is a recognised fact that Act X of 1859 placed the right of occupancy on a precarious footing. To remedy that defect the Bengal Tenancy Act, in consideration of the practical difficulty on the part of *raiyats* to prove their occupancy right, created a presumption in favour of the raiyat, and threw the onus on the landlord of disproving the raiyat's claim to the right of occupancy. Again, there is nothing in Act X of 1859 to prevent the jotdar from calling himself a tenure-holder or an occupancy raiyat just as it suits his purpose. He will set up all the rights of a permanent tenure-holder when there is dispute between him and the superior landlord who is the proprietor of the estate; but when the jotdar seeks to eject his under-tenant, the rights of the latter are ignored, for the jotdar himself claims the right of occupancy. The Bengal Tenancy Act has made an improvement of the law on this point by enacting that a tenant holding over 100 bighas of land is to be considered as a tenure-holder. Thus the right of occupancy in such cases is given to his under-tenants."

The result of appeals is shown in Appendix IX. The average ratio per cent. of number of appeals confirmed to total disposed of was 59·8 against 56·9. It was 65·2 in Pabna and 48·1 in Jalpaiguri.

The rent cases disposed of by Deputy Commissioners and Deputy Collectors in the two non-regulation districts are shown in Appendix VIII. Three and-a-half officers (to adopt the usual mode of reckoning) in Jalpaiguri disposed of 2,965 cases and examined 4,825 witnesses. The ratio per cent. of witnesses detained more than two days to total examined was only 6. Babu Harendra Kumar Ghose disposed of the largest number of cases and examined the largest number of witnesses. Babu Shyama Pada Chaudhri disposed of 758 cases and examined 1,322 witnesses, none of whom were detained over two days. The number of cases disposed of per officer was 847·1.

In Darjeeling one and-a-half officers disposed of 22 cases and examined 69 witnesses, of whom 36·2 per cent. were detained more than two days. One officer examined only five witnesses, all of whom were detained over two days. When inspecting the Darjeeling office, I expressed dissatisfaction with the delay which had occurred during a part of the year in dealing with all civil court business. This is attributed to paucity of officers, but the explanation does not appear to me sufficient. With reference to its smaller population and the simpler character of the business done, Darjeeling seems to me to have been better supplied with officers than any other district of this Division.

The civil work disposed of by the Deputy Commissioner and Deputy Collectors of Jalpaiguri under the Bhutan Duars Act XVI of 1869 is shown in Appendix VIIIA. Three and three-fourth officers disposed of 228 cases and examined 354 witnesses, 4·5 per cent. of whom were detained over two days.

Under the power vested in the Deputy Commissioner by Government orders Nos. 3639J. and 887J.D., dated 22nd August and 17th October 1892, respectively, the Deputy Commissioner has empowered the Deputy Collectors to receive and take up without reference all cases under Acts X of 1859 and XVI of 1869 arising within the territorial limits of the thanas assigned to each of them. Babu Fatik Chandra Das, Sub-Deputy Collector in charge of the Alipur tahsil, has also been empowered to try rent suits in the Alipur subdivision as may be made over to him by the Subdivisional Officer of Alipur for trial under Government notification dated 12th June 1893.

Appendices IXA and IXB show appeals under Acts X of 1859 and XVI of 1869. The ratio per cent. of number of appeals confirmed to total disposed of was 67·7 and 58·5 respectively.

XIII.—CRIME.

36. The following statement shows the crime, cognizable and non-cognizable, reported in each district during the year 1893, as compared with the year 1892

Districts.	Cognizable crime.		Increase.	Decrease.	Non-cognizable crime.		Increase.	Decrease.	Total crime.	
	1892.	1893.			1892.	1893.			1892.	1893.
1	2	3	4	5	6	7	8	9	10	11
Rajshahi	2,137	2,485	348	...	1,507	1,799	292	...	3,644	4,284
Dinajpur	2,786	2,412	...	374	1,637	1,745	108	...	4,423	4,157
Jalpaiguri	1,425	1,451	26	...	775	933	158	...	2,200	2,384

Bogra	1,464	558	1,368	597	2,832	288	
Pabna	1,993	682	1,988	695	3,983	342	
Divisional Total ...	14,045	570	11,882	874	25,927	309	

The district of Darjeeling shows the largest proportion of crime to population. The offences are, however, of a petty character, and their unusual

number is due to the conditions of life at a hill station which are very different from those which prevail in Bengal generally.

In the year 1892 there was an increase in cognizable and a decrease in non-cognizable crime. This was attributed by me to the high prices and agricultural depression. In the year 1893 the variations have been in the opposite direction owing to better harvests. Other causes were at work, but they were not of general operations and seem to have counteracted each other. The increase in Bogra is attributable to the change made in the arrangements for receiving complaints made to the police. Five new reporting centres were opened during the year, thus affording increased facilities for complaint.

There was a slight decrease in the number of cognizable offences against public tranquillity, class I. This Division has not been troubled appreciably by the kine-killing disturbances so prevalent in other parts of the province. A more satisfactory improvement is indicated under class II in regard to serious crime against the person. I am unable to assign any special cause for this.

There was a marked decrease under classes III and V, offences against property, the figures under these heads being 9,441 against 10,515. I attribute it mainly to the cessation of the distress which aggravated crime of this kind in 1892. It is mainly noticeable in the districts which then suffered, particularly in Dinajpur and Rangpur.

The only other marked variation is in class VI, and is due to greater activity in prosecuting for nuisances and other offences of a minor character.

The total number of non-cognizable offences reported during 1893 was 11,882 against 10,304 in 1892, showing an increase of 1,578 cases. This increase occurred chiefly under classes IV and VI. I have always found that such changes are most numerous in years of plenty. It is only then that the poorer classes have the means of seeking legal redress for minor injuries.

XIV.—POLICE.

39. I do not wish to offer any comment on the figures given in Appendix X to show the working of the police; they present no unusual features, and their general purport is dealt with in my remarks on the criminal returns.

The following statement shows the number of serious charges instituted against police officers during 1893:—

Districts.	Torture cases.		Extortion cases.		Embezzlement cases.		Total.		Remarks.
	1892.	1893.	1892.	1893.	1892.	1893.	1892.	1893.	
1	2	3	4	5	6	7	8	9	10
Rajshahi	3	2	...	2	...	...	3	4	
Dinajpur	7	2	35	20	...	...	42	22	
Jalpaiguri	2	...	...	...	1	...	3	...	
Darjeeling	...	...	...	...	...	...	...	...	
Rangpur	...	...	1	...	...	...	1	...	
Bogra	...	1*	9	7	...	...	9	8	* Pending.
Pabna	...	...	3	...	...	...	3	...	
Total ...	12	5	48	29	1	...	61	34	

The charges of torture as to which enquiry has been completed proved to be false. In Dinajpur the complainants were prosecuted, and in one instance convicted.

Of the Rajshahi extortion cases, one was declared false. In the other it was shown that a constable of Naugaon police-station, while on beat duty in a village, wrongfully confined a man and extorted Rs. 5 in collusion with the pound-keeper of the village, on the plea that the accused illegally released cattle which he had been taking to the pound. The constable was convicted and sentenced to three months' imprisonment. I noticed last year that the growing custom of deputing constables to isolated places in order to prevent crime led to great abuse.

In Dinajpur there were 20 cases of extortion, against 35 in the preceding year. Eight cases were declared false, nine true, and three were pending at the close

of the year. The district of Dinajpur requires the closest watching in this respect. Nowhere else are there so many true charges against the police to be prosecuted or so many false charges to be exposed.

In regard to Bogra I had to complain, when I made my inspection, that the extortion cases were not specially reported, and that the principle requiring the District Superintendent of Police to enquire at once as to serious charges against the police was not observed. Neglect of rule in this respect had much to do with leading to the frequent charges which characterise the returns as to the Dinajpur police. In the latter district there has been a reform in procedure, followed by a substantial decrease in the number of charges.

The Magistrate of Dinajpur observes that the whole tone of the force has improved in his district. The Magistrate of Rangpur and the Deputy Commissioner of Jalpaiguri also express themselves satisfied. I agree in thinking that these districts, and also Darjeeling, have done comparatively well. With the work in Pabna and Rajshahi I am less satisfied, while Bogra has, in my opinion, done badly during the year. I cannot, however, fail to realise that the general standard of police efficiency in the country is low, and to feel concerned at the slow rate of improvement. In all other departments of Government the work done is at least honest, the suspicion of deliberate unfairness being quite exceptional. In dealing with the police, on the other hand, the Courts have to be constantly on their guard against actual corruption. And looking back over the long series of years during which I have been connected with this Division, I recognise in other branches of the administration a progress which in the case of the Police is not discernible. The officers are drawn from the section of society which furnishes Government with faithful servants in every other department, and I see no prospect of improvement in moral tone from any change which may be made in that direction. Bad traditions, not only in the force, but prevalent also among the public as regards, what is to be expected from the force, account for much of what is objectionable, exceptional temptation for more, and these are conditions not easily altered. But I think that much good may be done by making the treatment of police officers in regard to punishments and promotion accord with that prevalent in other departments. It is a pain to me to inspect the two conduct registers—one for the office, one kept in a manner more confidential—which are maintained at every district head-quarters. The record of punishments inflicted from year to year on an officer who has risen by slow steps to the top of his service and occupies a position of great trust, often reads like the life history of some notorious criminal. The promotions also have not the regularity which elsewhere gives an assured prospect to public servants. Chance and favour seem to count for too much, steady good service for too little in the service. I am aware that the severe punishments and irregular promotions to which I object are most frequently due to the zeal of District Superintendents to produce good results; but I think that in this respect there is too much zeal and too little justice. In my opinion District Magistrates should see to this by taking a much more active part in the internal administration of the police, at least until they are satisfied that promotions, transfers, and above all punishments are made on a system of which they approve. At present they do little more than hear appeals—a procedure which can only check gross irregularities.

The Village Chaukidari Act.

40. In Jalpaiguri the Act was introduced in 19 villages within the Nagrakata outpost. In April 1893 a deputation of the tea planters waited upon His Honour the Lieutenant-Governor at Jalpaiguri, and it was arranged that managers of tea gardens should appoint their own chaukidars and furnish statistics of deaths, &c. The arrangement has been brought into force since August last, and death returns are submitted by the planters regularly.

Panchayats and chaukidars were appointed for the working of the Act in the Darjeeling Terai. The Deputy Commissioner reports that an opinion on the success of the system would be premature. A special force of "Village Police" remunerated by the grant of land is still maintained in the Terai, but it is proposed to utilise them more directly as patrols on main roads, and to bring them into more close connection with the regular police.

I paid considerable attention during my tour to the working of the system in the regulation districts. In my opinion the existing tendency to centralise the chaukidari force has not been judiciously guided. In pursuit of this ideal the advantage of village control through headmen selected for the purpose has been very generally overlooked. In Bogra the term of office prescribed by law for panchayats expired some years ago, and no new appointments have since been made. In Rajshahi the system of beats composed of many chaukidars acting under police supervision has been established so extensively as to supersede to a great extent the village watch, directed by the panchayat, which is the only arrangement recognised by the Act. Many District Superintendents of Police constituted district funds, supplied by deductions from the chaukidars' pay on the contributions of panchayats, from which uniforms were purchased and some other expenses defrayed. The statutory right of panchayats to nominate chaukidars is not always respected, the police interfering too much in the selection. These defects are of some standing, and have in part been removed during the year on my suggestion; but the desire to ignore the panchayats and work solely through the chaukidars, who can be brought by weekly parades under the immediate orders of the local policeman, remains as strong as ever. My own experience is that panchayats selected with care can be so managed as to constitute a very efficient agency.

XV.—CRIMINAL JUSTICE.

41. The following statement shows the criminal work disposed of by the Stipendiary and Honorary Magistrates in the several districts of the Division during 1893:—

Districts.	Number of Stipendiary Magistrates.	Number of cases disposed of.	Number pending at close of year.	Number of persons disposed of.	Number convicted.	Number acquitted.	Number remaining under trial at close of year.	Number of witnesses examined.	Number of those in column 13 who were detained more than two days.	Ratio per cent. of witnesses detained over two days to total number examined.	Number of appeals decided by Magistrate or District Judge.	Number of decisions confirmed in appeal.	Ratio per cent. of decisions confirmed in appeal to total appealed.	Average number of cases disposed of per officer.	Average number of witnesses examined per case disposed of.	Remarks.

It will be observed that each Stipendiary Magistrate heard on the average three witnesses each working day, and disposed of the business of one person. The criminal work does not appear to be heavy judged by the test of figures, and I am much surprised by the allegations made as to the impossibility of dealing with it without resorting either to frequent postponements or protracting the sitting of the courts until long after darkness has set in. I went closely into the business of one Deputy Magistrate, a Subdivisional Officer, whose diary showed that he remained in office until hours to which his Sessions Judge

objected as unduly late. I found that he had very little to do in any department, and that he was unable to explain how the greater part of his time was employed. In some instances Deputy Magistrates seem to find their offices by no means the least pleasant place in which to sit out the afternoon, and there is a general feeling that a diary showing long hours of attendance is a certificate of diligence which may be useful at need.

The average number of cases disposed of per officer was largest in Pabna and smallest in Jalpaiguri, where Act X cases are tried by Deputy Collectors, the figures being 263·3 and 134·1 respectively. The ratio per cent. of witnesses detained over two days to the total number examined was 5·3 against 3·07 last year. The general result is unfavourably affected by the districts of Bogra and Darjeeling. In the former I found on inspection that the District Magistrate was inefficient, owing to the state of his health, and he had to take sick leave; while at Darjeeling I had to find serious fault with the arrangements for hearing cases.

The average number of witnesses examined per case disposed of was 3·9. The largest number was in Bogra and the smallest in Darjeeling, the figures being 5·9 and 2·6 respectively. In Bogra I think that the courts were somewhat lax in exercising control over the summoning of witnesses whose evidence is not material.

The ratio per cent. of decisions confirmed in appeal to total appealed was 74·2 against 73·7 in the preceding year. The best results were obtained in Pabna, 84·1 per cent., the worst in Rajshahi and Bogra.

The 36¾ Benches and Honorary Magistrates sitting singly disposed of 2,763 cases and 3,410 persons against 3,333 cases and 3,942 persons, and examined 7,302 witnesses against 7,747. The average number of cases disposed of per Bench and Honorary Magistrates sitting singly was 75·1 against 100·2. It was highest in Bogra and lowest in Dinajpur, the figures being 149·5 and 24·5 respectively.

The percentage of persons convicted to persons disposed of was 58·6 against 64·3.

The ratio per cent. of witnesses detained over two days to total number examined was 9·09 against 4·0 in the preceding year. The ratio was highest in Rangpur and Pabna and nil in Jalpaiguri.

The average number of witnesses examined per case disposed of was 2·6 against 2·3; the largest number was in Rangpur and smallest in Darjeeling, the figures being 4·6 and 1·4 respectively.

The ratio per cent. of decisions confirmed on appeal to total appealed was 65·04 against 72·4 in the preceding year. The best results were obtained in Rangpur and the worst in Rajshahi and Pabna, the figures being 71·6 and 50 respectively. I may observe that at Serajganj the Subdivisional Officer disposed of more cases than any other Magistrate, and that the results from that subdivision proved the best on appeal.

In the district of Dinajpur the experiment was tried of creating a territorial jurisdiction for a Deputy Magistrate at head-quarters without actually opening a subdivision. Certain thanas are committed to his charge, he hears the cases that come from these, and camps through them in the cold weather. I think that the arrangement is a good one. It was my practice as District Magistrate to distribute cases in this way on the territorial system, and I have always found it produced better results than the daily division of complaints among the courts at the discretion of the senior officer. The latter is a procedure generally liked by the gentleman who distributes the cases, who is not necessarily the District Magistrate. I never knew it to command the approval of any one else—certainly not that of the junior Magistrates, the Pleaders, or the public. The tour of the Dinajpur Magistrate through his territorial jurisdiction was of much use, but such a proceeding is seldom practicable, owing to the paucity of officers.

A similar territorial subdivision was opened in the district of Jalpaiguri in that part of the district which is the chief seat of planting operations. Mr. Newbould was appointed to the office, which he held during the cold season. The result of his work has been specially reported to Government. It was contemplated to station a European officer of the standing of a Joint-Magistrate at Jalpaiguri permanently to deal with the portion of the district occupied by

tea planters, but the arrangement was interrupted in April, because a suitable officer was not available to replace Mr. Newbould. I hope that the plan may be resumed next cold season, or if possible at an earlier date.

The Honorary Magistrates disposed of 20·3 per cent. of the number of cases in the Division against 36·5 per cent. in the preceding year. These cases were generally of simple character, and probably do not represent more than five per cent. of the work. Messrs. Warnicke, Sutherland, and Captain Power, however, heard several important cases at Darjeeling. As in 1892, the Honorary Magistrates of Darjeeling and Rangpur disposed of the largest number of cases, the figures being 980 and 722 respectively. The Honorary Magistrates of Dinajpur heard 49 cases only.

From Appendix XII, which shows details of criminal work disposed of by Honorary Magistrates, it appears that Babu Gopal Chandra Chatterji, an Honorary Magistrate of Nilphamari, who sits singly, and the Nilphamari Bench detained 50 and 39 per cent. and the Serajganj Independent Bench detained 18·7 per cent. of witnesses examined by them over two days.

Raja Janaki Ballab Sen, an Honorary Magistrate of Rangpur, who sits singly, disposed of 30 cases altogether, in which he examined 11·5 witnesses per case, while Captain Power and the Bench exercising third class powers, Darjeeling, disposed of 210 and 216 cases respectively and examined 1·2 witnesses per case only.

The results of appeals were best in the case of the third class Bench of Darjeeling, Babu Annada Prosad Sen, an Honorary Magistrate of Rangpur, who sits singly, and the Serajganj Independent Bench, and the worst result in the case of Chandanbari Bench.

The total number of persons dealt with by the Benches of Dinajpur was 65, of whom 54 were acquitted and 11 convicted.

Remands.

42. The remands in A form cases in the several districts are shown in the following statement:—

	Total Stipendiary	3,501	1,327	836	592	278	175	85	46	73	89	3·4
	Total Honorary	231	91	52	50	12	9	6	4	2	5	2·6
	Divisional Total for 1893	3,732	1,418	888	642	290	184	91	50	75	94	3·4
	Divisional Total for 1892	3,653	1,422	884	567	332	179	97	34	35	103	1·9

The proportion of these cases adjourned more than six times is large, 3·4 per cent. of the whole, against 1·9 per cent. last year, and 6·5 per cent. in 1891. There was at one time a tendency to refuse adjournments necessary for proving previous convictions through dread of an entry in column 11 of this return. In so far as the increase in the number of adjournments is due to the disappearance of this apprehension, it is to be welcomed. I have no fault to find with the other five districts of the division in regard to the adjournment of police cases, but in Bogra certainly, and in Darjeeling probably, the delay was the result of inefficiency. More than half the cases adjourned more than six times occurred in Bogra, a small district where the work could have been easily kept in hand.

Cases of European British subjects.

43. In Jalpaiguri there were five cases during the year in which European British subjects were involved. Three of these were charges of criminal force and assault and two of wrongful restraint. Two persons were convicted—one of wrongful restraint, the other of assault.

The following table shows the details of the trial of European British subjects during the year in Darjeeling:—

Description of offence.	Total number brought to trial. Cases.	Persons.	Total disposed of. Cases.	Persons.	Pending. Cases.	Persons.	Persons how disposed of. Convicted.	Acquitted or discharged.	Committed.	Died, escaped or transferred.	Total.
1	2	3	4	5	6	7	8	9	10	11	12
(1) Contempt of the lawful authority of public servants (Chapter X).	2	2	2	2	...	...	1	1	...	...	2

Total for 1892 ...	18	19	18	19	...	...	8	11	...	...	19

Bad livelihood cases.

44. The subjoined table shows the bad livelihood cases during the year 1893:—

Districts.	Number of cases instituted.	Number of cases in which conviction followed.	Number of cases in which acquittal followed.	Longest period from date on which process issued to conclusion of case.	Remarks.
1	2	3	4	5	6
Rajshahi ...	20	18	2	55	
Dinajpur ...	23	22	1	29	
Jalpaiguri ...	13	4	2	195	
Darjeeling ...	21*	14	4	200	* 3 transferred to Jalpaiguri.
Rangpur ...	34	22	12	50	
Bogra ...	37	29	7	280	
Pabna ...	112	82	30	211	
Total for 1893 ...	260	191	68	...	
Total for 1892 ...	253	169	90	...	

From the proportion of acquittals it would appear that demands for security were made somewhat rashly in Rangpur. In Pabna this provision of the law was resorted to freely.

Result of Sessions trials.

45. The following statement shows the results of the Sessions trials in the several districts:—

Districts.	Number of cases committed, but pending at commencement of year.	Number committed during the year.	Total number for disposal.	Number disposed of.	Number in which conviction obtained.	Number of cases in which sentence was modified or reversed by High Court.	Number of cases acquitted by Sessions Judge.	Number of cases otherwise disposed of.	Percentage of cases resulting in conviction to total cases disposed of.	Remarks.
1	2	3	4	5	6	7	8	9	10	11
Rajshahi ...	5	31	36	23	16	1	7	...	69·5	
Dinajpur ...	7	13	20	19	14	...	5	...	73·6	
Jalpaiguri ...	...	10	10	10	9	...	1	...	90·	
Darjeeling ...	2	14	16	15	11	3	4	...	73·3	
Rangpur ...	1	50	51	41	29	3	12	...	70·7	
Bogra ...	...	24	24	24	18	...	6	...	75·	
Pabna ...	4	23	27	23	18	...	5	...	78·2	
Total for the Division for 1893 ...	19	165	184	155	115	7	40	...	74·1	
Total for the Division for 1892 ...	36	189	225	205	129	29	74	2	62·9	

The result is satisfactory, as it does not indicate that commitments were made rashly in any district.

Criminal fines.

46. Appendix XV shows the condition of the Fine Register in the several districts during 1893. The year commenced with a balance of Rs. 33,274; the amount imposed during the year was Rs. 78,672, making a total of Rs. 1,11,946, of which Rs. 67,622 were collected and Rs. 9,934 remitted, leaving a balance of Rs. 34,390 at the close of the year. The District Officer of Darjeeling observes that "sufficient thought has not been given by courts to the capacity of the accused to pay. I have had occasion to notice several cases in which owing to this neglect the result of the order of the courts has been to swell the arrear list without any advantage." Mr. Harris writes:—"I have frequently had to point out to Subordinate Magistrates the necessity of exercising discretion in the imposition of fines. There is a tendency to impose fines far in excess of what an offender can pay, especially in opium and excise cases." In these remarks

I concur. It is by no means satisfactory to find that of the fines imposed about one-eighth have to be written off as irrecoverable. The tendency to press for heavy fines in excise cases is connected with the fact that officials receive a portion of the proceeds, and I found on inspection that it led to abuses in the subdivision of Kurseong.

47. The following abstract statement shows the attendance of the Honorary Magistrates. The details are given in Appendix XVI:—

Attendance of Honorary Magistrates.

Districts.	Subdivision.	Number of times the Honorary Magistrates were asked to attend.	Number of times the Honorary Magistrates actually attended.	Number of times the Honorary Magistrates were absent—			Remarks.
				With leave.	Without leave.	Total.	
1	2	3	4	5	6	7	8
Rajshahi ...	Sadar subdivision ...	163	105	15	43	58	
	Nator ...	329	172	1	156	157

Pabna ...	Sadar subdivision ...	350	312	11	27	38	
	Serajganj ...	519	245	16	258	274	
	Total ...	869	557	27	285	312	
	Divisional Total, 1893	4,350	3,603	324	924	1,248	
	Ditto, 1892	4,147	3,650	434	843	1,277	

The result indicated does not greatly differ from that attained last year. At Kurigram only was the attendance bad. It is stated that there is a difficulty in finding persons suitable for strengthening that Bench.

XVI.—REGISTRATION OF DEEDS.

48. The number of deeds registered during the year, as shown in Appendix XVII, was 98,742, against 87,034 in the previous year, showing an increase of 11,708. The increase is due to several causes, the general development of business, the growing popularity of the department, and the opening of new registration offices.

All the sub-registry offices in this Division are reported to have worked well, except one, as to the efficiency of which enquiries are now pending.

XVII.—CONDITION OF THE DIVISION AS REGARDS THE LAND AND THE LAND REVENUE ADMINISTRATION.

49. Appendix XVIII shows district by district the demand, collections and balances of the land revenue and cesses. The regular annual income on account of land revenue (current demand) is Rs. 51,58,665, and there was at the commencement of the year an arrear of Rs. 1,10,340; the collections amounted to Rs. 51,78,388, and the arrears were reduced to Rs. 87,168. The year was therefore, in regard to income, better than the average of years can possibly be; it was one of progress, in which arrears were not added to, but diminished. The balances on temporarily-settled estates were reduced from Rs. 3,954 to Rs. 1,106; on estates directly held by Government from Rs. 84,864 to Rs. 55,598. On the other hand there was a falling off in the collections in regard to permanently-settled estates: this is a matter of less ultimate importance, as revenue of that class is always realised in the end, and generally with very brief delay. Looking at the different districts, I find that ground was lost in Darjeeling and Bogra, and gained in each of the other five. It will be shown afterwards that the loss is connected with a peculiarity in our account system. The percentage of collections was 100·3 per cent. on current demand and 98·2 per cent. on total demand. I do not, however, accept the demand figures as quite fair to the Collectors, for they include sums not really due. Thus the rent of certain land in the Terai appears as a demand and again as a remission, the fact being that the fields to which it relates have been granted for the support of a local police force. Allowances made to the heirs of the late Chebu Lama have been similarly treated and other items of this kind. In my opinion nothing should be shown against the Collector as a demand unless it was due, so that he could collect it; it is only when accounts are made on this principle that we can state without qualification that the collections amounted to such a percentage of the demand. The road cess collections were deficient, and the outstanding balances increased in Jalpaiguri, Rangpur, Bogra, and Pabna.

The difference between the amounts shown in Appendix XVIII of the report for 1892-93 as balance of land revenue and the amounts now shown as the arrear demand is due to readjustment of accounts, settlements with retrospective effect, and the like.

The increase in the current demand is chiefly on account of the resettlement of the Western Duars.

50. The following table shows the percentage of current collection on current demand and the percentage of arrear collection on arrear demand under each class in each district:—

Collections.

Districts.	Class I—Permanently-settled estates.		Class II—Temporarily-settled estates.						Class III—Estates directly managed.				Remarks.
			(a) Settled for periods with proprietors.		(b) Private estates leased to farmers for periods.		(c) Government estates leased to farmers for periods.		(a) Those managed for proprietors.		(b) Those owned by Government as proprietor.		
	Current.	Arrear.	Current.	Arrear.	Current.	Arrear.	Current.	Arrear.	Current.	Arrear.	Current.	Arrear.	
1	2	3	4	5	6	7	8	9	10	11	12	13	14
Rajshahi ...	99·64	100	100	100	100	...	100	...	65·37	92·30	83·69	78·38	
Dinajpur ...	99·7	100	...	...	...	...	...	...	66·6	...	99·4	100	
Jalpaiguri ...	100	100	100	100	...	...	...	...	...	...	99·08	88·39	
Darjeeling ...	52·30	...	...	...	...	...	100	100	...	...	99·09	95·30	
Rangpur ...	99·12	100	100	100	21·99	100	77·46	...	...	...	61·90	...	
Bogra ...	96·9	100	...	...	...	...	...	...	...	...	87·12	98·70	
Pabna ...	99·8	100	99·1	100	96·4	89·7	90·5	100	68·9	95	62·1	93·1	

On permanently-settled estates the percentage of collection was above the prescribed standard in all districts except Darjeeling and Bogra. The low percentage in the first of these districts is owing to the system which I have referred to of entering as demand that which is not to be demanded. Half of the assessment on the late Chebu Lama's estate, which used hitherto to be deducted from the total demand, has been, under orders of the Board, shown as a remission during the year under report. In Bogra Rs. 12,609 out of a total arrear of Rs. 13,443 were collected in other districts during the year, but not credited in the Bogra treasury accounts until after its close. From a Provincial point of view this is not an arrear at all. Government received the money within the year, and whether at one treasury or at another is not a matter affecting the general revenue.

The short collections in Rangpur on private estates temporarily settled with farmers are due to the default of a man said to hold at a very high rent. Certificates have been filed for the realisation of the balances. I do not regard the explanation as satisfactory. Collectors are not bound to let out Government estates in farm, but if they do adopt this form of collection they are responsible for seeing that the settlement is on fair terms, and that the farmer is a person who can be trusted to pay to the day, or for exacting such conditions as to prepayment or security as will prevent default. The short collections of arrears in Pabna were chiefly on account of diluvion.

In estates directly managed for the proprietors the collections were indifferent in Rajshahi, Dinajpur, and Pabna. In Rajshahi this is attributed to bad harvests. In Dinajpur the annual demand on account of this class of estates is Rs. 12 only, of which Rs. 4, the demand for the March kist, was received just after the close of the year by rent money-order.

In Pabna the raiyats of estate Namzad Bahirchar having been dissatisfied with the assessment under the Bengal Tenancy Act combined not to pay rent and asked for reduction. I may observe that the assessments under the Act which I saw were, in my opinion, defective, so that the raiyats probably had some cause. I have referred to the Board the question whether settlements of this class should be brought into operation until they have been duly approved by the sanctioning authority. Reduction of rent on account of lands under water, or covered with sand, was directed towards the close of the year. The amount that will have to be remitted on this account is about Rs. 1,000. In the Mirkutia Digar estates, with an annual demand of about Rs. 8,000, there being a partial failure of crops, the raiyats could not pay.

The collections on Government estates managed direct were satisfactory in Dinajpur and also in Darjeeling. In Rajshahi the short collections are attributed to bad harvests and poverty of the raiyats. In Jalpaiguri the percentage of current collections on current demand has reached the prescribed standard. The low percentage on the arrear collection is attributed to the facts that Rs. 6,082 due from the heirs of the late Colonel Hedayet Ali are payable by instalments under the orders of Government, and that Rs. 388 were not collected pending enquiry into objections raised, apparently with justice, on the ground of diluvion. In Darjeeling a small portion of the arrear demand remained outstanding from the cardamom fields settled during the year under report with retrospective effect from 1st April 1892. The amount has since been collected. In Rangpur the low percentage is on account of an estate purchased on behalf of Government at a revenue sale. The greater portion of the estate had been washed away and the remainder is sandy and unfit for cultivation. Nothing could therefore be realised during the year, but I am inclined to think that the demands might have been readjusted to the altered conditions to prevent the occurrence of nominal arrears. The low percentage in Bogra is attributed to the fact that Rs. 3,066 collected during the year by the Manager could not be credited in the treasury before 31st March. In Pabna the short collections were chiefly on account of diluvion.

There has been a further increase in the current demand of the cesses due chiefly to revaluations. The difference between the balance shown in Appendix XVIII of the previous report and the arrear demand now shown in the Appendix is chiefly due to valuation of rent-free tenures, to transfer of estates from one district to another and to readjustment of accounts. There has been a slight falling off in the collections as compared with the previous year.

The result of collection of the zamindari dák cess was poor in Jalpaiguri and Pabna. In the former district the arrears are chiefly due from the tea planters. The Deputy Commissioner reports that he is seeing to the matter. Steps are being taken for the realisation of the balances, and in no case is the balance irrecoverable. The department appears to have worked smoothly and satisfactorily during the year.

Operation of the sale laws.

51. The following table shows the number of sales and exemptions from sales in the several districts dur ng the year:—

Districts.	Sales.				Exemption from sales.	Sales annulled.	Remarks.
	Whole estate.	Shares.	Rights and interests.	Total.			
1	2	3	4	5	6	7	8
Rajshahi ...	3	1	...	4	59	...	
Dinajpur ...	2	...	...	2	24	...	
Jalpaiguri ...	1	...	...	1	8	...	
Darjeeling ...	...	...	...	...	63	...	
Rangpur ...	3	...	...	3	16	...	
Bogra ...	...	...	...	...	51	...	
Pabna ...	12	10	...	22	157	2	
Total, 1893-94 ...	21	11	...	32	378	2	
Total, 1892-93 ...	7	15	...	22	474	...	

The causes which led to the sale were of the usual character—the unprofitableness of the estates themselves, disputes among shareholders, and diluvion. The Act appears to have been administered with moderation.

Appendix XIX shows the dates on which the periodical sales were conducted in the several districts of the Division during the year. It seems to call for no comment.

Settlements.

52. Particulars of settlements of temporarily-settled estates, whether belonging to Government or to proprietors, will be found in Appendix XX, which excludes the settlements that were under the supervision of the Director of the Department of Land Records and Agriculture.

The settlement of the Western Duars, Jalpaiguri, was carried on during the year under the Bhutan Duars Act XVI of 1869. The settlements of the Mainaguri and Bhalka Tahsils were confirmed by me in notifications published in the *Calcutta Gazette* of 13th December 1893 and 21st March 1894, respectively. The confirmations of the settlements of the Falakata and Alipur Tahsils are pending the disposal of certain appeals in connection with the jots in those tahsils. The records of jots in pargana Ambari Falakata were published on 27th February 1894. The settlement brings in an increased revenue of Rs. 1,36,317, or Rs. 58·20 per cent. over the revenue of Rs. 2,33,999 paid under the previous settlement. The Jalpaiguri collections during the year were so far satisfactory that the realisations exceeded the annual demand; the settlement slightly retarded payments, many pattas being granted late in the year, but in no instance ultimately prevented the satisfaction of the public dues. The increase in the revenue gained without friction or objection is satisfactory. It has resulted from a valuation made on the basis of the rent actually charged by the jotdars when they underlet the lands, and therefore can hardly be considered by them to be excessive.

The resettlement of the West Tista Khas Mahals in Darjeeling was sanctioned by Government towards the close of the year. It now remains to distribute the pattas, &c.

In Bogra the traverse survey of 173 villages appertaining to the Jaipur Government estates (60 square miles) was made and 22 villages (13·15 square

miles) were cadastrally surveyed. The cost of survey was Rs. 6,225 during the year. Towards the close of the year a Special Settlement Officer was sent by Government for the resettlement of these estates. The work of regular settlement was not commenced till after the close of the year, and when I inspected at the end of March but little progress had been made.

Estates held under direct management.

53. The following table will show the state of collections from these estates during the year:—

Districts.	Number of estates—			Total demand, arrear and current.	Total collections, arrear and current.	Total remissions, arrear and current.	Total balances.	Percentage on collections of demand.			Remarks.
	Belonging to Government.	Belonging to private individuals.	Total.					Arrear.	Current.	Total.	
1	2	3	4	5	6	7	8	9	10	11	12
				Rs.	Rs.	Rs.	Rs.				
Rajshahi	20	10	30	9,876	7,870	266	1,451	78·6	82·6	82·1	
Dinajpur	11	2	13	486	479	....	7	100	98·9	98·5	
Jalpaiguri	5	...	5	4,41,337	3,06,364	1,511	43,462	88·3	90·0	89·8	
Darjeeling	22	...	22	1,08,942	1,07,884	430	628	95·3	99·0	99·0	
Rangpur	3	...	3	42	26	...	16	...	...	61·9	
Bogra	8	...	8	47,523	41,998	37	5,488	95·7	87·1	88·3	
Pabna	28	21	49	18,177	12,889	742	4,546	94·7	66·9	70·9	
Total, 1893-94 ...	97	33	130	6,26,083	5,67,510	2,975	55,598	89·4	90·8	90·4	
Total, 1892-93 ...	90	27	117	6,23,789	5,33,462	7,465	82,853	72·0	94·6	85·5	

The collections were satisfactory in Dinajpur and Darjeeling. The reasons of the short collections in the other districts have already been explained.

Agency and mode of management.

54. There has been no change during the year in the agency and mode of management.

Costs of management.

55. The following table shows the cost of management in the several districts:—

Districts.	Revenue demand of estates for which the expenditure in column 3 was incurred.	Cost of management, including contingencies.	Percentage of column 3 on column 2.
1	2	3	4
	Rs.	Rs.	
Rajshahi	8,389	405	4·8
Dinajpur	...	...	...
Jalpaiguri	3,68,991	16,498	4·4
Darjeeling	1,07,109	9,570	8·9
Rangpur	...	...	...
Bogra	40,611	5,461	13·4
Pabna	15,602	1,555	9·9
Total for 1893-94 ...	5,40,702	33,489	6·1
Total for 1892-93 ...	5,64,530	32,181	5·7

The percentage cost of management was higher than in the previous year. This is chiefly owing to the fact that the demands on account of tea grants in Jalpaiguri, which are now treated as estates under orders of the Board, have not been shown in column 2 of of the above table.

Condition of raiyats, desertions, &c.

56. The Government estates of this Division, and indeed of Bengal generally, are scattered all over the country, in healthy places and malarious, secure and exposed, fertile and sterile; and the condition of the raiyats in each can be compared only with that of cultivators holding under similar conditions in the immediate neighbourhood. Indeed, there is some tendency towards the accumulation in the hands of Government of the worst lands in the country, those which were originally waste, being situated in places too feverish for occupation, or which private owners have had to throw up because, owing to deterioration in

value, they could not pay the revenue permanently assessed. By comparison with estates possessing the same natural advantages, those in the hands of Government are somewhat above the average in regard to the prosperity of tenants. This is a fact as to which I have satisfied myself by protracted observation, but I admit that it is not one that is very obvious, or which can be discerned without considering a large number of instances. In Jalpaiguri, where Government estates are most extensive, it might be disputed on the ground that the Government jotdars are in no way better off than those on the neighbouring properties—that of His Highness the Maharaja of Kuch Bihar and of the Raikat of Bykantpur, the explanation being that these two estates are well managed from a tenant's point of view. Where this is the case, the raiyats on a private land are as well off as those who hold from Government, though they possess less assurance of the continuance of the conditions on which their prosperity depends, that is to say, fixity of tenure at a moderate rent. Under the operation of the Bengal Tenancy Act, all tenants are now in great measures protected, and thus their condition approximates each year more closely to that of the raiyats holding from Government. Mr. Greer has pointed out that the protection of the law extends very imperfectly to the under-raiyats on the Government estate of the Darjeeling plains; they hold from the jotdars, and are in no way privileged. In their interests I have recommended the extension of the Bengal Tenancy Act to the Terai, but it is to be observed that the cultivators referred to are not the tenants of Government. The expenditure from the 10 per cent. Improvement Fund on such works as the construction of wells, small as it is, compares favourably with the outlay of private proprietors, and is of appreciable use. On the other hand, when a zamindar resides, he helps to relieve the somewhat sombre conditions of agricultural life in Bengal, affording a social centre, and bearing the expense of the festivals in which the people seek amusement as well as an outlet for their religious feelings. The tendency at present is towards residence in towns, particularly in Calcutta, and the advantage of private proprietorship in this respect is therefore on the wane.

During the year there were nine desertions and five relinquishments in the Government estates in Rajshahi. The former were mainly due to diluviation of holdings, and no special cause can be assigned for the latter, the number being small.

Miscellaneous and sanitary improvements.

57. The following statement shows the expenditure from the grant for the management of, and miscellaneous and sanitary works of improvement in, Government estates during the year:—

Division.	Districts.	Amount expended from—			Grant for agricultural public works.	Remarks.
		7½ per cent.		Two per cent. for sanitary improvement.		
		Management proper.	Miscellaneous improvements (including agricultural improvements and experiments).			
1	2	3	4	5	6	7
		Rs.	Rs.	Rs.	Rs.	
Rajshahi.	Rajshahi ...	405	340	...	1,000	
	Dinajpur ...	...	...	...	...	
	Jalpaiguri ...	16,498	9,221	7,012	...	
	Darjeeling ..	9,570	660	...	...	
	Rangpur ...	...	...	...	...	
	Bogra ...	5,461	325	799	...	
	Pabna ...	1,555	188	410	...	
	Total ...	33,489	10,734	8,221	1,000	

Details of the expenditure shown in columns 4, 5, and 6 of the foregoing statement are given in the following table:—

Districts.	Amount expended— In digging tanks and sinking wells.	In drainage and irrigation.	In planting trees.	On drains and embankments.	On roads.	On sundry works.	Total.
1	2	3	4	5	6	7	8
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Rajshahi ...	1,000	...	...	...	...	340	1,340
Dinajpur ...	...	...	...	...	...	...	...
Jalpaiguri ...	2,022	6,126	...	...	3,161	4,924	16,233
Darjeeling ...	...	...	...	...	...	660	660
Rangpur ...	...	...	...	...	...	...	...
Bogra ...	809	...	16	10	207	82	1,124
Pabna ...	410	...	...	...	...	188	598
Total ...	4,241	6,126	16	10	3,368	6,194	19,955

Besides the above, Rs. 12,112 were expended during the year out of the Darjeeling Improvement Fund on the construction of a hospital at Kalimpong, improvements of hâts and bazars, maintenance of dispensary at Siliguri and on primary education.

Roads and communications.

58. In Jalpaiguri Rs. 52,044 and Rs. 15,164, respectively, were expended on construction and maintenance of roads. The expenditure of Rs. 52,044 was met from various sources, while Rs. 15,164 were wholly met from the District Fund. There was an extraordinary heavy flood of the river Jaldhaka in July 1893, which swept away a portion of the road from Mainaguri to Nagrakata with its stone bund constructed in the previous year at a cost of Rs. 8,200. Prompt measures were taken to preserve the road from further encroachment and to restore communications. Rupees 26 only were spent on village roads, as little money was available. In Darjeeling the total expenditure for the repairs of roads in the Terai, paid from the District Road Cess Fund, amounted to Rs. 6,173. A bridge was constructed on the Rilli river in Kalimpong khas mahals at a cost of Rs. 293 from the Darjeeling Improvement Fund. In Bogra a new village road was constructed during the year. The fair-weather road leading to the Government market at Rukindipur has been completed at a cost of Rs. 207. The village roads are constructed and repaired from the funds of the District Board placed for the purpose at the disposal of the Manager of the Jaipur Government estates.

Cultivation of new staples.

59. In Jalpaiguri a sum of Rs. 502 has been expended on the model farm started at Mainaguri for agricultural experiments and cultivation of new staples. The cultivation of Naini Tal potato was successful. The result of cultivation of potato in Pabna was fairly good in some places, and in others the crops failed entirely. The cultivation of wheat in some estates was a failure, but on one the outturn was satisfactory.

Agricultural improvements, implements, machinery, &c.

60. No agricultural implements were tried during the year.

Working of the Public Demands Recovery Act.

61. A statement showing the working of the certificate procedure in each district of the Division is given in Appendix XXI. The number of certificates issued was almost the same as in the preceding year, but disposals were somewhat less, so that the entries in the pending column increased from 2,418

to 3,151. The increase is mainly in Jalpaiguri, and is due to the substitution in that district of the certificate procedure for that of summary sale in realising land revenue. The realisations were generally made before sale of property, only Rs. 4,808 having been recovered by the latter method, against Rs. 17,200 last year.

Land acquisition.

62. On a reference to Appendix XXII (land acquisition work) it will be observed that the number of institutions and disposals was fewer than in the previous year. In the case pending since 1888 in Rajshahi the final report has been submitted since the close of the year. In Jalpaiguri the case pending since December 1890 refers to the land taken up for the Bengal-Duars Railway. Some changes in the line having been decided on, fresh requisitions were received from the Engineer-in-Chief, for which the final report of the case could not be submitted. In Darjeeling the two cases are pending before the civil court. In Rangpur the three cases pending from the preceding year were all disposed of during the year under report, but the final reports could not be submitted owing to the non-appearance of some of the parties to take payment of the compensation awarded to them. Of the two cases pending in Bogra, one has since been disposed of and the other is before the High Court. In Pabna six out of the nine cases are pending more than one year. Of these in four the final reports have been submitted. In one the necessary enquiries for making an award have been completed.

Partition.

63. Appendix XXIII shows partition work in the several districts of this Division during the year of report. It is satisfactory to observe that disposals exceed institutions, and that some progress is being made in reducing the number of pending cases. In Pabna, although only one case is shown as finally completed, the partition of five estates out of the eight pending cases was sanctioned by this office during the year. In one of these, further proceedings are pending before the Board: but the remaining four cases are entered as pending only until possession be given to the parties of their several shares. Pabna was one of the worst districts in this Division for partition work, and the Collector, Kumar Gopendra Krishna Deb, deserves credit for having put this part of the administration in order. There has been an improvement clearly indicated on my inspections in the other districts, except Rajshahi. As to it I can report no progress actually made, but the Collector states that he is now giving special attention to the subject, and hopes to complete a large number of cases during the current year.

Registration of land mutations.

64. Appendix XXIV shows the number of mutation cases instituted and disposed of in the several districts of the Division during the year. The disposals were larger than the institutions, and the number of cases pending at the close of the year was smaller than that with which it opened. Of the pending cases only four are of more than six months' duration, viz., two in Rajshahi and two in Darjeeling. In Rajshahi the two cases are pending at the request of the parties. In Darjeeling the two are hotly contested cases. The parties being absent from the station owing to unavoidable causes, the case had to be put off for some time. They are now approaching completion.

The instructions contained in the Board's circular order No. 3 of September 1891 dispensing with the necessity of recording evidence of possession in uncontested land registration cases have been duly observed by the registering officers. The change has been satisfactory, in as much as it leads to speedy disposal of cases and saves much trouble and expense to the applicants. It has not occasioned any fraudulent registration.

The registers prescribed by the Act are generally in good order.

Working of the Tenancy Act.

65. The Collectors report that the elaborate form of rent receipt prescribed by the Bengal Tenancy Act has come into general use. The receipts form the chief evidence in all suits for arrears, or involving the issue so common in Bengal, what is the customary rent in a particular holding, village or pargana? Their completeness has been guaranteed, as far as it is possible so to do, by a provision in section 56 of the Act, that a receipt which does not contain

the prescribed particulars shall be taken as an acquittance in full of all demands. We are thus gradually obtaining in Bengal, by an automatic system involving no expense, much of the benefit which is secured elsewhere only by a costly establishment, including an accountant in every village. The other provisions made by the Act for the protection of raiyats have proved effectual, and it is to their operation that we owe the cessation of the attempts to enforce the surrender of occupancy rights, or the enhancement of rent beyond customary limits, which at one time disturbed the tranquillity of this Division. The law has thus attained its main object, and it has also proved an efficient instrument for the realisation of rent.

66. The following statement shows details as to some operations under the Bengal Tenancy Act VIII of 1885 :—

Division.	Districts.	Transfer of tenures. (a) Voluntary, section 12 (3).	(b) By decree sale, sections 13 (2) and 14.	(c) By succession, section 15.	Commutation of rent payable in kind, section 40.	Appraising of produce where rent is paid in kind, sections 69 and 70.	Registration of improvements, section 80.	Certificate of Collectors as to acquisition of land for building or other purposes, section 84.	Notices of resumption of land by landlords, section 87 (2).	Written permission to landlords to measure land under section 90.	Applications by Collectors for appointment of common manager under section 93.	Applications made for the survey and record of rights under Chapter X.	Applications made for the survey and record of proprietors' private lands under Chapter XI.	Local enquiries held by the order of a Court, section 153.
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Rajshahi	Rajshahi	110	3	1	...	...	1	...	...	...	...	...	...	...
	Dinajpur	95	2	...	...	...	...	...	8	...	...	1	...	...
	Rangpur	202	...	2	...	...	...	...	2	...	...	...	...	...
	Bogra	47	5	...	...	...	...	...	...	...	...	...	...	...
	Pabna	206	272	1	...	...	...	...	...	...	...	1	...	...
	Total, 1893-94 ...	660	282	4	...	...	1	...	10	...	...	2	...	...
	Total, 1892-93 ...	695	97	5	...	...	12	...	8	...	...	4	...	1

In Pabna eight settlements under the provisions of Chapter X of the Act were carried on during the year, two of which were completed. I did not accept the final reports of the latter as satisfactory, inasmuch as they failed to explain on what principle the rent was fixed. The matter is under discussion. I fear that in that district we have, with reference to the difficulty of finding senior officers who can spare the time, allowed work of this class to fall into the hands of Sub-Deputies hardly fit to perform it.

In Rangpur the survey and settlement of estates Joydeb, Gobda, Borobil, Padamsahar and Goregram are being carried on by a Special Deputy Collector. The work was better done in Rangpur than in Pabna, but the officers employed are rather junior to decide the judicial issues which will come before them. This is the objection which I find to the practical working of the Act. The Collectors have from the first decided that its administration is extra work, not to be done by the regular establishment—a view in which they are entirely supported by their Deputies, who prefer head-quarters to the camp. These officers have had their way, and the smaller settlements fall to Sub-Deputies. For myself I would much sooner see these Sub-Deputies in charge of the treasury and excise, or trying petty criminal cases. Fixing judicial rents is more difficult work than these, and requires more experienced men.

Landlords' fees.

67. Appendix XXV shows deposit and acceptance of landlords' fees under sections 12-13 of the Bengal Tenancy Act VIII of 1885 during the year.

It will be observed that the amount of fees paid was very nearly the same as in the previous year, but in a fewer cases was payment accepted by the landlords. It is reported by the Collectors of Rajshahi and Pabna that most of the landlords are under the impression that their acceptance of the fees would be regarded as confirmation by them of the transfers.

Relations between landlords and tenants.

68. As stated in my Land Revenue Administration Report, the relations between landlords and tenants were exceptionally smooth during the year. With the falling value of the rupee rents have become easy, and are paid

without difficulty; while there has been no general tendency to enhancement. The Collector of Rajshahi refers to a subject of contention which may give considerable trouble hereafter. He writes:—"Towards the end of the year complaints were made by the Muhammadan raiyats of Pananagar in the jurisdiction of the Durgapur outpost that their zamindar had abused, beaten, and otherwise maltreated some of them for alleged slaughter of kine. A discreet Police Inspector was promptly sent to enquire into the condition of affairs; but before he could complete his investigations the parties had made up their differences, and there has been no recrudescence of any disagreement. As the Muhammadans had really killed cows, though in a very unostentatious and perfectly legitimate manner, it is probable that the zamindars had begun to fine, confine and assault the offending raiyats, for they, the zamindars, have always hitherto arbitrarily arrogated to themselves the power to prevent all slaughter of kine in their zamindaris. Very little of what has actually transpired, however, came to light owing to the compromise arrived at. In like manner towards the very end of the year the Muhammadan raiyats of Khoksa and other villages in the Puthea police-station jurisdiction complained of ill-treatment exercised on them by their zamindars for a similar reason. The District Superintendent of Police and a sharp Inspector both made careful enquiries: not much, if any, oppression seems to have been exercised,—at any rate the action of the Magistrate, who called upon the zamindars' people to show cause why they should not be bound down to keep the peace, has effectually quieted matters down, and peace prevails throughout the district." It is a fact that most of the Hindu zamindars endeavour to prevent the slaughter of cattle by their tenants, while the raiyats are generally Musalmans, having a predeliction for the consumption of beef. This has always been a source of occasional conflict, as the landlords have no legal means of enforcing their wishes so far as occupancy tenants are concerned. It may in the near future lead to a serious collision, but there is no local indication at present of the approach of such an event. The danger is that an agitation originating elsewhere may at any moment spread to this Division.

Training of young officers in Survey and Settlement work.

69. In Darjeeling Mr. L. F. Morshead made certain preliminary enquiries as ordered by Government in connection with the revision of the Terai jots. The Lieutenant-Governor, on visiting the locality, was pleased to express approbation of the work done. In Pabna Mr. Beatson-Bell conducted the settlement of some petty estates in the Serajganj subdivision. Mr. C. A. Bell, the present Subdivisional Officer, is acting as Settlement and Revenue Officer of certain estates brought under the operations of the Bengal Tenancy Act. The settlement work of a petty resumed estate is also in his charge. The Probationary Sub-Deputy Collector, Syed Abdul Salek, was employed in Rajshahi from 19th June to 19th November 1893. He specially devoted himself under orders of the Collector to classify the old correspondence in the Collector's record-room. Ample opportunity had also been given to learn the routine of office and court work. The Government orders in regard to training of Sub-Deputy Collectorships were given effect to as far as possible.

Deputy and Sub-Deputy Collectors, &c.

70. Appendix XXVI shows the names of Deputy and Sub-Deputy Collectors employed in each district on the last day of the financial year with details of work distributed to them on that day. There is nothing fresh to be recorded under this head. A statement showing the duties on which Sub-Deputy Collectors were employed during the year and the manner in which they performed them has been separately submitted to Government in the Appointment Department.

XVIII.—ATTACHED ESTATES, INCLUDING COURT OF WARDS.

71. There were 11 estates under the management of the Court of Wards at the commencement of the year, of which 3 were released towards its close—that of the Dighapatiya Kumar, that of his younger brothers, and that of

Paddamati. The four Dighapatiya heirs are young men of great promise, a credit to those who directed their education under the orders of the Court. The Collector remarks: "The eldest ward, Kumar Promoda Nath Roy, attained his majority on the 29th January 1894, on which date the estate was released. He has quite recently travelled extensively all over India, visiting the most important places, and those that have become famous in history. Of the three junior wards, the second, Kumar Basanta Kumar Roy, has passed the B.A. examination successfully with double honours in English and Philosophy. The other two wards, Kumar Sarat Kumar Roy and Kumar Hemendra Kumar Roy, are receiving their education in the Presidency College, and will appear in the next First Arts examination." Both the wards of the Maldwar estate in Dinajpur have obtained their annual class remove in the school. The survey and settlement operations under the provisions of the Bengal Tenancy Act, 1885, were carried on in Lat Lotijhari belonging to the Maldwar Ward's Estate in Dinajpur. The operations were taken in hand in November 1893, and it is reported that the work will be soon completed.

Most of the estates carry considerable arrear, which makes the proportion of collections to total demand appear unsatisfactory; but the year was a good one for realisation on the whole, inasmuch as the collections exceeded the yearly income (current demand) in every district except Rajshahi, and in Rajshahi except on the Dighapatiya estates. As regards the latter, the Collector observes that the time for suing the patnidars came round after the estate was released, and that the tenants preferred to put off payment until that date. It is always impossible to hold a manager responsible for good collections during the last few months of a minority; the raiyats generally wish to keep something in hand with which to greet the landlord on his coming of age, and the expiring authority of an agent is not sufficient to overcome this natural tendency. I am not satisfied with the degree of activity shown in examining old arrears with a view to writing off those which are irrecoverable. Many entries in this account relate to money never in fact due, many to sums long since barred by limitation, but it is hard to induce Collectors or Managers to take the trouble necessary to clear the account. The latter regard such labour as worse than wasted, inasmuch as it can at best result in reducing the claims of their wards. They also object to the responsibility and drudgery of the task, but until it is performed no estate account can be considered satisfactory.

XIX.—EXCISE.

72. The statements bearing No. XXVIII, which are appendices to this report, show the work of the districts and the Division in the Excise Department for the year 1893-94. The total revenue realised under this head in 1893-94, exclusive of the cost price of opium, was Rs. 9,48,572 against Rs. 8,87,549 in the previous year, showing an increase of Rs. 61,023. If the amount of Rs. 3,840, the duty of 15 maunds of ganja issued to the North-Western Provinces from Rajshahi, be deducted from the total receipts, the divisional increase would come to Rs. 57,183. This increase was obtained from all heads except pachwai, under which there was a decrease of Rs. 322 only. There were 113,908 gallons of country spirit consumed during the year against 123,955 gallons of the previous year, showing a decrease of 10,047 gallons. The consumption of ganja and opium was 462 maunds and about 190 maunds against 469 and 189 maunds respectively in the preceding year.

The rate per head of the population of the total excise revenue was as follows in the several districts:—

	As.	P.		As.	P.
Rajshahi	1	5	Rangpur	1	4
Dinajpur	1	3	Bogra	1	3
Jalpaiguri	3	8	Pabna	1	3
Darjeeling	12	5			

The consumption of country spirit is highest in Darjeeling and of opium in Rangpur. The increase in excise revenue is generally attributed to better settlement and to the increased rate of duty on ganja.

73. The subjoined table gives particulars regarding ganja cultivation during two years, viz. 1893-94 and 1892-93 :—

Particulars regarding ganja cultivation.

Districts.	Area cultivated in bighas.		Number of cultivators.		Produce in maunds.		Average produce per bigha.	
	1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.
1	2	3	4	5	6	7	8	9
							Mds. s. ch.	Mds. s. ch.
Rajshahi	2,298	2,244	2,082	1,811	4,417	5,917	1 36 14	2 25 7
Dinajpur... ...	674	576	639	566	1,878	2,436	2 31 7	4 9 2
Bogra	566	475	708	502	1,279	1,402	2 10 6	2 38 1
Total ...	3,538	3,295	3,429	2,879	7,574	9,755	2 5 10	2 38 6

I quote at lengh the remarks made by Mr. Price, Collector of Rajshahi, in connection with ganja cultivation, the subject being of special interest at the present time :—

"In the year of report 70 persons were licensed to act as ganja brokers against 75, 75, 67 and 69 in 1892-93, 1891-92, 1890-91 and 1889-90, respectively. These men are also themselves cultivators of ganja, and generally are of good character. These brokers are a sort of middlemen between the cultivators and the wholesale dealers. Those wholesale dealers who cannot come themselves authorise these brokers to purchase ganja for them in Naugaon. One rupee in court-fee stamp is realised as fee from every broker. The court-fee stamp is affixed to the broker's licenses and duly punched.

"The ganja mahal comprises a compact tract about 64 square miles in area situated in the districts of Rajshahi, Bogra, and Dinajpur. Within this area about 800 to 1,000 acres of land are cultivated each year for the production of ganja. Only high lands are fit for ganja cultivation. The tract was divided into three blocks for the purposes of administration, and each block or circle was placed in charge of a supervisor. The decrease in the cultivation is due chiefly to the following causes :—

(1) The excessive production of the previous year's crop.
(2) The low price secured in the previous year by the cultivators owing to excessive production.
(3) The excessive rain of the past year, which kept the land too moist for a long time.

"Of the area for which cultivation licenses were granted 45 bighas produced no ganja. The actual producing area therefore was 3,295 bighas, viz., in Rajshahi 2,244 bighas, in Bogra 475, and in Dinajpur 576 bighas as shown in the statement. This area produced 9,755 maunds of ganja. The average yield was 2·96 maunds per bigha against 2·14 maunds of the previous year. As usual five kinds of ganja were manufactured during the year under report, viz., round, flat small twigs, flat large twigs, chur (round), and chur flat). The quantity of each kind of ganja manufactured is shown below :—

	Mds. s.
Round	2,628 8
Flat small twigs	4,485 14
Flat large twigs	1,036 37
Chur, round...	1,604 4
Chur, flat ...	
Total	9,754 23

"It will thus be seen that the manufacture of chur ganja produced 1,604 maunds and 4 seers against 1,410 maunds and 34 seers of the previous year.

On account of disproportionate difference of duty between chur and flat ganja, there was a great demand for the former, and the cultivators deliberately converted flat into chur. This attracted my notice, and I recommended an increase of duty on chur ganja in order that the rates of duty on the intoxicant parts of the plant might be equalised. My recommendation was accepted by the Government, and the result was that the duties on chur and round ganja were raised from Rs. 8 and Rs. 7-4 to Rs. 9 and Rs. 7-8 per seer, respectively, from 1st January 1894.

"The quantity of ganja exported during the year from Naugaon to the Lower Provinces of Bengal, including Assam, Kuch Bihar, and the North-West Provinces, was 7,434 maunds 1 seer 1 chitak against 7,136 maunds 3 seers 8 chitaks in the previous year. The increase is due to the low price asked by the cultivators on account of the good outturn of the crop in 1892.

"Ganja was exported to all the districts in Bengal. The quantity of ganja exported to the different countries during the year under review is given below:—

	Mds.	s.	c.
Bengal	6,616	32	7
Assam	725	38	6
Kuch Bihar ...	76	10	4
North-West Provinces ...	15	0	0
Total ...	7,434	1	1

"The duty levied on ganja exported to the North-West Provinces amounted to Rs. 3,840, which sum was realised and credited into the Naugaon sub-treasury. The duties on ganja exported to Assam and Kuch Bihar are not realised at Naugaon."

The rates of duty from 1st April to 31st December 1893 were—

In the districts of Lower Provinces of Bengal—

	Rs.	A.	P.
Chur	8	0	0
Round	7	4	0
Flat small twigs ...	7	4	0
Flat large twigs ...	6	0	0

In Orissa Division—

Chur	6	8	0
Round	6	0	0
Flat	4	8	0

These rates were increased from the 1st January 1894, and the present rates are given below:—

In Bengal and Bihar—

	Rs.	A.	P.
Chur	9	0	0
Round	7	8	0
Flat small twigs ...	7	4	0
Flat large twigs ...	6	0	0

In Orissa Division—

Chur	7	8	0
Round	6	4	0
Flat	4	8	0

During the year under report 40 cases were brought to trial in connection with ganja against 43 of the previous year, of which 8 were for illegal possession, 1 for illegal sale, 1 for failing to account for stock, and 30 for breach of condition of license. Out of 40 cases Sub-Deputy Collector detected 1, Supervisors 35, Excise Sub-Inspector 1, and Police 3. All the cases ended in conviction excepting one detected by the Excise Sub-Inspector. It is reported that the Hemp Drugs Commission visited Naugaon in January last and saw the ganja in the fields and inspected the different processes of manufacture.

Enquiries were also made by them to ascertain whether it would be possible by an extension of the cultivation of ganja to supply the whole of India from the ganja manufactured at Naugaon.

The average outturn of ganja per bigha in Dinajpur was almost double that in Rajshahi and Bogra. This is attributed to the fact that a plot of waste land in Kirtipur in the district of Dinajpur was reclaimed during the year for ganja cultivation. Plants sown on this new soil had a marked exuberance of growth and yielded an abundant crop.

With regard to the small amount of the ganja exported to the North-West Provinces I attribute it to the operation of the rule requiring the prepayment of duty in such cases. That rule is opposed to an elementary principle of political economy, and is also at variance with the practice generally adopted in regard to districts supplied from Rajshahi. I have suggested its abolition.

The following statement shows the quantity of ganja passed through the ganja weighing office, with the duty leviable on it, during the year 1893-94 *as compared with the figures of preceding year* 1892-93.

Years.	Rate of duty at Rs. 5 per seer.		Rate of duty at Rs. 5½ per seer.		Rate of duty at Rs. 6 per seer.		Rate of duty at Rs. 6½ per seer.		Rate of duty at Rs. 6½ per seer.		Rate of duty at Rs per seer.

XX.—STAMPS.

74. The subjoined table shows the stamp revenue derived during the year 1893-94 :—

Districts.	Court-fees.	Copies.	Non-judicial adhesive.	Receipt.	Non-judicial impressed.	General.	Court papers.	Total.	Remarks.
1	2	3	4	5	6	7	8	9	10
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	
Rajshahi	1,16,241	10,405	7	3,106	41,173	2,393	2,752	1,76,077	
Dinajpur	1,61,578	6,625	27	6,322	73,112	3,477	3,607	2,54,748	
Jalpaiguri	85,003	4,589	71	4,277	28,795	1,922	1,582	1,26,239	
Darjeeling	22,530	764	20	4,801	8,645	102	277	37,199	
Rangpur	2,68,932	15,037	18	4,836	1,07,148	4,029	6,480	4,06,480	
Bogra	88,267	5,163	...	1,462	44,360	1,409	2,167	1,42,828	
Pabna	2,08,707	12,266	4	2,951	68,695	7,936	3,907	3,04,466	
Total for 1893-94 ...	9,51,318	54,789	147	27,755	3,71,928	21,268	20,772	14,47,977	
Total for 1892-93 ...	9,42,344	48,275	140	24,398	3,60,594	19,424	19,777	14,14,952	

Compared with the previous year there was an increase of Rs. 33,025 in the sale of stamps of all descriptions. The moderate growth of the revenue from year to year is due to the progress of the country in wealth and population.

The proportion of revenue to population in the case of non-judicial stamps is Re. ·05 for all the districts, except in Rajshahi and Darjeeling, where it is ·03 and ·06 respectively. As regards court-fees, including copies, the divisional average is Re. ·1 per head. Taking each district separately, the proportion comes to Re. ·1 everywhere, except in Rajshahi, where it is ·09.

The number of cases in which duty and penalty were realised by Civil Courts under section 34 of the Indian Stamp Act I of 1879 was 275 against 252 in the previous year, showing an increase of 23 cases. The amount of duty and penalty realised was Rs. 2,026 against Rs. 1,796 in the preceding year, showing an increase of Rs. 230. The number of cases in which duty and penalty were levied by Collectors under section 37 was 306 against 232, showing an increase of 74 cases, and the amount of duty and penalty realised was Rs. 2,553 against Rs. 1,638, showing an increase of Rs. 915.

A case occurred in the district of Bogra in which duty and penalty to the amount of Rs. 347 were realised during the year under sections 19E and 19G of the Court-fees Act VII of 1870. This is the only instance of the kind.

The number of prosecutions instituted for the infringement of the provisions of the Indian Stamp Act was 118 against 192, the number of persons convicted was 90 against 127, the amount of fines imposed was Rs. 460 against Rs. 608, and the amount disbursed as rewards was Rs. 124 against Rs. 186 in the preceding year.

XXI.—INCOME-TAX.

75. The general result of income-tax operations is summarised in the following abstract:—

Years.	Number of persons assessed.	Demand (tax).	Collections.	Percentage of collections to demand.	Distress warrants.	Penalties.	Expenditure.	Percentage of expenditure to collections.	Objections.
1	2	3	4	5	6	7	8	9	10
		Rs.	Rs.				Rs.		
1892-93 ...	12,689	2,98,695	2,94,700	98·6	700	3,928	17,344	5·8	993
1893-94 ...	12,942	3,03,559	3,01,608	99·3	539	2,315	16,754	5·5	773
Increase or decrease ...	+253	+4,864	+6,908	+7	—161	—1,613	—590	—·3	—220

These figures indicate improvement in every part of the work. The assessment was larger than in the previous year, the percentage of collections better, yet there was a decrease in expenses, in the number of distress warrants issued, of penalties inflicted, and of objections made.

The following statement shows the percentage of collections on account of current and arrear demand, including tax, penalties, &c., in the several districts during the year under report:—

Rajshahi ...	... 98·6	Darjeeling ...	... 99·4
Dinajpur ...	... 98·3	Rangpur ...	... 97·2
Jalpaiguri ...	... 97·4	Bogra ...	... 99·8
	Pabna	... 99·8	

The percentage of collections on the final demand of the current year on account of tax only in the different districts is shown below:—

Rajshahi ...	... 99·7	Darjeeling ...	... 99·7
Dinajpur ...	... 98·7	Rangpur ...	... 98·6
Jalpaiguri ...	... 99·7	Bogra ...	... 99·9
	Pabna	... 99·9	

It will be observed from the above statement that the collections exceeded the standard of 95 per cent. in all the districts of this Division.

The proportion of persons assessed to population for the Division was 1 to 619 against 1 to 632 in the preceding year, and the average incidence of tax was 1 to every 26 persons against every 27 persons in the preceding year.

The number of cases in which taxes were realised by the sale of property was 70 against 126 in the preceding year.

XXII.—MONETARY ARRANGEMENTS.

76. The circulation of currency notes during the year and the preceding year will be seen from the following statement:—

	Rajshahi.				Dinajpur.				Jalpaiguri.				Darjeeling.

Notes of Rs. 500 and upwards.	9,48,500	4,04,500	10,33,000	3,95,000	1,17,000	1,26,000	1,15,500	1,22,500	68,500	1,37,500	53,000	1,29,500	28,15,500	23,73,000	29,86,500
Ditto of smaller values.	4,51,395	3,61,660	4,88,180	3,64,480	1,36,100	1,40,945	1,29,950	1,47,400	1,18,920	95,255	1,20,940	1,27,300	26,33,775	2,65,555	25,62,870
Total ...	13,99,895	7,66,160	15,21,180	7,59,480	2,53,100	2,66,945	2,45,450	2,69,000	1,87,420	2,32,755	1,73,940	2,56,800	54,49,275	50,28,555	55,49,370

It will be seen from the above figures that there has been a falling off during the year both under the heads of receipts and issues of about four lakhs in each case. The decrease in the receipts is chiefly owing to the fact that in Rangpur under the order of the Accountant-General the Collector ceased to cash currency notes. The decrease in issues was owing to a smaller amount of notes having been issued from the same district to "other treasuries." There was a considerable increase in the receipt of notes in Dinajpur. This is said to be due to the fact that the *mahajans* carried on extensive jute and rice trade which the district produced abundantly during the year of report by cashing notes at the treasury.

77. The following table shows the number of depositors and the amount of deposits in the Savings Banks at the close of the year 1893-94 as compared with the previous year:—

Savings Banks.

Districts.	Number of depositors at the close of—		Amount of deposit at the close of—		Remarks.
	1892-93.	1893-94.	1892-93.	1893-94.	
1	2	3	4	5	6
			Rs.	Rs.	
Rajshahi ...	2,686*	2,999	4,50,164*	4,96,456	
Dinajpur ...	3,029	3,229	3,91,871	4,45,403	
Jalpaiguri ...	1,704	1,970	1,57,538	1,87,204	
Darjeeling ...	1,446	1,705	1,49,465	1,83,346	
Rangpur ...	4,246	4,616	5,74,492	6,15,522	
Bogra ...	1,663	1,813	2,50,047	2,46,522	
Pabna ...	6,197	5,565	2,31,096	2,11,338	
Total ...	20,971	21,897	22,04,673	23,85,791	

* Revised figures.

The increase appears to be normal. I observe that it does not extend to Pabna or Bogra, which have not shared in the prosperity of the rest of the Division during the year.

78. The following table shows the total number and amount of money-orders issued and received during the years 1892-93 and 1893-94:—

Money-orders.

Districts.	Number and amount of orders issued.				Number and amount of orders received.			
	1892-93.		1893-94.		1892-93.		1893-94.	
	Number.	Amount.	Number.	Amount.	Number.	Amount.	Number.	Amount.
1	2	3	4	5	6	7	8	9
		Rs.		Rs.		Rs.		Rs.
Rajshahi ...	51,630	9,38,159	56,530	11,30,198	25,732	6,48,806	26,226	8,05,842
Dinajpur ...	51,409	18,46,603	61,613	12,04,110	15,868	3,37,408	26,052	6,24,763
Jalpaiguri ...	55,224*	18,60,719*	62,776	13,00,543	10,298*	3,58,903*	10,752	4,07,155
Darjeeling ...	52,142	10,34,260	53,242	10,66,893	14,747	6,41,990	15,075	7,09,634
Rangpur ...	95,437	18,09,982	109,835	20,24,464	22,783	10,66,871	27,679	9,35,330
Bogra ...	38,030	8,20,165	44,144	9,34,827	16,433	2,40,449	10,398	2,76,496
Pabna ...	63,778	14,31,061*	70,947	14,30,390	45,355	9,72,375	40,976	11,36,407
Total ...	407,650	97,40,950	459,087	91,00,425	151,216	42,75,802	166,158	48,95,627

* Revised figures.

The figures show an increase in the number of money-orders issued and received, except as regards Bogra, where there has been a falling off in regard to receipts. The amount remitted in this form has also increased everywhere, except in regard to the issues in Dinajpur, Jalpaiguri, and Pabna. Apparently the trades making large remmittance to these districts found some cheaper agency. The tendency everywhere is to the growth of this department of public business, particularly as a means of transmitting small amounts.

XXIII.—RAILWAYS AND OTHER PUBLIC WORKS.

79. A proposal for constructing a branch railway from Nilphamari to the neighbouring jute mart at Joyganj was under consideration during the year. The route has been surveyed at the cost of the zamindar who promotes the scheme, and an application for leave to form a company has recently been received by me for transmission to Government.

(*a*) Railways and Railway feeder-roads.

The platelaying of the Bengal Duars Railway was practically completed by the end of March last, but on the section from Mal Bazar to Damdim several bridges were still in progress and others not commenced. The work has been pushed on vigorously. One new feeder road from Ramshaihat to Gairkata is nearly completed, and one old one from Ramshaihat to Nagrakata was much improved. The Northern Bengal State Railway and the Darjeeling-Himalayan Railway continued to work satisfactorily. The Deputy Commissioner thinks that more stringent regulations are required for the safety of the public on the Darjeeling Hill Cart Road in and outside the train. Two feeder roads were added to the list of feeder roads in the district of Rangpur, viz. Gaibanda to Ghoraghat and Rangpur to Baluabandar.

There is no irregation or other public works of importance in this Division.

The Imperial and Provincial buildings transferred to the District Boards for maintenance were generally kept up economically. The Boards also undertook the construction of some original works which they were asked to do by Government. The requisite funds for the works were placed at their disposal by Government.

(*b*) Steamer service.

80. The India General Steam Navigation Company's steamers ply daily between Rampur Boalia and Damukdia and bi-weekly between the former station and Malda. The District Board of Rajshahi has withdrawn the subsidy for the Malda service, which it thinks is no longer required, as the Company seems to have been making a profit in the business. The District Board of Pabna continues to pay a subsidy of Rs. 300 for the steamer service between Pabna and Kushtea. The service was more regularly maintained during the year of report than in the previous year.

(*c*) Tanks, wells, and roads constructed by private individuals.

81. The total number of tanks and wells and roads and bridges constructed and repaired by private individuals during the year 1893 and the cost of their construction and repairs in the several districts of the Division are shown in the following table:—

Districts.	Number of tanks and wells.	Cost.	Number of roads and bridges.	Cost.	Remarks.
1	2	3	4	5	6
		Rs.		Rs.	
Rajshahi	52	35,568	2	600	
Dinajpur	9	5,100	2	800	
Jalpaiguri	...	...	14	7,822	
Darjeeling	1	5,000	...	...	
Rangpur	9	4,400	...	...	
Bogra	24	14,488	...	...	
Pabna	6	8,300	...	...	
Total ...	101	72,856	18	9,222	
Total for 1892 ...	140	88,213	3	2,600	

XXIV.—COMMUNICATIONS.

82. The amount spent on original works and repairs by the several District Boards and the Darjeeling District Road Cess Committee is shown in this table:—

Districts.	Original works.		Repairs.		Total proposed amount (columns 2 and 4).	Total actual expenditure (columns 3 and 5).	Percentage.
	Total amount proposed to be spent.	Total actual expenditure.	Total amount proposed to be spent	Total actual expenditure.			
1	2	3	4	5	6	7	8
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	
Rajshahi ...	12,008	12,042	38 272	34,978	50,280	47,020	93·5
Dinajpur ...	53,294	49,760	40,065	39,258	93,359	89,018	95·4
Jalpaiguri ...	64,865	62,547	28,065	26,736	92,930	89,283	96·
Darjeeling ...	3,668	21,387(*a*)	13,085	11,545	16,753	32,932	196·5
Rangpur ...	40,148	41,140	39,314	36,344	79,462	77,484	97·5
Bogra ...	46,143	4,148(*b*)	23,360	14.400	69,503	18,548	26·6
Pabna ...	12,322	11,956	23,461	23,008	35,783	34,964	97·7
Total for 1893-94	2,32,448	2,02,980	2,05,622	1.86,269	4,38,070	3,89,249	88·8
Total for 1892-93	2,72,395	2,01,710	2,30,436	2,15,438	5,02,831	4,17,148	82·9

(*a*) This amount includes Rs. 21,176 on account of the Panisghatta suspension bridge which had been actually spent in 1892-93, but accounted for in the year under report. Excluding this sum the percentage of expenditure comes to 70·1.
(*b*) No explanation has been offered of this small expenditure compared with the amount proposed to be spent.

The roads in the districts of Rajshahi and Dinajpur were kept in fair order. The important roads in the district of Jalpaiguri were kept in good condition and all others in passable order throughout the year, with the exception of one important feeder road from Ramshaihat to Nagrakata which was severely damaged and washed away by the extraordinary floods of the Jaldhaka river. Prompt steps were, however, taken to restore communication, and this was done with great trouble and difficulty. Many new roads have been constructed in the Duars during the last few years, but more are still wanted.

The important roads in the district of Darjeeling, both in the Terai and Hills, are in charge of the Public Works Department. The condition of the roads in this district is generally good. Some of the Public Works Department roads require to be bridged.

The district of Rangpur is well provided with roads which are generally in good condition.

The state of communication in Bogra is fair. Some of the roads are good and others fair except in the rainy season.

The district of Pabna is subject to annual inundations, and the cost for repairs is a very heavy annual charge, thus there is very little money left for original works or for improvements and bridging. The general condition of the roads is not satisfactory. I was particularly struck by the failure to connect the town of Pabna with the railway by a raised and bridged road; it is so breached as to be worse than the unambitious track by which communications were maintained twenty years ago.

83. The amounts spent in the construction and repairs of village roads in each district during the year are shown below:—

Village roads.

	Rs.
Rajshahi	5,864
Dinajpur	3,160
Jalpaiguri	158
Darjeeling	20
Rangpur	9,517
Bogra	714
Pabna	2,809
Total ...	22,242

As stated in the previous year, little can be gained by comparing these figures, as the system of classifying village roads is different in each district.

There are 12 village roads in the Terai which were newly taken over by the Darjeeling District Road Cess Committee under its control during the year. One of these was repaired at a cost of Rs. 20 by a member of the Terai Branch Road Cess Committee. The village roads in the hill khas mahals are repaired by the raiyats themselves at their own cost under a condition of their patta. The amount spent by the Jalpaiguri District Board on village roads is also very small, viz. Rs. 158 only. It is explained that more money was not available for such work, as heavy expenditure was incurred in constructing new roads and repairing old ones. The sums of Rs. 1,652 and Rs. 400 were advanced to the Manager of the Jaipur Khas Mahal and Munshi Mobarakali Choudhuri, a member of the Bogra District Board, respectively, for the construction and repairs of the khas mahal village roads and Dupchachia-Gaibandha village road. The advance could not be adjusted during the year of report; hence the small expenditure in Bogra under this head.

The agencies employed in the construction and repairs of village roads were generally headmen of villages. In Dinajpur, Rangpur and Pabna the work was executed by contractors.

Arboriculture.

84. In Rajshahi no new trees were planted on roadsides. The existing trees were maintained at a cost of Rs. 17-10. In addition to this Re. 1-8 was spent in looking after trees in the Naugaon dispensary compound. The claims upon this district for the maintenance of existing roads are large, and it is difficult to undertake any new work. The Dinajpur District Board spent Rs. 999 in planting mango, jack, jam, bakul, mahogany, debdara, semul and foreign trees and in maintaining 3,347 trees. The Jalpaiguri District Board planted 350 mango and jack trees on the sides of the road from Jalpaiguri to Damdim Central Emigration road and the Ganges-Darjeeling road at a cost of Rs. 350, and maintained 5,550 trees at a cost of Rs. 587. Nothing was done by the Darjeeling Road Cess Committee in this direction. One thousand two hundred and twelve new plants of various sorts in the nursery gardens and 9,557 existing trees on roadsides were maintained by the Rangpur District Board at a cost of Rs. 931. The existing trees were maintained in Bogra at a cost of Rs. 53. There is much room for increased enterprise in this direction. The Pabna District Board spent Rs. 611 in planting new fruit trees and Rs. 1,004 in maintaining existing trees.

XXV.—WORKING OF THE LODGING-HOUSE ACT.

85. The Act is not in force in any district in this Division.

XXVI.—EDUCATION.

86. The educational statistics of the year will be found in Appendix XXX. The following table brings together some of the more prominent results:—

[Division Rajshahi; number of boys of school-going age 616,909.]

Class of School.	Number of schools at the end of March.		Number of pupils at the end of March.		Cost per head per pupil.	
	1893.	1894.	1893.	1894.	1893.	1894.
1	2	3	4	5	6	7
					Rs. A. P.	Rs. A. P.
High English	19	21	4,001	4,096	23 0 4	25 11 3
Middle do.	87	95	6,020	6,269	11 13 8	11 7 4
Middle vernacular ...	136	138	7,162	7,127	7 3 6	7 4 0
Primary schools	3,101	3,292	80,808	85,994	2 7 2	2 7 4
Special do.	18	17	448	583	38 13 2	38 1 10
Total ...	3,361	3,563	98,439	104,069	4 6 0	4 7 1

The increase of some 6 per cent. in the number of pupils during the year is satisfactory, and last year also there was an increase of between 2 and 3 per cent. Considering that five-sixths of the male population and almost all girls continue to grow up in ignorance, there is ample room for future progress. The districts rank as follows in the order of educational merit as indicated by the proportion of those under instructions to boys of school-going age:—

Districts.	Number of boys of school-going age.	Number under instruction.		Percentage of pupils to boys of school-going age.	
		1892-93.	1893-94.	1892-93.	1893-94.
1	2	3	4	5	6
Rajshahi	98,151	13,694	13,486	13·9	13·7
Dinajpur	121,807	21,039	22,046	17·2	18·0
Jalpaiguri	54,699	7,519	8,655	13·7	15·8
Darjeeling	18,457	3,229	3,474	17·4	18·8
Rangpur	159,272	22,477	24,038	14·1	15·0
Bogra	62,837	11,150	12,487	17·7	19·8
Pabna	101,686	19,331	19,883	19·0	19·5
Total ...	616,909	98,439	104,069	15·9	16·8

The low place occupied by Rajshahi on the list is remarkable. For many years there has been noticed in that district a want of zeal and success in dealing with primary education. I observe that in Rajshahi no rewards are given to patshalas which do not present ten pupils for examination, and that a maximum has been fixed of Rs. 18 the half year for a lower and Rs. 21 for an upper primary school. The effect is to stint the larger and starve the smaller schools. The arrangement probably accounts for the failure of the district to progress with others in this respect.

87. University teaching is represented in the Division by the Rajshahi College. As to this institution the District Magistrate, Mr. Price, writes:—

College.

"The year was remarkable for the very large increase in the number of students of this College, which advanced from 103 on the 31st March 1893 to 166 in the following December, the largest register ever known in the history of the College, though it again declined to 138 at the close of the year in consequence of the withdrawal of students from the 2nd and 4th year classes, after the completion of the term of six months' further study required by the University from those who have previously failed. The average number on the rolls monthly was 163 against 130 of the preceding year. The average daily attendance was 84 against 86 in 1892-93. The total expenditure for the year under report amounted to Rs. 24,042-13-6, showing a decrease of Rs. 28-14-10 as compared with the expenditure of the previous year. During the year of report Rs. 7,239-3-6 were paid from the Provincial revenues for the maintenance of the College, and the rest of the expenditure was met from endowments and fees. Twenty students appeared at the B.A. examination, of whom two passed. Of the 20 students 11 took up the A. course, of whom none passed, and nine the B. course, of whom two passed. Of the 64 students that presented themselves for the F.A. examination 24 passed, 4 being placed in the 2nd and 20 in the 3rd division.

"The number of students on the rolls of the Law Department on the 31st March 1894 was 16 against 5 on the same date of the previous year. The average monthly roll number rose from 10 to 17. There has been a total failure in the year under report in the B.L. examination. Of the three candidates who were sent up all failed Of the three students who presented themselves at the Pleadership examination two were successful in passing.

"The Oriental Department is now in a flourishing condition, and has gained much popularity. The number of students on the rolls of the Oriental Department on the 31st March 1894 was 79 against 51 and 74 on the corresponding date of 1892 and 1893 respectively. The average daily attendance of the students was 69 per cent. against 78 in the preceding year."

The College is evidently making great progress in the matter of attendance, and it is to be hoped that better results may hereafter be obtained at the examinations.

Secondary and primary education.

88. The number of high English schools has increased from 19 to 21, but I observe with surprise that there has been but the nominal addition of 95 to the attendance. The increase in unaided middle English schools from 13 with 819 pupils to 22 with 1,185 pupils indicates that there is no falling off in the demand for the very remunerative form of education. Primary teaching is progressing slowly, but at a rate more rapid than education of other classes. Mr. Greer, of Darjeeling, observes:—"Primary schools in the Hills, as far as I have seen on tour, work satisfactorily. There is room for a considerable extension of operations if teachers were forthcoming. The mission schools at Kalimpong do excellent work. Dr. Ponder established a class for medical students during the year. There appears to be a great opening for intelligent pupils in this direction. The Terai schools compare most unfavourably. The teachers appear to have little interest in the work, and the inspections of departmental officers are frequently carried out in a perfunctory manner." The Rajshahi figures show a decline from 13,694 to 13,486 pupils, which the District Magistrate explains was due to the unhealthiness of the autumn season. In Jalpaiguri, where progress is satisfactory, His Highness the Maharaja of Kuch Bihar contributes Rs. 1,824 towards aiding primary schools in his zamindari—an excellent example to be commended to all landowners in a position to show liberality. In Rangpur primary school pupils have increased from 18,191 to 19,626. Mr. Harris observes:—"The teachers are striving hard to raise and improve the status of their schools on hopes of their earning rewards at the standard examinations." As to Dinajpur Mr. Tute writes:—"I am glad to see any increase in primary education, but it is yet very backward. When I was on tour this year I found a number of schools which do not get recognition as primary schools. These are short-time schools, that is to say schools to which pupils go when they are not engaged in agriculture. The policy has been hitherto to ignore these schools and to debar them from the privileges extending to other primary schools. This I consider to be a very wrong policy. By attending schools when they can the pupils show a desire for instruction, and this desire must be encouraged. It will involve some extra trouble to the Sub-Inspector to prevent bogus institutions claiming stipends, but this is not unsurmountable. At any rate it must be forced. I am now considering a plan for recognising and encouraging these half-time schools. They will form the nucleus of a widespread system of primary education. Partial it may be, but half a loaf is better than no bread." In these remarks I concur. With five-sixths of the male population altogether unassisted we cannot prudently neglect even very humble auxiliaries in the work.

Special schools.

89. There are two technical schools in the Division—one at Rangpur, the other at Pabna. The first cost the District Board Rs. 1,874 against Rs. 1,099 last year, while the expenditure from private sources decreased from Rs. 1,774 to Rs. 1,197. The daily attendance diminished from 74 to 54; but this may be because the boarding-house was burned down. At Pabna there were only 24 pupils on the rolls on the 31st March. The cost to the District Board is very considerable. I have asked the Magistrate to see whether private aid can be collected for its support. It seems too much of an experiment to be conducted entirely at the rate-payers' expense. I found the instructions given in Rangpur very suitable, but Pabna has not as yet achieved any success.

Female education.

90. There were 2,308 girls attending 133 female schools against 2,024 attending 118 schools last year. The number of girls at boys' schools increased from 1,694 to 2,027. Female education is thus making good progress.

XXVII.—DISPENSARIES AND HOSPITALS.

91. The following table shows the working of the dispensaries in the several districts. The details are given in Appendix XXXI:—

DISTRICTS.	Number of dispensary.	INCOME FROM— Municipal grant.	District Board grant.	Government.	Private subscriptions, &c.	Total.	Expenditure.	TOTAL NUMBER TREATED. In-patients.	Out-patients.	Total.	Daily average number of in-patients.	Daily average number of out-patients.	Cost of diet per in-patient.	REMARKS.

There were 49 dispensaries against 50 in the preceding year. A new dispensary was opened at Haripur in Dinajpur, and the Kashimpur dispensary in Rajshahi ceased to exist. The Domer dispensary being a private institution, not under the supervision of the Civil Surgeon, has been excluded from the statement.

On the whole there was increase in the number of admissions of both indoor and outdoor patients. The increase was marked in Dinajpur, where altogether there were 26,752 admissions against 18,951. Nearly 4,000 of this increase was owing to the opening of a dispensary at Haripur. There was considerable increase in the number of admissions in the dispensaries of Alipur, Mainaguri and Falakata. The District Officer says that the increase may be attributed to European medicine being appreciated more and more by the inhabitants of the Duars. The increase in admissions in the Siliguri and Kalimpong dispensaries is chiefly due to the prevalence of disease.

In addition to the 12 dispensaries in the district of Rangpur named in Appendix XXXI, there are dispensaries at Govindganj and Dimla maintained by the Tagore Estate and the Raja of Dimla, and dispensaries at Domer and Jaldhaka supported by private contributions. There are also dispensarie at Saidpur and Kaunia maintained by the Railway. The District Officer of Pabna attributes the increase of admissions in his district to be owing to the general unhealthiness of the year.

A detached female hospital with a female doctor was added to the Sadar dispensary of Dinajpur. This hospital is on the separate cottage ward system with two wards for the poorer class and a receiving room. It has accommodation for 12 in the common ward and 6 in the cottages.

XXVIII.—LIBRARIES.

92. As stated in the reports of previous years, the number of public libraries in this Division is very limited, notably so in the large town of Dinajpur, where there is no institution of the kind. That at Rampur Boalia was maintained efficiently, and the Ananda Nath Library, with nearly 1,500 copies of valuable English books, has been amalgamated with it. Owing to this amalgamation the library accommodation has become very insufficient, and Kumar Promoda Nath Ray Bahadur, of Dighapatia, has made the very handsome donation of Rs. 3,481 for the addition of an upper storey to the existing library building. There are two public libraries in the district of Rangpur—one at the Sadar station and the other at Nilphamari. Both are maintained by public subscriptions. The public library in Bogra, which is also entirely supported by private subscriptions, is reported to be in good condition. [illegible]

[illegible] another at Serajganj, and the third at Porjona in the [illegible] division. They are reported to have been managed efficiently. An addition of books worth Rs. 91-2 was made to the Serajganj library. There is no public library of any importance in Jalpaiguri and Darjeeling.

XXIX.—MUSEUMS.

93. There are no museums in this Division.

XXX.—LOCAL SELF-GOVERNMENT INSTITUTIONS.

94. The average attendance at the important Committees was as follows in the several districts in this Division:—

Districts.	Names of Committees.	Number of members.									Number of meetings held.			Average attendance at each meeting.					
		Municipal Commissioners.			District and Local Boards.			Education Committee.						Municipal.		District and Local Boards.		Education	
		Elected.	Nominated.	Total.	Elected.	Nominated.	Total.	Official.	Non-official.	Total.	Municipal Committee.	District and Local Boards.	Education Committee.	Elected.	Nominated.	Elected.	Nominated.	Official.	Non-official.

(a) Official.
(b) Non-official. The figures shown in columns 6, 7, 8, 13, 17, 18 against Darjeeling refer to the District Road Cess Committee.

From the foregoing table it will be seen that there was a very little alteration in the number of meetings held by local bodies and in the average attendance at each meeting in comparison with those of the previous year. As little change can be noticed in the efficiency of these institutions. A general election of Municipal Commissioners, Chairmen and Vice-Chairmen took place during the year, and there was also a meeting to nominate by votes a member of the Lieutenant-Governor's Council. I was struck by the keenness with which technical objections to the results of such elections are pressed upon Government.

XXXI.—EMPLOYMENT OF MUMAMMADANS.

95. Appendix XXXII shows the offices held by Muhammadans in each district of this Division. As the form has been recast, the figures do not readily admit of comparison with those given in previous years. It would appear that 17·6 per cent. of the ministerial posts are held by Muhammadans against 16·6 in 1892-93, a small proportion in a Division where the majority are of that creed. The causes which have led to this result are well known.

XXXII.—POST OFFICE AND TELEGRAPH.

96. I have little to note under this head. A new imperial line extending over 12 miles was opened during the year from Joygunge to Gagra with a branch post office at Bahin. Of the Rs. 900 reported to have been misappropriated last year by the branch postmaster of Bangshihari, Rs. 300 have been received within the year of report by certificate. The accused is still at large, and no clue to his whereabouts is known. One new imperial post office was also opened at Lataguri near the Bengal Duars Railway station in Jalpaiguri. A currency note for Rs. 100 was alleged to have been abstracted during transit by post from a registered letter posted at Dhupguri for a post office in the Faridpur district. Enquiry in the matter is still going on. There was a case of fraud at the

Post Office.

Gaibanda sub-office. The officiating clerk committed suicide after misappropriating Rs. 165-2 from the value-payable parcels received by him. Steps have been taken for the recovery of the money. There was one case of defalcation of Rs. 195 in the Savings Bank branch by the schoolmaster in charge of Dhopadaha branch office in account with Dulai in the district of Pabna. The man was prosecuted by the Postal Department and punished under section 409 of the Indian Penal Code. On the whole the department worked satisfactorily.

Telegraph.

97. The Telegraph Department worked well during the year. Four new offices were opened at Darwani, Domar, Kalidaharghat and Saidpur in the district of Rangpur. A new combined post and telegraph office was opened at Bera in the district of Pabna in July 1893.

XXXIII.—ZAMINDARI DAK.

98. The following statement shows the demands and collections on account of the zamindari dák cess in the districts of the Rajshahi Division for the year 1893-94 :—

Districts.	Demand.			Excess payment made during the previous year.	Remissions.	Net demand.	Collections.								Balance (Column 7 minus 10)		
											Otherwise collected.						
	Current.	Arrear.	Total				Current.	Arrear.	Total.	Advance collection for next year.	Fines realised under section 9 of Act VII (B.C.) of 1862.	Miscellaneous receipts.	Total.	Total collections on all account.	Current.	Arrear.	Total.

Total ...	49,274	3,042	52,316	7,821	...	44,495	39,647	2,432	42,079	8,378	2,603	773	3,376	53,833	1,806	610	2,416
Total for 1892-93 ...	42,677	4,998	47,675	...	...	...	40,514	4,119	44,633	8,272	1,728	764	2,492	55,397	2,163	879	3,042

It will be seen from the foregoing table that the collections were very good in Dinajpur and Rangpur, fair in Rajshahi, Jalpaipuri, and Bogra, and bad in Pabna.

The following statement shows the expenditure and balance of the Zamindari Dâk Fund in the districts of the Rajshahi Division during the year 1893-94.—

Districts.	Collection on all accounts.	Balance in in hand from the previous year.	Total.	Expenditure.	Balance in hand.	Remarks.
1	2	3	4	5	6	7
	Rs.	Rs.	Rs.	Rs.	Rs.	
Rajshahi ...	8,427	3,970	12,397	9,941	2,456	
Dinajpur ...	14,305	3,702	18,007	9,277	8,730	
Jalpaiguri ...	5,267	6,133	11,400	3,869	7,531	
Rangpur ...	10,728	6,655	17,383	10,195	7,188	
Bogra ...	5,716	1,255	6,971	5,475	1,496	
Pabna ...	9,390	5,596	14,986	9,226	5,760	
Total ...	53,833	27,311	81,144	47,983	33,161	
Total for 1892-93	55,397	20,160	75,557	48,248	27,310	

The rates at which the cess was levied were as follow :—

	Rs.	A.	P.		Rs.	A.	P.
Rajshahi ...	1	0	0	Rangpur ...	1	0	0
Dinajpur ...	0	10	0	Bogra ...	1	4	0
Jalpaiguri ...	2	0	0	Pabna ...	2	4	0

These rates have been fixed by Government for the five years commencing from the 1st January 1893.

Fairs.

99. The most important fair in the Division is that held at Nekmurd in Dinajpur during the month of April. In regard to it the following statistics are furnished by the District Officer :—

Description of animals sold.	Number sold.		Total prices realised.		Average prices per head.	
	1892.	1893.	1892.	1893.	1892.	1893.
1	2	3	4	5	6	7
			Rs.	Rs.	Rs.	Rs.
Elephants	50	145	30,000	1,16,000	600	800
Camels	125	170	3,750	5,100	30	30
Oxen and cows ...	18,400	20,100	4,60,000	6,12,000	25	30
Buffaloes	100	1,000	1,500	20,000	15	20
Horses	1,100	1,675	33,000	67,000	30	40
Ponies, superior ...						
Ponies, small						
Sheep	115	150	1,380	2,250	12	15
Total ...	19,890	23,540	5,29,630	8,22,350	712	935

The following are the details of shops opened for sale :—

Description of articles.	Number of shops.	Value of articles offered for sale.	Value of articles sold.
1	2	3	4
		Rs.	Rs.
English cloth	212	1,12,000	75,500
Country do.			
Brass utensils	54	60,000	35,000
Spices, &c.	51	25,000	15,000
Ironware	26	8,000	5,000
Wood cart wheels, boxes, &c. ...	46	4,500	3,000
Articles of food, sweetmeats, &c.	144	32,650	18,500
Miscellaneous, including fancy articles, blankets, durries, &c.	409	1,60,400	72,700
Earthenware	35	2,000	1,500
Total ...	977	4,04,550	2,26,200
Total for 1892 ...	850	4,06,205	1,20 500

It is stated by the District Officer that "these statistics are collected by the police, and he cannot say how far they are reliable."

The only important fair in the district of Rajshahi is the one annually held at Khetur in thana Godagari. About 40,000 persons (male and female) are reported to have attended the fair. The Collector states that the number of persons who assembled at this fair during the previous year was

grossly under-estimated. He says from his personal experience that it approached 60,000.

As stated last year three fairs are held in the district of Jalpaiguri. The principal and the oldest one is the Jalpesh fair, which took its name from the idol Jalpeswar: it commenced on the "Sivaratri" festival, and lasted for three weeks. The collection of tolls amounted to Rs. 1,154-4 against Rs. 977-13-6 last year, and the expenditure incurred in its management (Rs. 125) was met from the Duars Market Fund. The Alipur fair, which was removed from the Santrabari to Alipur last year, commenced on the 10th January 1894, and lasted till 31st idem. It is stated by the Deputy Commissioner that the fair will be more successful if it be commenced in future from the 20th January, by which time the fair at Haldibari in the territory of Kuch Bihar breaks up. Out of Rs. 200 sanctioned by Government this year for the fair Rs. 129-9 were expended, and the public subscribed Rs. 58-2.

The Falakata fair was held from 10th February to 2nd March 1894. The Government grant of Rs. 300 was expended for erecting mêla booths, making conservancy arrangements, &c. No fees were levied either at Alipur or Falakata. These two fairs in the Duars are intended to encourage trade with Bhutan, as well as to bring within reach of the people articles which would not otherwise find their way to these remote parts.

There are no important fairs in Darjeeling. The agricultural show at Kalimpong was held on the 28th and 29th November 1893, at which about 4,000 persons assembled. A large number of articles were exhibited. The Deputy Commissioner presided at the opening of the show, which was attended by many visitors, European and others. The mêla has been held for the third time and showed a distinct advance of its predecessors. Rupees 200 were contributed by the Darjeeling Improvement Fund and Rs. 300 by Government. The receipts from subscription and other sources amounted to Rs. 1,444-4; Rs. 1,066-8 were paid for prizes.

Most of the fairs held in the districts of Bogra and Rangpur are unimportant.

No regular fairs were held in the district of Pabna. The "Basanta mêla" was held for the third time from the 2nd to 17th March 1894, at which specimens of agricultural produce as well as fancy goods locally available were exhibited.

Sanitary arrangements, where necessary, were made, and there was no outbreak of any disease in any of the fairs mentioned.

100. The following table shows the receipts and expenditure of ferries in the several districts in this Division:—

Ferri

Districts.	Authorities by whom managed.	Number of ferries farmed out.		Number of ferries managed direct.		Total.		Receipts from ferries farmed out.		Receipts from ferries managed direct.		Total receipts.		Total expenditure.	Remarks.

The ferries in the districts of Jalpaiguri and Dinajpur were, on the whole, well managed during the year. I am not satisfied that sufficient attention is given to the subject in the other districts. Ferries there are not, as a rule, served by platform boats, or provided with suitable approaches, even where the revenues admit of such conveniences. The tendency is to look on them too much as a means of raising revenue by taxing traffic, too little as public works of primary importance. I have often pointed out that where unbridged rivers have to be crossed the ferry is the most important part of the route, that to which the greatest attention should be paid. In Rajshahi one farmer was fined for levying excessive tolls. In Dinajpur there were six prosecutions by the District Board under the Ferry Act—two for establishing private ferries within two miles of public ferries and four for neglect of duties. In all these cases the accused was punished. The Deputy Commissioner of Darjeeling, Mr. Greer, reports that complaints were made against the farmer of the ferry over the Balasan river at the height of the working season. He was prosecuted, and the ferry was leased to another. The farming system has failed to operate satisfactorily at this place, and the ferry is now being worked under the order of the Deputy Magistrate of Siliguri. It is hoped that a bridge will be constructed at an early date, which will remove the causes of complaints. In my opinion there is a distinction very generally overlooked between farming the proceeds of a ferry and leaving to the farmer the duty of supplying the plant. The former is desirable, as it is impossible to check the account of receipts rendered by a salaried officer. The latter system is responsible for the unsuitable boats and defective approaches common in most districts. For a ferry a boat is required of special construction; and this can seldom be provided by a farmer, to whom it may become useless if his lease is not renewed. The District Board ought, I think, to supply the flat and farm out the right to use it.

Pounds.

101. The table given below shows the receipts and expenditure of pounds in the several districts in this Division:—

Districts.	Authorities by whom managed.	Number of pounds farmed out.		Number of pounds managed direct.		Total.		Receipts from pounds farmed out.		Receipts from pounds managed direct.		Total receipts.		Total expenditure.	Remarks.
		1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.	1893-94.

The pounds situated in municipalities are managed by the Municipal Commissioners and all others by the District Boards, except those in the district of Darjeeling, which are under the management of Government. Mr. Price, Magistrate-Collector of Rajshahi, writes:—

"Notwithstanding constant inspection by the Inspectors, and occasionally by the District Magistrate and Collector, it was often noticed that sufficient

food and water were not supplied to impounded cattle by the farmers. Cattle-pound farmers are as a rule a very bad set of people and give constant trouble. They fee people to bring cattle to the pounds. They overcharge on account of fees, and also on account of the feeding expenses of the impounded cattle. They refuse to give any or proper receipts and generally misbehave themselves."

In Rajshahi one pound farmer was found to have misappropriated an impounded cow, and on conviction was sentenced to six months' rigorous imprisonment. Another man was prosecuted for holding an unauthorised pound and levying unauthorised fines. He was fined by the Subdivisional Officer of Naugaon. Three other farmers were fined by the Chairman of the Boalia Local Board for not taking care of the cattle impounded.

In Dinajpur eight farmers were prosecuted for neglect of duties, of whom seven were punished and one discharged for want of sufficient evidence.

In my opinion the abuses incidental to the system of farming pounds, the improper seizure of animals to get the fees, overcharges, and the neglect of cattle impounded, are so great as to be more important than the fiscal considerations which are put forward in favour of its maintenance. On the old plan of salaried agents it was possible to secure respectable pound-keepers, and the checking of collections can be carried to a certain degree of perfection.

XXXIV.—SOCIAL AND POLITICAL INSTITUTIONS.

102. The following table shows the number of social and political institutions maintained in this Division during the year 1893-94:—

Districts.	Serial No.	Names of Institutions.	Remarks.
Rajshahi ...	1	Boalia Hindu Dharma Sabha.	Besides the institutions mentioned in column 3 there is a Brahmo Samaj in each district.
	2	Rajshahi Association.	
	3	Dinajpur Dharma Sabha.	
Dinajpur ...	4	Rate-payers' Association.	
	5	Branch Indian Association.	
	6	Branch Indian Association.	
	7	Rate-payers' Association.	
Jalpaiguri	8	Hindu Dharma Rakhini Sabha.	
	9	Duars Planters' Association.	
	10	The Darjeeling Tea Planters' Association.	
	11	The Terai Planters' Association.	
Darjeeling	12	The Darjeeling Association.	
	13	The Kurseong Association.	
	14	Dharma Sabha.	
	15	Muhammadan Association.	
Rangpur ...	16	Branch Committee of the Indian Association.	
	17	Nilphamari Sammilani Sabha	
	18	People's Association.	
Bogra ...	19	Standing Congress Committee.	

The Dinajpur Dharma Sabha is a religious institution supported by the members of the Hindu community. Hindu priests resort to it from different parts of the country and deliver lectures on Hindu religion. The names of the Darjeeling and Kurseong Associations were not mentioned by the Deputy Commissioner in his last year's report, though they had been in existence; nothing is reported to have been done by these two Associations. The Boalia Dharma Sabha provides for discussions on Hindu theology, recitation of Vedas, examination of students of Sanskirt tols, and conferring titles to successful candidates. In regard to the Rajshahi Association the Magistrate reports:—"The Bills introduced for the amendment of the Land Acquisition Act and the Bengal Municipal Act were hotly discussed, and many important suggestions were made by the various members of this respectable body composed of the *elite* of the district." The Darjeeling Planters' Association keeps a watch over matters affecting tea interests in the district and occasionally submits suggestions to the District Officer. Accordingly correspondence took place on the subject of

recruitment and charges incurred in proceedings in the Civil Court. The Terai Planters' Association came to notice with the Balasan ferry.

State of public feeling.

103. The European residents and the natives of English education have very clear views on most public subjects, which they take great care to impress on Government through their accredited organs. The opinions of these classes are uniform throughout Bengal, and certainly have no local colouring in this Division. The District Officers comment on the absence of public feeling of any kind among the people at large, by which phrase I mean to designate all those who have not received an English education. In this country the tendency is strong to make each occupation the speciality of a caste, and the impression gains ground that those who know English constitute a class having the exclusive right to hold all public offices, whether paid or honorary, and also to criticise public measures. Interference by others is regarded with the prejudice which attaches to encroachments on caste occupations, and it is seldom so conducted as to be altogether free from the ridicule which experts love to direct against inexperienced intruders on their ground. An exception is made in regard to religious matters; for judging of which from a Hindu, or even a Muhammadan point of view, it is felt that an education exclusively English confers no special advantage. A topic of this class came under general discussion during the year—the slaughter of kine. It interests everybody, and may at any moment lead to serious trouble. In this Division it is somewhat less dangerous than elsewhere, as the Muhammadans are in the majority, but the other party possesses considerable strength, and the utmost vigilance is necessary.

The public press: Its tone and

104. The subjoined table exhibits the newspapers published during the year:—

Districts.	Serial No.	Names of Newspapers.	How often published and in what language.
Rajshahi		*Hindu Ranjika* ...	Weekly, Bengali.
		...pa and *Krishi Patrika*	Fortnightly, ditto.
Dinajpur		*Dinajpur Masik Patrika*	Monthly, ditto.
Darjeeling		The *Darjeeling News*	Weekly, English.
		Masik Patrika	Monthly, Hindi.
		Darjeeling Standard	Weekly, English.
		Eastern Himalayan Mission, Darjeeling, Kalimpong and Sikkim News ...	Monthly, ditto.
Rangpur		*Rangpur Dik Prakash*	Weekly, Bengali.

No changes took place in the number of the newspapers published, and none of them has a wide circulation. This Division, with the obvious exception of the Darjeeling hills, is eminently a part of Bengal, and looks to Calcutta as its sole centre. The papers read by all classes are those which find favour in the capital, among which I may mention, as possessing a circulation among the native community, the *Hindu Patriot*, the *Statesman*, the *Indian Mirror*, the *Amrita Bazar Patrika*, the *Bengali*, the *Indian Nation*, the *Bangabasi*, and the *Sanjibani*.

XXXVI.—CONDUCT OF ZAMINDARS.

106. The remarks made by me under this head in my last annual report are applicable on the present occasion also. Monmohini Debi, of Puthia, has distinguished herself by sinking about thirty wells in different parts of the Rajshahi district, both in her own lands and elsewhere. They are made of masonry, and have proved very useful. In Dinajpur the Haripur zamindars and Rai Shetabchand opened two charitable dispensaries. His Highness the Maharaja of Kuch Bihar is again mentioned for his liberality, as also the Maharani Sarnamoyi and the Tagore family.

* * * * * * *

FORMATION OF VILLAGE UNIONS IN CERTAIN SELECTED RURAL AREAS IN BENGAL.

MUNICIPAL DEPARTMENT—LOCAL SELF-GOVERNMENT.

Calcutta, the 1st September 1894.

RESOLUTION—No. 3600L.S.G.

READ—

(1) Resolution No. 2803, dated the 11th December 1891, on the working of District and Local Boards in Bengal during 1890-91.

(2) Letter No. 8, dated the 2nd February 1892, from the Government of India, Home Department, regarding the organization of Union Committees in Bengal.

(3) Letter No. 6T.M, dated 28th April 1892, to the Government of India, Home Department, communicating the views of this Government in the matter.

(4) Letter No 3, dated 21st February 1894, from the Government of India, Home Department, regarding the formation of village Unions in certain selected and advanced rural areas in Bengal.

(5) Letter to Commissioners of the Burdwan, Presidency and Dacca Divisions, Nos. 873-5, dated the 11th March 1893, asking them to submit proposals in accordance with the orders of the Government of India.

(6) Letter from the Commissioners of the Burdwan, Presidency and Dacca Divisions, submitting their proposals.

IT was part of the original scheme of Local Self-Government for these Provinces, when the Bill for its introduction was under consideration, that village Unions should be the unit of administration, that Union Committees should be formed everywhere, and that the work of the Committees should be controlled by a central District Board. By the passing of the Bengal Act III of 1885, however, this part of the scheme was changed, the District Board became the unit of administration, with Local Boards in subordination to it, and the Union, instead of being the basis of the whole fabric, became an optional appendage of the Local Board. Objections were urged from many quarters to the establishment of Union Committees. The objections arose mostly out of the difficulty of obtaining competent men to fill the Committees and of giving them work to do which should satisfy their self-respect and call out their sense of responsibility. This again sprang from the smallness of the funds which could be placed in the hands of the Committees, a result which is due to the lightness of the local taxation in Bengal, the local (or Road and Public Works) cess being imposed at a much lower rate than that which exists in any other Province in India. It was mainly for these reasons that no further measures were taken for their introduction.

2. In his review of the administration of the District Boards in Bengal during 1890-91, the Lieutenant-Governor remarked that no Union Committees had been appointed, and that there was great divergence of opinion among officers as to the advisability of forming them. He did not himself anticipate that any immediate necessity would arise for appointing such Committees, and thought that it would be premature to take any step in that direction until the relations of District and Local Boards had been finally settled, and had stood the test of several years' experience. This view was not, however, accepted by the Government of India, who pointed out that the importance of the village organization as an essential element of success in sanitary improvement in rural areas had been recognized in other provinces; and although, in deference to the opinion of this Government, they did not press for the formation of Union Committees generally throughout the province, the question of establishing a few such Committees experimentally in selected and advanced rural areas, before deciding whether the system should or should not be more largely introduced, was commended to the consideration of the Lieutenant-Governor. The Commissioners of the Burdwan, Presidency, and Dacca Divisions were accordingly asked to submit proposals for the tentative and experimental introduction of the system in selected areas in those divisions, and their replies having been received, the Lieutenant-Governor is now in a position to issue orders on the subject.

3. It will be convenient in the first place to bring together and explain the various provisions of the Local Self-Government Act relating to Union Committees. Part I, Chapter II (sections 37-44) deals with their formation. Any village or group of villages may be constituted into a Union by a written order of the Lieutenant-Governor, and he may prescribe the number of members of which the Union Committee shall consist, such number not being less than

five or more than nine. The members will ordinarily be elected, and will remain in office for two years, but the Lieutenant-Governor may direct that the Committee shall consist wholly or in part of members appointed by the Commissioner.

4. The duties and powers of Union Committees are laid down in Part III, Chapter III of the Act (sections 104-119). Section 104 provides that "a Union Committee as the agent of, and subject to the control of, the Local Board shall, within the Union, have the control and administration of, and be responsible for, all matters specified in this chapter, except such of those matters as the Local Board may think fit to take under its direct control and administration." The matters consist of (*a*) the construction, repair and maintenance of village roads, (*b*) the repair and maintenance of portions of other roads lying within the Union Committee's jurisdiction which may be made over to it by the Local Board, (*c*) the charge of pounds, (*d*) the management of primary schools, (*e*) the charge of dispensaries, (*f*) the registration of vital statistics, and (*g*) sanitation, including drainage and water-supply. The Union Committee, it will be observed, is vested with powers in all these matters as the agent of the Local Board, and no power devolves on it in respect of those matters which have not been placed under the control and administration of the Local Board itself, with one exception. That exception is contained in section 118 of the Act, which empowers the Union Committee to levy a rate similar to that levied for the support of village chaukidars, for the purpose of cleaning or repairing public tanks, streams, well or drains within the Union. This useful provision will make it possible to procure funds for what has long been felt to be one of the most crying wants of rural Bengal—a pure water-supply for the villages in the interior, which cannot be provided with it under the Municipal law.

5. The Union Committee is to be placed in possession of means for carrying out its duties by the creation of a Union Fund, which will be composed of receipts from the following sources:—

(1) all sums accruing within the Union under the Cattle Trespass Act, 1871;

(2) all sums assigned by the Lieutenant-Governor or District Board, whether as a contribution towards the cost of making village roads, or otherwise;

(3) all other sums received by the Committee in the execution of the Act, including the rate leviable under section 118.

The Union Fund is applicable to the payment, first, of the establishment employed and expenses incurred for the purposes of the Act, and, next, of the expenses incurred in respect of the duties imposed and powers conferred in the matters specified above. Under section 36 of the Act the Committee cannot create an appointment with a monthly salary of ten rupees or more without the consent of the Local Board.

6. Provision for the control of Union Committees by the Local Boards is made in various sections of the Act. Section 103 provides that the Local Board shall exercise general powers of supervision and control over the Committee; section 130 confers on the Local Board, in respect of Union Committees, the power vested in the Commissioner of the Division and the Magistrate of the district of suspending the execution of any order or resolution of, or the doing of any act by, a local authority, if injury or annoyance to the public, or any class or body of persons, or a breach of the peace is likely to result, and also the power vested in the Magistrate of the district of providing in cases of emergency for the execution of any work or the doing of any act at the cost of the District Board; and section 58 requires the submission of quarterly and yearly accounts of the Union Fund to the Local Board.

7. The way for the creation of Union Committees has been facilitated by the intelligent use which some Magistrates have made of the powers conferred on them by section 4 of the amended Chaukidari Act, according to which they are able to prescribe what is to be called a village under the Act. The Magistrates in the Dacca Division, under Mr. Luttman-Johnson's guidance, have taken the lead in this measure, and in the Backergunge district Mr. Savage has grouped his people together in "villages" which on an average contain 1,000 houses, and are served by about 10 chaukidars with a jamadar of chaukidars over them. Such "villages," or several of them, when the circumstances are in other respects convenient would form suitable areas for the new Unions; and the fact that the taxation which it is proposed to levy

under section 118 conforms entirely to that under the Chaukidari Act, leads to the suggestion that the Chaukidari Panchayat should as far as possible be utilised as the nucleus of the Union Committee. Their appointment would be an inducement to the better class of residents to serve on the Panchayats, and thus tend to effect a much-needed improvement in the constitution of those bodies.
